INCIDENT MANAGEMENT TEAM

<b>Incident Objectives</b>	1. Incident Name <b>Horse Prairie</b>	2. Date Prepared 9/7/2017	3. Time Prepared 1000												
4. Operational Period (Date and Time) 9/7/2017                      1800 - 0600 <b>Night Shift</b>															
5. General Control Objectives for the Incident (include Alternatives)															
<ul style="list-style-type: none"> <li>a. Fight fire aggressively and safely; maintain LCES at all times.</li> <li>b. Minimize fire size primarily through the use of direct tactics and a staffed night shift where possible.</li> <li>c. Keep fire South of Olalla Creek, West of Doe Creek, North of Middle Creek, East of Union Creek</li> <li>d. Maintain and build positive relationships with impacted landowners, public, and cooperating agencies.</li> <li>e. Maintain strict financial records and fiscal and equipment accountability.</li> <li>f. Act in a respectful and professional manner around the community.</li> <li>g. Protect tribal, cultural, archeological, and sensitive plant sites by coordinating with Resource Advisors.</li> <li>h. Provide for initial attack and assistance as requested on new and emerging incidents.</li> </ul>															
6. Weather Forecast for Period															
See attached weather forecast															
7. General Safety Message															
<ul style="list-style-type: none"> <li>*Anticipate and look for changes in weather and fire behavior</li> <li>*Initiate all actions based on current and expected fire behavior</li> <li>*Communicate hazards and mitigation measures to all personnel</li> <li>*Stay hydrated</li> </ul>

# Fire Weather Forecast

FORECAST NO: 16  
PREDICTION FOR: Thursday Night Shift  
SHIFT DATE: September 7-8, 2017  
TIME AND DATE  
FORECAST ISSUED: 1300 September 7, 2017

NAME OF FIRE: Horse Prairie  
UNIT: Douglas Forest Protection Association  
Incident Meteorologist: Mary Wister  
Cell #: 240-778-5303

## Weather Discussion

**...Flash Flood Watch for the Burn Scar Areas through this Evening...  
...Marginal Risk of Severe Thunderstorms this Evening...**

As of 1300, showers and thunderstorms once again developed over southwest Oregon, and Horse Prairie got more rain than yesterday :) At the time of the submitted forecast, rain just began and exact rainfall amounts are unknown. There may be a few lingering showers or thunderstorms at the start of the night shift but will end around 8 PM. Clearing skies and areas of fog will occur overnight. RHs will be 100% in some areas.

## Thursday's Weather:

As of 1300...showers and thunderstorms. Moderate rain. WNW winds 3-6 mph. Temps: 60s. RH: 80-90 percent.

**\*\*\*Thunderstorms imply gusty and erratic winds\*\*\***

## Weather Forecast for Tonight:

Weather.....Mostly Cloudy. Isolated showers and thunderstorms before 2000. Areas of fog and smoke.  
Min Temperatures.....60-68.  
Max Humidity.....85-100 percent.  
Winds (20FT).....Downslope/downvalley 2-5 mph.  
Winds (Ridgetop).....North 3-8 mph.  
Haines Index.....3 (Very Low).  
CWR (> 0.25").....20% this evening. **LAL: 2...possibly 3.**

## Outlook For Friday:

Weather.....Mostly Cloudy. A slight chance of a shower.  
Max Temperatures....70-75.  
Min Humidity.....around 60 percent.  
Winds (20FT).....Upslope/Upvalley 2-5 mph. Winds East 3-6 along Cow Creek in Div S.  
Winds (Ridgetop).....Northeast 2-5 mph...becoming Northwest 4-8 mph in the afternoon.  
Haines Index.....3 (Very Low).  
CWR (>0.25").....0%. **LAL: 1**

