To: All Incident Personnel, Archie Creek 2020

As Southern Area National Type I Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

I am particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

/s/ Mike Dueitt

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 17	<b>TYPE OF FIRE:</b> Wildland
<b>FIRE NAME:</b> Archie Creek	<b>OPERATIONAL PERIOD:</b> Day Shift
<b>DATE ISSUED:</b> 9/25/2020 <b>TIME ISSUED:</b> 1300	<b>SHIFT DATE:</b> Saturday, September 26, 2020
<b>UNIT:</b> Umpqua NF	<b>SIGNED:</b> Greg Titus, FBAN & Mike Ward, FBAN (t)

### WEATHER SUMMARY:

See weather forecast in IAP for detailed forecast.

### Local Thresholds for Elevated Fire Behavior– Watch Out

20-foot winds > 13 mph, RH under 25%, Temperature over 85°, 1,000-hour fuel moisture less than 12%.

### FIRE BEHAVIOR:

#### GENERAL:

Fire behavior will be **minimal** today due to the overnight rainfall. No active fire spread is expected. Some **creeping** fire may be found in previously unburned fuels and needle/leaf drop. **Smoldering** in stumps, snags, and downed heavy fuels may continue. No expected fire perimeter growth.

ERC's are below average for this time of year. ERC values have drop considerably due to the recent rain events. ERC values may rise over the next two days but are not expected to reach critical levels. Early next week may show a significant rise in ERC levels.

Rate of spread and flame lengths are model outputs based on **maximum values** for the fuel models shown, with current fuel moistures in exposed locations on steep slope.

Fuel Model	Rate of Spread	Flame Length
Grass/Shrub (GS2)	< 7 chains/hour < 8 feet/min	2 feet
Mature Timber (TU2 & TL5)	< 5 chains/hour < 6 feet/min	1 feet

In **one hour** a spot fire would be less than **3 acres**.

Probability of Ignition = **34%**

#### Specific Areas of Concern:

No areas of special concern today. All areas of the fire will be subdued due to the overnight rainfall.

**AIR OPERATIONS:** Cloud cover could affect Air Operations.

#### SAFETY:

### “Smoldering, Creeping” What do they mean?

There are standard descriptions for different kinds of fire behavior. These standard descriptions help folks have a common understanding of what the fire is doing. Accurately communicating what the fire is doing is critical

### Standard Order #2: Know what your fire is doing at all times.

**Smoldering:** No open flames in the surface fuels. White smoke. Smoldering ground fire.

**Creeping:** Visible open flame, 1-4 ft. in surface fuels. Surface fire only. Unorganized flame front. Little or no spread.

Follow the QR code below to link to more information about other fire behavior descriptions.

There are other standard descriptions of fire behavior. Use the QR code to find more information about fire behavior descriptions.

# HEALTH AND SAFETY MESSAGE

*“We don’t plan on luck to be safe, we plan on sound risk management and good decisions.”  
~ The Red Team*

**INCIDENT:** Archie Creek Wildfire      **DATE:** Saturday September 26, 2020

**Major Hazards & Risks:**      ***Communications, Hazard Trees***

**COMMUNICATIONS:** Terrain and distance cause communication issues on the incident, even on command frequencies. Scan all command and air-to-ground frequencies, especially for medical emergencies. Know the tactical and command frequencies assigned to your division, especially if you are in a new location. *To reduce confusion, ask questions and repeat mission orders.*

**HAZARD TREES:** Hard hats are good protection from falling cones, small branches and tools, but they won’t stop a 36 inch (DBH) Douglas Fir. Take the time to scout your work area and identify hazardous trees. They come in a variety of forms – dead, live, burned and scarred. Flag, remove or avoid working around them. *Every tree will fall at some time...is today the day?*

## WEEKEND WATCHOUT

## ROAD SAFETY

Pull off the road to a safe location.

If working along road for fire, suppression repair or medical emergency, wear a high visibility vest.

Request traffic control (law enforcement) through Archie Communications.

Consider immediate needs to keep traffic from hitting victims or creating additional emergencies.

