To: All Incident Personnel, Archie Creek 2020

As Southern Area National Type I Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

I am particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

/s/ Mike Dueitt

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 09	TYPE OF FIRE: Wildland
FIRE NAME: Archie Creek	OPERATIONAL PERIOD: Day Shift
DATE ISSUED: 9/17/2020 TIME ISSUED: 1500	SHIFT DATE: Friday, September 18, 2020
UNIT: Umpqua NF	SIGNED: Greg Titus, FBAN & Mike Ward, FBAN (t)

WEATHER SUMMARY:

Wetting rain & isolated thunderstorms expected today thru Saturday AM. See weather forecast in IAP for detailed forecast.

Local Thresholds – Watch Out

20-foot winds over 13 mph, RH under 25%, Temperature over 85°, 1,000-hour fuel moisture less than 12%.

FIRE BEHAVIOR:

GENERAL: The Archie Creek Fire is in the North Umpqua River drainage which includes Rock Creek. The lowest elevation is in the area of Glide, OR at 700 ft. and highest is around 4,200 ft. at Mt. Scott and other peaks further east. Terrain is the gentlest in the Glide area with 20-30% slopes and becoming much more rugged up drainage to the east with slopes 40-50%. Fuels types range from grass, oak lands in the Glide area to heavy timber to the east.

Fine Dead Fuel Moisture = 8%, 1,000 Hour Fuel Moisture = 12%, Live Fuel Moisture = 70%
Live fuels are nearly cured and very volatile.

ERC's are above the 97th percentile at or near record highs for all RAWs in the fire area on Thursday. ERC values are expected to fall below the average level due to the predicted rain. However, they will quickly recover, after the rain event, due to the extended drying. Last wetting rain was mid-June, three months ago.

Rate of spread and flame lengths based on areas that are heavily sheltered or did not receive rain. Exposed grass and shrub fuels are very unlikely to carry fire this operational period.

Fuel Model	Rate of Spread	Flame Length
Grass/Shrub (GS2)	3 feet/minute	1 foot
Mature Timber (TU2)	9 feet/minute	7 feet

New spot fires can reach 3 acres in one hour in sheltered fuels.

Probability of Ignition = 31%

Specific Areas of Concern:

Branch I

Division S - The area near Emile creek and the Little River is of most concern, the burn period, if any, will be much shorter today. Spread potential is low.

Branch II

Division E & F – The main heat is centered around the E & F division break. Favorable weather conditions will moderate any spread potential.

Branch III

Division H – There is still considerable along most of the Division, the highest concentration near DP 42. Minimal spread is expected.

Division N – The main area of concern is along the Panther Creek road. A fuel change due to the 2002 Apple fire will moderate fire behavior due to the higher fine fuel moistures. This affect will be short lived as fuels dry following the rain event.

AIR OPERATIONS: Rain and thunderstorms could make for challenging Air Operations.

SAFETY: While significant fire growth should not be a concern this operational period, even a small fire in hazardous materials can be dangerous. Common chemicals used around the home may be a direct hazard due to flammability, explosion potential and/or vapors. Such chemicals include paint, varnish and other flammable liquids; fertilizer; pesticides; cleansers; aerosol cans, fireworks, batteries and ammunition. Common household products such as plastics may give off very toxic fumes when they burn. Stay out of the smoke from burning structures and any unknown sources such as trash piles.

HEALTH AND SAFETY MESSAGE

*“We don’t plan on luck to be safe, we plan on sound risk management and good decisions.”
~ The Red Team*

INCIDENT: Archie Creek Wildfire	DATE: Friday September 18, 2020
Major Hazards & Risks: <i>FOCUS on</i> → Dutch Creek Protocols & Transition	

Dutch Creek Incident lessons learned

A firefighter was struck by an eight-foot long by 20-inch diameter section of a sugar pine tree during a hazard tree mitigation falling operation. Approximately three hours later, he is hoisted into a medevac helicopter. 3 hours 26 minutes pass from the time of the accident to the young firefighter being pronounced dead due to loss of blood from a shattered femur and severed blood vessels. This tragedy, known as the “Dutch Creek Incident”, becomes a red flag that we need to better plan and prepare for injuries on the fireline.

- The emergency medical procedures outlined in the 2018 Incident Response Pocket Guide (IRPG) page 2 (green pages, Operational Engagement) are part of the Dutch Creek Serious Accident Investigation Report Response and were developed by a team created by NWCG
- To help you effectively report a medical incident from the field, the pink pages Medical Incident Report (Pink pages, Emergency Medical Care) of your IRPG. This is commonly called the “8 line” and included in the Archie Creek IAP (ICS 206 WF)
- This straightforward eight-step process provides a standardized checklist to follow during a rapidly emerging medical incident. **Review & Practice this process with your crew/team.**

The Southern Area Red Team conducts practice emergencies under our Incident Within and Incident (IWI) team protocol.

Transition

The Southern Area Red Team assumed command of the Incident on September 18th at 0600. Working closely with NW Team 9 they have developed Strategy and tactics which we all need to pay close attention too. There are new personnel in key leadership positions. Know who you work for and the adjacent forces and/or task groups.

Before you engage ensure a proper briefing which includes The task, purpose, and end state. The suppression strategy includes a risk assessment which compares hazards vs. mitigation to reduce the hazard to safe margins IF we abide by them. *The back cover of the IRPG has a template that’ll help with those initial briefings and ensure a smooth transition.*

Watch Out Situation of the Day: #5 – Uninformed on Strategy, Tactics, and Hazards

Daily COVID-19 Reminder

- **“MODULE OF ONE” Concept:** Resources assigned to the Archie Creek Fire need to focus on reducing the amount of time they spend around other resources they do not need to directly work with. Please limit your exposure to other resources.
- **Cloth face coverings (MASKS):** All individuals must wear a mask when they are working in close quarters outside their “Module of One.”
 - Masks must cover your mouth and nose.
 - Lightly used medical masks are okay.
 - Supply has medical masks for distribution.
 - Masks need to be worn inside ICP buildings, and when social distancing is not practical (supply, ground support, briefing areas).
- **Hygiene:** All resources need to wash their hands before and after touching common items around camp.
- **Douglas County Community:** Please ensure that resources are following the above when they are visiting local area business.
- **Wildland Fire COVID-19 Screening Tool:** Apply the screening tool to yourself and any crew members you are responsible for.
