Incident: BALDY

28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents):

Active

Backing

Group Torching

Short Crown Runs

Narrative:

Fire continues to back off Baldy Mountain. High loading of dead and down adds to intensity of fire. Fire activity continues through the night.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

Light Logging Slash

Timber (Litter and Understory)

Timber (Grass and Understory)

Narrative:

FM11 mimics heavy dead and down component with closed canopy. FMs TU5 and GS2 from LANDFIRE are being used for modeling.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

There are structures and a residence on the isolated private property to the north and in the community of Cedar Creek. To the south, southeast and southwest are critical Seattle City Light, Bonneville Power Authority (BPA) and PUD transmission lines and fiber optic lines.

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed

33. Life, Safety, and Health Status/Threat Remarks:

Currently fire is still on USFS, however, fire continues to move toward private inholdings with some structures. ICT2 is working with local authorities for preplanned evacuation procedures and contingency actions. For public safety, road closures are in effect for all FS 400 series roads off of Smackout, and Cedar Creek road past the last residence. An area closure on USFS lands that will include trails is effective 8/5/15. Hazards include snags and bug-weakened trees, steep terrain, limited safety zones, rolling debris, reburn potential and indirect fireline. Deliberate Risk Analysis completed, updated and approved.

35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern):

Moderating weather pattern will continue into Thursday. Warmer temperatures and lower RH expected for Friday only, then cooling for the weekend.

- 36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:
- 12 hours: Continued backing fire all flanks with 6 chains expected growth.
- 24 hours: Continued backing fire all flanks with 12 chains expected growth from current size.
- Fire expected to reach Cedar Creek on the northeast side, coinciding with the warm, dry day. Potential spotting could establish fire on the opposite slope.
- 72 hours: Backing fire reverses slope on all flanks, ROS to increase 10-times.

Anticipated after 72 hours: Backing fire reverses slope on all flanks, ROS to increase 10-times.

37. Strategic Objectives (define planned end-state for incident):

Utilize direct and indirect suppression tactics to engage fire where safely possible to minimize fire duration and long-term firefighter exposure. Use options that balance safety with the highest probability of success to reduce the risk of fire spread to private lands and residences, Cedar Creek community watershed, PUD and BPA transmission lines, and other FERC infrastructure.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and

Incident: BALDY

continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

Threat of escaped fire due to lack of anchor points, inaccessible terrain and lack of safety zones. Fire is burning 12 hours:

in heavy down and dead fuels.

24 hours: Threat of escaped fire due to lack of anchor points, inaccessible terrain and lack of safety zones. Fire is burning

in heavy down and dead fuels.

48 hours: Threat of escaped fire due to open fire line and lack of safety zones.

72 hours: Threat of escaped fire due to open fire line and lack of safety zones.

Anticipated after 72 hours: Continued threat until burnout operations are complete securing accessible portions of control lines.

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

12 hours: 1 Type 1 crew, Type 1 helicopter, Type 2 helicopter.

24 hours:

1 Type 1 crew, Type 1 helicopter, Type 2 helicopter.

48 hours:

1 Type 1 crew, Type 1 helicopter, Type 2 helicopter.

72 hours:

1 Type 1 crew, Type 1 helicopter, Type 2 helicopter.

Anticipated after 72 hours:

- 40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:
 - 1) critical resource needs identified above,
 - 2) the Incident Action Plan and management objectives and targets,
- 3) anticipated results.

Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.

Continued support with the Type 1, Type 2 IA crews and aviation resources will enhance our ability to progress establishing anchor points, prepping lines and burn-out operations.

41. Planned Actions for Next Operational Period:

Continue scouting areas for anchor points and line location. Monitor backing fire in Divisions A, M, and Q. Improve rightof-ways for contingency lines in Divisions Y and Z.

42. Projected Final Incident Size/Area (use unit label – e.g., "Acres", "Square Miles"): 1,500

43. Anticipated Incident Containment or Completion Date: 09/30/2015

44. Projected Significant Resource Demobilization Start Date:

45. Estimated Incident Costs to Date: \$1,000,000.00

46. Projected Final Incident Cost Estimate: \$6,300,000.00

47. Remarks (or continuation of any blocks above – list block number in notation):

Cost estimate information continues to be gathered and refined.

We are consistently having the Header tab revert to yesterday's information.

The T@IC is Brian Gales. This is a Type 2 incident and the current fire size is 390 acres.

Incident: BALDY
