ARCHIE CREEK	Date/Time From: 09/29/2020 0630 TUE	Date/Time To: 09/29/2020 2000 TUE
<b>3. Objective(s):</b>		
<p>1. Strategic suppression objectives are to minimize acres burned on private lands and O&amp;C lands managed by BLM. On Umpqua National Forest ownership, suppress the fire in the most efficient manner while maintaining a high probability of success protecting identified values.</p> <p>2. Tactical objectives will fit with strategic objectives for land ownership and will be based on effective and timely risk management and probability of success. Base all tactics on acceptable risk commensurate with values at risk.</p> <p>3. Values are first and foremost life, including responders and the public. Value priorities in order are:</p> <ul style="list-style-type: none"> <li>• responder and public safety,</li> <li>• private land values and community infrastructure,</li> <li>• improvements,</li> <li>• cultural and natural resources.</li> </ul> <p>4. Follow guidelines to minimize exposure of yourself and those you interact with from the Covid-19 virus. This generally includes daily monitoring, social distancing, hand washing, and wear masks when necessary.</p> <p>5. Provide timely information to the public, cooperators, local community, and host agency. Maintain or improve community and visitor relations through positive communications.</p> <p>6. Provide initial attack within the TFR.</p>		
<b>4. Operational Period Command Emphasis:</b>		
<p>COVID mitigations. Take advantage of higher fuel moistures and rainfall affects.</p>

FINAL

To: All Incident Personnel, Archie Creek 2020

As Southern Area National Type I Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

I am particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

/s/ Mike Dueitt

# FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 20	<b>TYPE OF FIRE:</b> Wildland
<b>FIRE NAME:</b> Archie Creek	<b>OPERATIONAL PERIOD:</b> Day Shift
<b>DATE ISSUED:</b> 9/28/2020 <b>TIME ISSUED:</b> 1300	<b>SHIFT DATE:</b> Tuesday, September 29, 2020
<b>UNIT:</b> Umpqua NF	<b>SIGNED:</b> Greg Titus, FBAN

## WEATHER SUMMARY:

See weather forecast in IAP for detailed forecast.

### Local Thresholds for Elevated Fire Behavior– Watch Outs

**20-foot winds > 13 mph, RH under 25%, Temperature over 85°, 1,000-hour fuel moisture less than 12%.**

## FIRE BEHAVIOR:

### GENERAL:

One- and ten-hour fuels will become receptive to ignition. One-hour fuels will range from 4% in exposed locations to 7% in sheltered locations. Ten-hour fuels will be < 9%.

Fire behavior will be **minimal** today. No active fire spread is expected. **Smoldering** in stumps, snags, and downed heavy fuels will continue. **Creeping** fire may be found in needle/leaf drop that are adjacent to the smoldering heat sources. **Running** fire may occur if fire finds its way into previously unburned pockets. Torching is possible. No fire perimeter growth is expected.

If fire starts outside containment lines expect moderate running fire with occasional torching.

ERC's are slightly below average.

Rate of spread and flame lengths are model outputs based on **maximum values** for the fuel models shown, with current fuel moistures in exposed locations on steep slope.

Fuel Model	Rate of Spread	Flame Length
Grass/Shrub (GS2)	15 chains/hour 17 feet/min	6 feet
Mature Timber (TU2 & TL5)	7 chains/hour 8 feet/min	4 feet

In **one hour** a spot fire would be approximately **2 acres** in timber and **6 acres** in grass/shrub.  
Probability of Ignition = **71%**

### Specific Areas of Concern:

#### **All Divisions:**

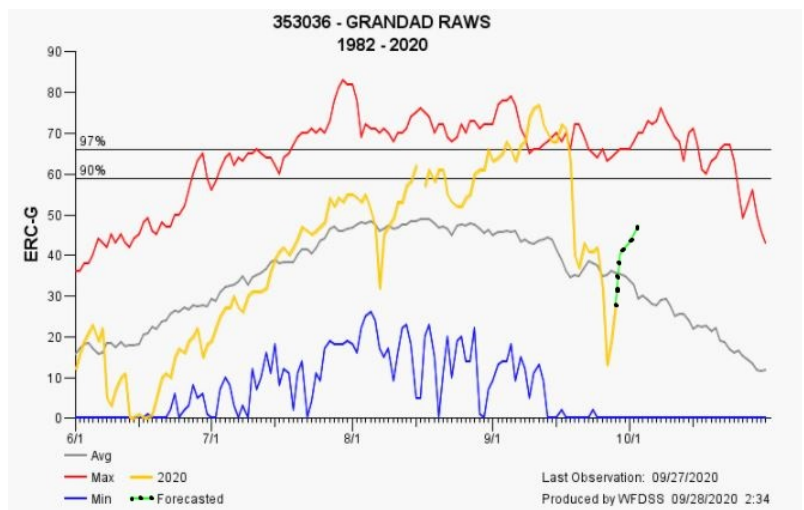

Be vigilant to any areas that are showing heat near control lines. Look for smoke or white ash that has shown up since the last rain event. Use the back of your bare hand close to but not in contact with potential heat source to test for heat.