## Extended Outlook for Saturday-Monday:

**SATURDAY**...Partly cloudy. Lows 55 to 60. Highs 75 to 80. Northwest winds 5 to 10 mph.  
**SUNDAY through MONDAY**...Mostly clear. Lows 50 to 60. Warmer with Highs in the 80s. North winds 5 to 10 mph. Gusts to 15 mph along ridgetops Sunday.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 12	<b>TYPE OF FIRE:</b> Wildland
<b>FIRE NAME:</b> Horse Prairie	<b>OPERATIONAL PERIOD:</b> Sept. 7, Night Shift
<b>DATE ISSUED:</b> Sept. 7, 2017	<b>TIME ISSUED:</b> 0900
<b>UNIT:</b> DFPA, Central Unit	<b>SIGNED:</b> <u>Mike Haasken</u> <i>MH</i>
	<b>Typed/printed:</b> Mike Haasken

### INPUTS

**WEATHER SUMMARY:** .DISCUSSION... Although rain amounts were less than 0.10" last night, some storms yesterday produced up to 0.50" in southern Oregon. The main low pressure system off the California coast will send additional surges of moisture and energy across the region today. These could develop thunderstorms capable of frequent lightning, heavy downpours, hail, and gusty outflow winds. For Horse Prairie and ICP, the thunderstorm threat will mainly occur between 1200-2000. Precipitation will taper off tonight. It will be cool with high RHs today. A warming and drying trend begins Saturday.

**TOPOGRAPHY:** Very steep ridge and valley topography with Table Mountain on the north and Cow Creek on the southeast part of the fire. Elevation ranges from 3,300' on Table Mountain to 800' in Cow Creek. Elevations increase above Cow Creek on the south end of the fire to 2,900'.

### OUTPUTS

#### FIRE BEHAVIOR

**GENERAL:** Fuels are timber ranging in age from new plantings to old growth with a brush and litter understory and also grass and brush fields. The old growth stands have numerous hazard trees. Fire Behavior during the first several days was extreme with running, crowning and spotting up to ½ mile. Some runs have been downhill with predominantly northerly winds. A rotating column with fire whirls was observed in late afternoon on the Div. T burnout several days ago. The burn period has been 24 hours. If the fire area receives a crown penetrating rain, lighter fuels will become too wet to burn, but the heavier fuels such as down logs, stumps, duff and snags will remain burnable.

**Forecasted Indices: For Late Afternoon, early evening before shift change. (Silver Butte RAWs)**

**1 hour fuel moisture:** 12% (+4); **10 hour fuel moisture:** 12% (+4); **100 hour fuel moisture:** 11% (+4); **1000 hour fuel moisture:** 10% (+1); **Live Woody Fuel Moisture:** 70(same); **Energy Release Component:** 53 (-12); **Probability of Ignition: Shaded due to smoke:** 20%; **Unshaded:** 30%

**Expected Fire Behavior:** Expect low rates of spread and flame lengths with isolated torching depending on rainfall.

**SPECIFIC:** Divisions Q,P,A,M,Y and T north: Minimal fire behavior, smoldering in heavy fuels.

**Division S & T South:** Possible active burning north end of Division along Cow Creek Road and south of Creek and in interior island in south end of Division S from recent burnout.

**AIR OPERATIONS:** Air operations may be hampered by heavy smoke and/or stormy weather. Sunset at Myrtle Creek is 7:39 PM tonight and sunrise tomorrow is 6:47 AM.

**SAFETY:** Lightning fires are started by strikes to ground that have a component called a continuing current. All positive discharges have a continuing current, and about 20% of negative discharges have one. Ignition depends on the duration of the current and the kind of fuel the lightning hits. Ignition in fuels with long and medium length needle cast, such as Ponderosa pine and Lodgepole pine, depend on the fuel moisture. Ignitions in short- needled species, such as Douglas fir depend far more on the depth of the duff layer than on the moisture. Spread of the fire after ignition usually depends on fuel moisture in all cases.

