WEATHER SUMMARY: See attached forecast

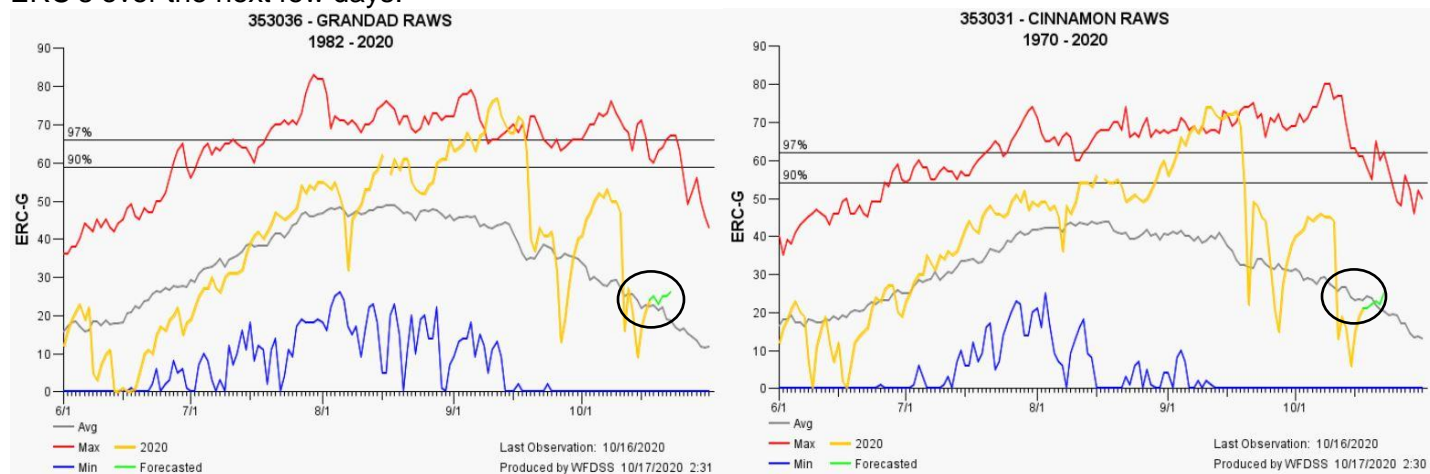

OUTPUTS

FIRE BEHAVIOR

GENERAL: Continued moderate weather with temps near or slightly above average for this time of year. Fuel moistures will vary little over the next 3 days. 1-hr and 10-hr time lag dead fuels will be receptive to ignition for a few hours in the afternoon on southern aspects with limited shading. Still expect minimal smoldering fire behavior due to the effects of past precipitation. Larger logs, snags, stumps and woody debris (mega chunks) will continue to smolder with occasional small open flame. There will continue to be visible smokes.

For North Umpqua, daily NFDRS observations and forecast indices that include fuel moistures and ERC can be found at the following link: <http://www.orrcc.org/files/fds spreadsheet.pdf>

Archie Creek: Monday-Wednesday. Forecasted 1-hour fuel moistures minimums will be near 8% and 10- hour fuels near 8%, 1000- hour fuel moistures near 21%. ERC-G values will be close to average for this time of year. ERC chart for Granddad RAWs – located several miles NE of Archie Creek Fire indicates minor increase in ERC's over the next few days.

Thielsen: Monday-Wednesday. Forecasted 1-hour fuels moistures minimums will be near 6% and 10-hour fuels moistures will be near 10%, 1000-hour fuel moistures will be near 22%. ERC-G values will continue to be close to average for this time of year. Cinnamon RAWs – located a few miles north of the fire indicated minor increases in ERC's the next few days.

Safety

While in or near the fire edge, continue to pay attentions to overhead hazards including fire weakened green trees and snags. Also watch out for ash pits, especially near burned landings.

Continue to monitor weather and fuel conditions to maintain Situational Awareness.

Although the area is losing about 2.5 minutes/day of daylight, smokes will still be visible.
