

**Near-Term Fire Behavior:**

The east side of the Buckhead (labeled 6 Rough Patch TFR in WFDSS) will grow into the 7 Rough Patch TFR in the next 1-2 burn periods and then will most likely all be considered the "Buckhead Fire". Fire growth will be limited with the upcoming forecast until fire is able to take advantage of slope alignment, I'd assume we may see more growth than modeled in the SW corner of the Near Minky where there is slope alignment.

Simulation does not represent suppression efforts and no barriers were used to model the growth potential over the next 5 days 8/21-8/25.

Simulation does not capture roll-out and instability, if the fire exhibits a high growth day the simulation will need to be re-run. - Josh O'Connor LTAN 8/21/21