**8. MEDICAL EMERGENCY PROCEDURES**

**1. LINE EMERGENCY: Crew Supervisor to contact Division Supervisor with patient complaint/condition and 2 location.**

- Division Supervisor contacts:
  - Line EMT / PM
  - Communications Unit
- Communication Unit will clear command channel for emergency traffic
- Communications Unit contacts:
  - Medical Unit
  - Safety
  - Operations
- Division Supervisor will run medical emergency on command channel
- Medical Unit will:
  - Dispatch ground ambulance to nearest drop-point for ground transport only.
  - Or after patient pickup, dispatch ambulance to Helibase for Medical AIR EVAC Flight if needed
  - Notify receiving hospital of injury status.

**1. CAMP EMERGENCY: Contact Medical Unit with patient complaint/condition and location. Medical Staff will respond to stabilize incident:**

- Medical Unit contacts:
  - Communications
  - Safety
  - Logistics
  - Operations
  - Crew Supervisor

**7. INCIDENT COMMUNICATIONS:**

- Command: Channel #7
- Air to Ground: Channel #5

## Today's discussion is from the Hazard Tree Category.

### Hazard Trees – Situational Awareness

Snags (dead, standing trees without leaves or needles in the crowns) and green hazard trees present a significant threat to wildland firefighter safety. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw off embers creating spot fires in advance of the main fire. Snags may burn through more quickly than green trees and can fall without warning. Live, green trees weakened by insects, disease, weather, fire, and age presents another hazard and they can also fall without notice.

- The risk of serious injuries from hazard trees may increase during the night operational period when visibility is reduced.
- While work in cooler, nighttime environments can help control efforts, it also presents an increased risk from unseen falling snags and weakened live trees. Night operations should be restricted in areas of high risk rated dead and dying trees.
- Environmental conditions that increase risk from hazard trees: Strong or gusty winds from storm cells. Air operations - water or retardant drops, rotor wash from helicopters. Steep slopes with rolling material. Erosion and undercut root systems. Diseased or bug-killed areas (Mountain Pine Beetle).
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) in the area. Numerous downed trees/material. Broken tops and dead limbs overhead. Accumulation of downed limbs, tree decay, cavities, splits, cracks, lack of needles, bark, limbs or other indicators of overhead hazards. Roots damaged by equipment, fire or erosion create hazards.
- Mitigation measures to take: Identify and establish No-Work-Zones (NWZ) in all high-risk areas until the hazard has been mitigated. Instruct firefighters of established NWZ in briefings. Identify with flagging/signs, and show area on maps. Establish lookouts to protect NWZs. Assign only qualified sawyers and Falling Bosses. Order additional professional fallers in advance. Use heavy equipment, and blasters when appropriate. Plan a quick and safe escape routes. Do not turn your back on a falling tree or known hazard. Use lookouts to maintain secure felling areas. Maintain situational awareness.

