The estimate does not include the time it might take to get critical care resources to the injured employee or the time to stabilize and package the employee for transportation.

The travel time estimate is from the moment a litter is lifted off the ground and travel begins.

The estimate does not address the fitness of the litter crew and their ability to maintain a constant rate of travel.

It assumes a constant rate of speed and does not account for stops for patient care or litter crew handoffs.

It assumes an ambulance or similar mode of vehicle transportation is waiting at the closest point on a road from the injury location to begin driving immediately.