## Daily COVID-19 Reminder

- **“MODULE OF ONE” Concept:** Resources assigned to the Archie Fire need to focus on reducing the amount of time they spend around other resources they do not need to directly work with. Please limit your exposure to other resources.
- **Cloth face coverings (MASKS):** All individuals must wear a mask when they are working in close quarters outside their “Module of One.”
  - Masks must cover your mouth and nose.
  - Lightly used medical masks are okay.
  - Supply has medical masks for distribution.
  - Masks need to be worn inside ICP buildings, and when social distancing is not practical (supply, ground support, briefing areas).
- **Hygiene:** All resources need to wash their hands before and after touching common items around camp.
- **Douglas County Community:** Please ensure that resources are following the above when they are visiting local area business.
- **Wildland Fire COVID-19 Screening Tool:** Apply the screening tool to yourself and any crew members you are responsible for.

If you have questions or concerns, please contact the Red Team COVID Coordinator

# Weed Wash

Weed washes is up and running! The purpose of weed wash is to prevent the spread of invasive plants throughout the incident by removing their seeds.

## Please visit the weed wash at ICP

Several of you have already been working on the line, and in that case, we ask that you wash your vehicles in the following situations:

1. Initial mobilization into camp
2. Final demobilization
3. Moving from Branch I to Branch II and III, or from BLM to FS
4. As often as possible

\*Federal agencies and industry spend thousands of dollars a year in the fight against noxious weeds as they spread from the valleys (or other infested areas) into uninfested Public Lands and plantations. Prevention is by far the most effective and proactive weapon we have as it saves taxpayer dollars and takes little extra time to accomplish.

# Suppression Repair 101

## Constructing Effective Waterbars

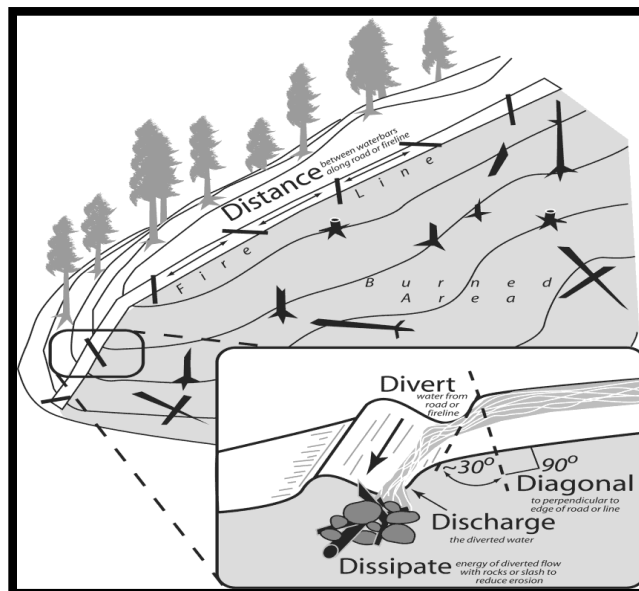

Who doesn't love Suppression Repair? Admittedly, it might not be as exciting as initial attack, but the reality is it is extremely important – our actions during the repair stage set the areas impacted by suppression efforts on a trajectory to heal more quickly than if left alone. Sure, nature is pretty good at healing from all sorts of disturbance, but our actions act like a catalyst....we can help speed up the recovery.

One of the most crucial things we do during Suppression Repair is construct waterbars on firelines. The purpose of a water bar is to slow water down as it travels downhill. When constructed correctly, waterbars help reduce rilling, excessive erosion, and mitigate sediment transfer to streams and rivers.

**There are two types of waterbars; effective and ineffective. An effective waterbar has 5 main characteristics (see Figure 1);**

- **Distance** – distance between waterbars is adequate for the slope – not too close, and not too far apart.
- **Divert** – the waterbar is effectively anchored into the uphill side so that water is funneled into the waterbar, and not over the top of the waterbar berm.
- **Diagonal** – the waterbar angle does not exceed 45 degrees – waterbars exceeding 45 degrees will not slow the water down.
- **Discharge** – the waterbar is deep enough to ensure there are no barriers, and the water is effectively delivered to the green filter at the end of the waterbar.
- **Dissipate** – the water is dissipated, or filtered, through the green filter at the end of the waterbar. This slows the runoff down and reduces erosion resulting from the energy flow of moving water.