## Safety Analysis of Tactical Actions (215A)

Incident Name: Horse Prairie				Date and Time Prepared: 9/7/2017				Operational Period: Night 9/7/2017							
TACTICAL HAZARDS	A/M/P			Q	S	T	Y	LCES MITIGATION							
	Indirect Fireline				X	X	X					Establish LCES. Insure that communications between lookouts and line resources are maintained. Escape Routes are identified and reevaluated continuously.			
Downhill Fireline				X	X	X					Follow downhill line standards. Bring fire with you. Insure lookout can see entire area. Identify safety zones and escape routes before starting work. Use page 9 of Incident Response Pocket Guide. Establish LCES.				
Underslung Fireline				X	X	X					Cup trench. Post lookout that can see all areas of under slung line. Establish LCES.				
Mid-Slope Fireline				X	X	X					Insure that lookouts can see ALL area of mid slope line as well as areas upslope of mid slope line. Establish Trigger Points and reassess as fire or weather conditions change. Establish LCES.				
Frontal Assault				X	X	X					Identify thresholds for reassessment. Establish LCES.				
No Anchor Points				X	X	X					Find/construct safe, effective anchor before engaging. Establish LCES.				
Extreme Conditions (Spotting, Wind)	X			X	X	X					High potential given because of low live fuel moisture and high probability of ignition. Anticipate. Identify thresholds for reassessment, monitor weather. Establish LCES.				
Heavy Equipment				X	X	X					Do not work down slope below heavy equipment. Establish communications with operator. Post lookout for rolling debris. Be aware of loose soil and rock. Establish LCES.				
Air Ops: Multi Aircraft				X	X	X					Insure that all personnel are at least 500 feet from bucket or retardant drops. Utilize air attack. Establish LCES.				
Hazard Trees/Snags	X			X	X	X	X				Assess, Identify, Communicate, Isolate, Mitigate. Establish LCES.				
Hazardous Materials											Utilize the Incident Response Pocket Guide. Identify and isolate any suspected hazardous materials. Notify supervisor and warn others in area. Keep your distance. Establish LCES.				
Unburned Area Unknown Fires	X			X	X	X	X				High potential for re-burn in brush and conifers preheated by earlier burn. Blowdown areas keep a close eye on. Post lookouts. Watch for increase in burn activity. Monitor weather for change in RH and or wind conditions. Establish LCES.				
Transportation	X			X	X	X	X				Drive defensively with headlights on, seatbelts fastened. Stay to the right side of the road. Yield to uphill traffic and flaggers. Drive slowly and watch out for the other person. Establish LCES.				
Communication	X			X	X	X	X				Establish LCES. Insure that communications between lookouts and line resources are maintained. Escape Routes are identified and reevaluated continuously.				
Steep Terrain Gravity Hazards	X			X	X	X	X				Do not work crews above or below each other. Post lookouts for rolling material. Watch footing in loose or wet soil and rock. Do not work below heavy equipment. Establish LCES.				
Environmental Hazards	X			X	X	X	X				Bees, Snakes, Bears and other animals are in the area. Carry medical kits for those with allergic reactions, do not harass or instigate any confrontations with animals, warn others of presence. Poison Oak - Preventative measures, locate, isolate, mitigate.				
Structures						X	X				Follow page(s) 12 - 16 of Incident Pocket Response Guide. Establish LCES.				
Transfer of Command											Make sure you understand your assignment. Know who your supervisor is and who is working for you. Do not assume. Re-brief all resources.				
Span of Control				X	X	X					Adhere to Span of Control Guidelines-5:1. Ensure Overhead is sufficient for operation and identify chain of command. Ensure everyone receives a briefing. Retain control at all times.				
Falling Operations	X			X	X	X	X				Post road guards. Have a falling boss who can be in contact with crews working in the area. Use qualified Fallers.				
Power Lines					X	X					Watch for down power lines and poles. Identify, isolate and report. Notify supervisor and warn others in area. Keep your distance.				
I.A.	X			X	X	X	X				Follow the 10 and 18, LCES - before engaging, re-evaluate for each new start!				
<b>Operations Section Chiefs:</b> Perkins				<b>Date / Time:</b> 9/7/2017 1130				<b>Safety Officers:</b> Carlsen				<b>Date / Time:</b> 9/7/2017			

# HEALTH AND SAFETY MESSAGE

*SAFETY* starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: Horse Prairie

DATE: September 7, 2017

Operation period: Night

## Major Hazards and Risks:

**Thunderstorm Safety**

**Shifting Winds**

**Cell Phones**

Fire Order of the Day – Keep informed on *Fire* weather conditions and forecasts

Stay Focused. Maintain your SITUATIONAL AWARENESS!! Do not become complacent.

