#### FIRE BEHAVIOR FORECAST

TYPE OF FIRE: Wildland
OPERATIONAL PERIOD: July 22-23, 2021. 0600-0600
TIME ISSUED: 1800
Don Strand FBAN

#### **INPUTS**

**WEATHER SUMMARY:** Sunny. Haines 5. Max Temps near 86 with min RH near 8%. Winds SW 10-12 mph gusts to 25 mph.

#### **OUTPUTS**

#### **FIRE BEHAVIOR**

#### **GENERAL:**

- Fuels: Dead fuels moistures continue to be very dry. Live fuels are drying and becoming more available to burn.
- Fire behavior potential remains very high. Haines 5 will contribute to fire potential the atmosphere being more
  unstable. Potential exists for active fire behavior in the afternoon/evening where wind/topography align and have
  available fuels. Fire activity will continue most of the night in the thermal belt. ERC's will continue to be near the
  97percentile. Fuels are mixed grass, brush, conifer with grass and brush understory with areas of light logging
  slash.
- Probability of Ignition will approach 80% today unshaded. Maximum spotting distance approaching 0.2 mile. Expect
  continued backing, flanking fire spread with occasional upslope movement. Flare up potential exists in areas of dirty
  burns where live fuels close to surface have been heat treated previously, torching likely

#### Specific:

**DIV: D.** Expect fire to back and flank with occasional short runs. In limited areas where afternoon winds align with topography, potential for torching runs with spotting exist. Watch for hold over spot fires.

Incident 90 Fire: Fire is in a harvest unit with pockets of pine regeneration, grass and brush. Fire is continuing to clean up surface debris and consume unburned interior fuels. Expect squirrelly winds at times to contribute possible flare ups and spotting.

**DIV: G:** Expect backing and flanking fire behavior. Potential for isolated torching in areas with dirty burns. On steeper slopes, watch for roll outs carrying burning material down slope below your location.

**DIV: K/W.** Expect areas unburned areas west of Keller Butte Road to continue to clean up with surface fire spread and occasional torching. Continue to watch for spot fires. On steeper slopes, watch for roll outs.

**INITAIL ATTACK:** In the event resources are assisting with local IA, update your SA to your new work area. Remember, the light flashy fuels can quickly change directions of spread and rapidly accelerate. Rates of spread in grass and brush can be much faster than firefighters can move.

AIR OPERATIONS: Watch for turbulence in the complex terrain.

#### **SAFETY**

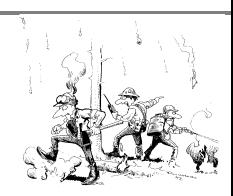

Haines 5 of or higher days can contribute to fires becoming very active.

Stump holes burning deep.

Watch for increased fire activity with wind slope alignment.

Areas of dirty burns with heat treated brush have potential for reburn.

Dozer and road berms have potential to hold heat.

16.GETTING FREQUENT SPOT FIRES ACROSS LINE

# Safety Message 22-23 July 2021

INCIDENT: Chuweah Creek OPERATIONAL PERIOD: 0600-0600

#### **TOPICS:**

#### MISSION CREEP

Mission Creep is the expansion of a mission or task beyond original objectives or assignment. In our business this is most often undesirable unless serious life considerations are at risk. Many times Mission Creep will continue once started until catastrophic failure or undesirable outcomes are encountered. Plans are built based on set and measurable objectives. Stay in your lane and avoid the urge to creep!

#### **HYDRATION/NUTRITION**

- \* Drink fluids throughout operational period (water and Gatorade) not energy drinks
- \* Rotate crews out of smoky areas
- \* Follow work / rest guidelines
- \* Set a reasonable work pace and allow adequate rest breaks
- \* Use buddy system to monitor personnel of heat related and fatigue issues
- \* For Heat Related Injuries refer to IRPG pg.109
- \* Ensure adequate caloric intake.

Remember: SLOW IS SMOOTH, SMOOTH IS FAST
