FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 8	TYPE OF FIRE: Wildland
FIRE NAME: Chuweah Creek	OPERATIONAL PERIOD: July 21-22, 2021. 0600-0600
DATE ISSUED: July 20, 2021	TIME ISSUED: 1800

WEATHER SUMMARY: Sunny today. Max Temps near 90 with min RH near 8%. Winds SW 12-17 mph gusts 25 to 30 mph. **RED FLAG FOR WINDS AND LOW HUMIDITY**

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Fuels: Dead fuels moistures continue to be very dry. Live fuels are drying and becoming more available to burn.
- Fire behavior potential remains very high. Fire will be wind tested. Potential exists for active fire behavior in the afternoon/evening where wind/topography align and have available fuels. Fire activity will continue most of the night in the thermal belt. ERC's will continue to be in the 97+percentile range. Fuels are mixed grass, brush, conifer with grass and brush understory with areas of light logging slash.
- Probability of Ignition will approach 90% today unshaded. Maximum spotting distance approaching 0.8 mile with
 afternoon wind gusts. Expect continued backing, flanking fire spread with occasional upslope movement. Flare up
 potential exists in areas of dirty burns where live fuels close to surface have been heat treated previously. Single
 and group torching likely with potential for periodic runs with afternoon and evening winds.
- Winds are forecasted for west to northwest 8-10 mph after midnight so the eastern flanks of the fire will be the most susceptible.

Specific:

DIV: D. Expect fire to back and flank with occasional short runs. In limited areas where afternoon winds align with topography, potential for torching runs exist. Watch for hold over spot fires.

Incident 90 Fire: Fire is in a harvest unit with pockets of pine regeneration, grass and brush. Fire is continuing to clean up surface debris and consume unburned interior fuels. Expect squirrelly winds at times to contribute possible flare ups and spotting.

DIV: G: Expect backing and flanking fire behavior. Potential for isolated torching on east side of Keller Butte Ridge. On steeper slopes, watch for roll outs carrying burning material down slope below your location.

DIV: K/W. Expect areas unburned areas west of Keller Butte Road to continue to clean up with surface fire spread and occasional torching. Expect backing and flanking fire behavior east of Keller Butte Road. Continue to watch for spot fires. On steeper slopes, watch for roll outs.

INITAIL ATTACK: In the event resources are assisting with local IA, update your SA to your new work area. Remember, the light flashy fuels can quickly change directions of spread and rapidly accelerate. Rates of spread in grass and brush can be much faster than firefighters can move.

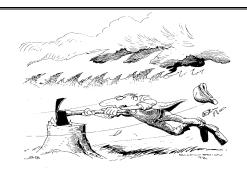

AIR OPERATIONS: Watch for turbulence in the complex terrain.

SAFETY

Watch for increased fire activity with wind slope alignment.

Stronger wind gusts today so continually update your Situation Awareness.

Areas of dirty burns with heat treated brush have potential for reburn.

15.WIND INCREASES AND/OR CHANGES DIRECTION

TOPICS:

HOW TO MAINTAIN FOCUS

What is Focus?

Focus is the thinking skill that allows people to begin a task without procrastination and then maintain their attention and effort until the task is complete. Focus helps people pay attention in the midst of distractions and setbacks and to sustain the effort and energy needed to reach a goal. We all know focus can be hard to maintain when the task doesn't meet our motivation threshold. Remember, even an incident of over 300 personnel, the successful completion of the mission depends on every single person to maintain and perform. Lost focus equals lost productivity and a rise in risk!

RISK MANAGEMENT WEDGE

Be cognizant of the soft elements that fill the wedge. All the small issues will add up. Figure out and work on unloading the wedge before it reaches the critical point. Pay attention to the soft indicators throughout the day.

"Safety gear: 2 minutes ... Risk assessment: 5 minutes ... A mishap that takes a life: forever"