**AIR OPERATIONS:** No concerns for Air Operations.

### SAFETY:

As fuels respond to the hot and dry weather ERC values are predicted to rise over the next week. ERC values will go above average in the next few days

As these fuels dry, they will become more receptive and become more active. Expect increased smoke production and the possibility of active fire.

## HEALTH AND SAFETY MESSAGE

*“We don’t plan on luck to be safe, we plan on sound risk management and good decisions.”  
~ The Red Team*

<b>INCIDENT:</b> Archie Creek & Thielsen Fire	<b>DATE:</b> Tuesday September 29, 2020
<b>Major Hazards &amp; Risks:</b> <i>Weather, Heavy Equipment, Falling Snags, Powerlines</i>	
<p><b>Weather:</b> Be aware of Lower Relative Humidity’s, Higher Temperatures trending this week</p> <p><b>Heavy Equipment:</b> There is a lot of heavy equipment on both the Archie Creek &amp; Thielsen Fire and likely more to come for suppression repair, and fuels reduction. With that brings large transports needed to move the equipment into and around the fire. You can help reduce the possibility of having an accident by driving slowly, stay alert and drive defensively. When you park in these areas make sure your vehicle does not block the travel way on these roads. If you are a passenger while the driver is backing <b>offer to get out and be a spotter</b>. These are certainly accidents that can be prevented.</p> <p><b>Falling Snags:</b> In addition to the heavy equipment, there will be fallers along interior roads to fell hazard trees. Fallers make sure you have road guards before felling trees along roadways.</p> <p><b>Chippers:</b> It is important that all resources working with the chipper be briefed on safe working practices and sign the JHA for chipper operation before using the chipper. The operator of the chipper must be trained and qualified. The operator should be the owner or employee of the chipper contractor.</p> <p><b>Powerline:</b> Always treat downed powerlines as if they are LIVE wires. Refer to Powerline Safety in the (IRPG) <b>Incident Response Pocket Guide</b> pages 24 &amp; 25.</p>	

*Thank you for your time and consideration  
Archie Creek and Thielsen Fire Safety Officers: Larry Connell, Tommy Hawkins, Troy Floyd,  
Steve Gray, Gary Kemp, Chad Hyatt, and Brad Lidell*

## Daily COVID-19 Reminder

- **“MODULE OF ONE” Concept:** Resources assigned to the Archie Fire need to focus on reducing the amount of time they spend around other resources they do not need to directly work with. Please limit your exposure to other resources.
- **Cloth face coverings (MASKS):** All individuals must wear a mask when they are working in close quarters outside their “Module of One.”
  - Masks must cover your mouth and nose.
  - Lightly used medical masks are okay.
  - Supply has medical masks for distribution.
  - Masks need to be worn inside ICP buildings, and when social distancing is not practical (supply, ground support, briefing areas).
- **Hygiene:** All resources need to wash their hands before and after touching common items around camp.
- **Douglas County Community:** Please ensure that resources are following the above when they are visiting local area business.
- **Wildland Fire COVID-19 Screening Tool:** Apply the screening tool to yourself and any crew members you are responsible for.

If you have questions or concerns, please contact the Red Team COVID Coordinator  
Birk Roseman 850-363-7214 / [birk.roseman@usda.gov](mailto:birk.roseman@usda.gov)

# The Power of the Humble Raindrop

Erosion starts with a single raindrop.

Individual raindrops can travel at speeds up to 20 miles per hour. When raindrops strike soil directly, without any plant cover or woody debris to intercept the drop's kinetic energy, soil particles can splash up to five feet horizontally and two feet in the air. This is known as splash erosion.

The volume of soil material detached by raindrop splash is determined by raindrop diameter (larger drops are heavier and have more kinetic energy), median grain size of the soil, and slope. A sloped surface will result in more soil particles splashing downhill, and these particles will move at higher velocities.

Eventually the soil may become saturated and water will start to flow over the soil surface as sheet flow. Soil loosened by the action of splash erosion may then be moved off site by sheet erosion. As water moves downhill, it may concentrate and form rills and eventually gullies.

**Much of what we do during Suppression Repair are actions to mitigate future erosion events on suppression lines. Pulling coarse woody debris onto suppression lines and mulching with straw and hay help intercept the kinetic energy of raindrops. Seeding native species provides soil cover in future years and stabilizes the soil through root development. Waterbars help intercept and diffuse sheet flow before it can lead to rilling.**

***Thank you for your help with this important work!***

*Fun fact: The total energy for 30 inches of annual precipitation occurring over 1 square mile is equivalent to the energy of 8,256 tons of TNT.*