From Lessons Learned Center: Rapid Lesson Sharing

**SPIDER BITES: 4 incidents in 10 days**

In the fall, spiders become more aggressive when they are getting ready to reproduce. Their venom is more potent. These spider bite incidents have all advanced to a serious level due to the time lapse between being bit and coming into the Medical Unit for treatment. Yes, we all know you don't want to be taken off the line working. All the more reason to get attention earlier. **DO NOT DELAY SEEKING TREATMENT!!**

### Encountering a Cougar:

1. Stay calm and stand your ground
2. Maintain direct eye contact
3. Back away slowly
4. Do not bend down or turn your back on the Cougar
5. Do not run! Running triggers a response in Cougars which could lead to an attack
6. Raise your voice and speak firmly
7. If the Cougar seems aggressive; raise your arms to make yourself look larger and clap your hands
8. If in the very unusual event that the cougar attacks you, fight back with sticks, rocks, tools or any other available items.

Cell Phones: House Bill 2597 clarifies that anything a driver could think of doing with a cell phone while driving is illegal. If a police officer sees the white glow of the screen illuminating a driver's face, even if the officer didn't see the driver talking or fingering the keys, the officer has witnessed a violation.

### **Thunderstorm Counter-Measures**

#### 30/30 rule:

- If you see lighting and hear thunderclaps within 30 seconds take storm counter measures-below.
- Do not resume work in exposed areas until 30 minutes after storm activity has passed.
- Take shelter in a vehicle.
- Find a low spot away from tall trees, utility lines.
- Move to area of shorter trees/plantation/clearcut
- Crouch low to ground, use pack to seat on, never lay on the ground.
- Make yourself the smallest possible target and minimize your contact with the ground.
- Don't group together.
- Try to avoid ridgetops, wide open areas, ledges, rocky outcrops.
- Keep from standing near or operating machinery (pumps, water tenders)
- Do not handle flammable materials.
- Use of handheld radios and cell phones are ok.
- Remain alert to unexpected weather changes.

Incident: Horse Prairie  
Thunderstorm Safety Plan  
September 6, 2017

In the event of a significant thunderstorm event affecting the Horse Prairie Incident, the following actions will be implemented:

1. The Safety Officer will address the safety concern at shift briefings, through safety messages, and informational sharing with Section Chiefs.
2. Thunderstorm safety guidelines from the IRPG page 21 and information from 6 Minutes for Safety Thunderstorm Safety handouts will be provided in camp and on the fire line.

**The 30/30 rule will be observed: If you see lightning, and hear the thunderclaps follow in less than 30 seconds, take the following storm precautions seriously.**

- A) **Take shelter in a vehicle. No suitable buildings/yerts are located at the ICP.**
  - B) **Do not group together.**
  - C) **Avoid seeking shelter beneath a tree.**
  - D) **Do not resume work in exposed areas until 30 minutes after storm activity has passed.**
3. The IMET will monitor the development of significant thunderstorm activity in the vicinity of the incident and the ICP.
  4. The IMET will request incident communications to make a radio announcement to fire line DIVS when the thunderstorm is approximately 30-60 minutes away from the incident or the ICP.

Section Chiefs at the ICP will be responsible for insuring this information is communicated to their subordinates and assigned resources.

## Working Around Inmates

Since 1951 The Oregon Department of Forestry (ODF) has utilized inmate labor to support wildland fire suppression efforts statewide. Standards have been established to protect the public and maintain order within the inmate work program. There is an expectation that security standards will not be compromised. This expectation extends to contractors, volunteers, and other agency and non-agency staff working on ODF managed fires.

You will recognize inmates by the orange stenciling on their clothing with the words "inmate" and the name of the institution that they came from. Inmates are rigorously screened before they are eligible for the work program. Violent crimes, sexual crimes, arson, and murder will keep an inmate from qualifying. Inmates working for ODF are typically highly motivated, trained, and look forward to learning new skills and giving back to local communities. They will not be left unsupervised or unaccounted for more than 30 minutes while on the fire line. While in fire camp, inmates are continuously supervised by DOC and ODF staff. It is ok to be friendly and speak with inmate workers, but here are some things you need to know:

