TIME AND DATE Incident Meteorologist (IMET)

FORECAST ISSUED: 7/18/2021 at 2000

<u>Weather Discussion:</u> The pattern for the coming week will be the struggle between a deep low pressure system in the eastern Pacific and a strong high pressure system moving up from the 4 corners area. This will bring a warming and drying trend to the region through the week. There will also be chances for thunderstorms mainly southeast of the burn area both Monday night and Tuesday night. This convection will remain east and south of the Chuweah fire area. Temperatures will cool off later in the week, but highs will remain above normal.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 6	TYPE OF FIRE: Wildland
FIRE NAME: Chuweah Creek	OPERATIONAL PERIOD: July 19-20, 2021. 0600-0600
DATE ISSUED: July 18, 2021	TIME ISSUED: 1800
UNIT: WA-COA	Don Strand FBAN

INPUTS

WEATHER SUMMARY: Sunny today. Max Temps near 98 with min RH near 10%. Winds SW 10-12 mph gusts 20 mph.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Fuel moistures will be trending lower over the next week as temps increase and humidity decreases. Nighttime humidity recovery will be poor. This will affect live and dead fuel availability to burn. Fuels will remain very dry for the foreseeable future. Fire behavior potential remains very high. Potential exists for active fire behavior in the afternoon/evening where wind/topography align and have available fuels. Fire activity will continue most of the night in the thermal belt. ERC's will continue to be in the 97+percentile range. Fuels are mixed grass, brush, conifer with grass and brush understory with areas of light logging slash.

Probability of Ignition will approach 90% today unshaded. Maximum spotting distance approaching 0.2 mile or more with afternoon winds. Expect continued backing, flanking fire spread with occasional upslope movement. Flare up potential exists in areas of dirty burns where live fuels close to surface have been heat treated previously. Single and group torching likely with potential for periodic runs with afternoon and evening winds.

Specific:

DIV: D. Expect fire to back and flank with occasional short runs. In limited areas where afternoon winds align with topography, potential for torching runs exist. In areas east of Keller Butte Road, expect backing and flanking fire behavior with isolated torching. Watch for hold over spot fires from yesterday's activity.

Incident 90 Fire: Fire is in a harvest unit with pockets of pine regeneration, grass and brush. Fire is continuing to clean up surface debris and consume unburned interior fuels. Expect squirrelly winds at times to contribute possible flare ups.

DIV: G: Burnout: Expect backing and flanking fire behavior. Potential for isolated torching on east side of Keller Butte Ridge. On steeper slopes, watch for roll outs carrying burning material down slope below your location.

DIV: K/W. Expect areas unburned areas west of Keller Butte Road to continue to clean up with surface fire spread and occasional torching. Expect backing and flanking fire behavior east of Keller Butte Road. Continue to watch for spot fires. On steeper slopes, watch for roll outs.

AIR OPERATIONS: Watch for turbulence in the complex terrain.

SAFETY

Weather trend is warmer and dryer with poor nighttime humidity recovery. Live and dead fuel moistures will continue to drop contributing to more aggressive fire behavior.

Watch for increased fire activity with wind slope alignment.

Expect snags and damaged trees to burn through and be falling hazards.

14.WEATHER IS GETTING HOTTER AND DRIER
