Comments /notes on tonight's mission and this interpretation: <p>Tonight's mapping provides the initial perimeter for the Indian Creek Incident. Approximately 46 acres were mapped within the heat perimeter, all located on the east facing slope west of Eagle Creek south of Tunnel Falls and north of the 7 ½ mile campsite.</p> <p>The southern edge of the fire displayed some intense heat signatures while scattered heat was mapped along the eastern fire's edge towards the bottom of the toe of the slope.</p> <p>NOTE: Four heat signatures were detected outside within the scan box that do not appear to be directly related to the Indian Creek Incident. Two of these are in close proximity to trails or marked campsites, making them likely campfires while the other two do not appear to be associated with an identifiable road or trail. All four were mapped, with lat/longs generated on the provided map.</p> <p>They were located at:</p> <p>45° 35' 19.40" N 121° 51' 42.87" W 45° 33' 33.85" N 121° 51' 12.37" W 45° 34' 54.88" N 121° 49' 17.78" W 45° 35' 56.46" N 121° 52' 2.24" W</p>