- Inmates are not authorized to possess anything not provided by the Oregon Department of Forestry or Department of Corrections that is required for their work activity or sustenance. **Any items not issued by ODF or DOC is considered contraband.** Examples of contraband are cigarettes, chew, drugs, alcohol, firearms, non-stenciled clothing items, matches, lighters, sticks, animals, money, cell phones, or other people's items. Providing contraband to an inmate can in some cases result in a Class C, B, or A felony.
- Inmates should not be allowed access to computers, tablets, phones, fax machines, non-issued mobile radios, vehicle keys, facility keys etc.
- Enjoy light conversation with inmates but avoid sharing deeply personal information. Also do not engage in trying to solve an inmate's personal problems. Trained correctional counselors and security staff are hired to help inmates solve their problems. Feel free to express gratitude for the hard work that they do.
- Staff, contractors, and volunteers should not provide any type of gift or do any type of favor for an inmate. This includes making phone calls, mailing letters, post cards, emails, text messages or posting Facebook messages/pictures for inmates. Remember: **NO GIFTS, NO FAVORS.**
- Be aware of the Federal Prison Rape Elimination Act (PREA). It is a violation of Federal and State law to expose yourself to an inmate, engage in voyeurism, or have any sexual contact with an inmate. Professional boundaries are expected at all times. Sexual topics of discussion or jokes around inmates is inappropriate. Dress and act appropriately around inmates.
- Reporting- when you see an inmate acting strangely or doing/saying something that is clearly inappropriate do not hesitate to speak with the nearest Corrections Officer, or Forestry Crew boss.
- If an inmate is injured during the course of his duties, respond as you would for any other person and communicate with DOC security staff immediately thereafter.

When Inmates are working for the Oregon Department of Forestry they are learning technical skills, work ethic, problem solving skills and social skills that can help them become productive citizens when they are released. Please help us maintain a secure and positive inmate program by adhering to these policies and laws.

# HORSE PRAIRIE FIRE

## MOP UP STANDARDS

September 5<sup>th</sup>, 2017

Objective: The Horse Prairie Fire is to be mopped-up to a standard which the likelihood of the fire escaping the containment lines unlikely. The standards below can be flexible and should be applied based on physical conditions present, considerations for firefighter safety, and the expertise of the Incident Management Team (IMT) as long as the objective is achieved. These standards apply to all lands within the fire perimeter.

- Grid the green out to 300 feet from the fire perimeter for two burning periods
- Mop up 100% into hard black a minimum of 200 feet
- Mop up 100% all spot fires, in addition, a route to them will be flagged and the perimeter mapped in GIS
- Line unburned islands and drainages within 500 feet of the perimeter if they are not within the designated mop up area
- Mop up to 500 feet into hard black any dirty burn areas and areas of higher fuel concentrations. The decision to mop up this far into the fire will be based on the expertise of the IMT which is to consider fuels, aspect, wind exposure and firefighter safety
- Heat detecting equipment will be used to detect for hot spots within 200 feet of the perimeter including spot fires
- Complete felling of all snags and fire damaged trees that have been identified as a safety concern, have the potential to cause spotting outside control lines or is within 300 feet of major travel corridors, structures or railroad infrastructure.

## Resource Protection on BLM Lands Horse Prairie Fire

- Avoid application of retardant, foam or other chemicals to waterways unless the fire is deemed a threat to human safety or private property.
- Avoid use of dozers in riparian areas.
- Notify Resource Advisor of location if cultural artifact items are found. Remember, removing cultural artifacts is illegal.
- Locate fire lines to minimize directing water into waterbodies or wetlands.
- There are several Spotted Owl and Marbled Murrelet Nest sites near the current fire area. When planning suppression activities in older forests work with READ's to reduce impacts.
- If drafting out of Olalla Creek, Cow Creek, Union Creek or Doe Creeks use 3/32" screens on draft intake. Screening material and zip ties can be picked up at supply.
