<b>Comments /notes on tonight's mission and this interpretation:</b> Tonight's mapping use the 7/23 IR heat perimeter as a base for mapping. Perimeter growth was mapped along the southern edge of the fire where the perimeter has moved 1/10 <sup>th</sup> of a mile since the most recent IR perimeter. Pockets of scattered heat were mapped along the southern and southwestern edges of the fire. No fire was detected north or east of Eagle Creek. No intense heat was mapped this shift.
