Comments /notes on tonight's mission and this interpretation: Tonight's mapping began with the previous night's IR heat perimeter as a starting point. Abney (Miller Complex): Growth was generally limited tonight, primarily in the area of Dutch Creek. NOTE: the fire has crossed Dutch Creek to the northeast below the 1065 road and intense heat was mapped on the southwest facing slope north of the creek. Intense heat was mapped along the fire's edge in the Dutch Creek drainage and north of White Mountain. Scattered heat was also found along the perimeter in the Dutch Creek area and north of Black Mountain and White Mountain. No growth occurred in the Whisky Creek drainage, though scattered and isolated heat remains here. Isolated heat continues to persist throughout much of the fire area. Knox: no heat detected. (Eclipse Complex) Cedar: Only a partial scan on Cedar was conducted, and no growth was detected tonight with only one isolated heat source mapped.
