FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 15	TYPE OF FIRE: Wildland
FIRE NAME: Chuweah Creek	OPERATIONAL PERIOD: July 28-29, 2021 0600-0600
DATE ISSUED: July 27, 2021	TIME ISSUED: 2100 Hours

INPUTS

WEATHER SUMMARY:

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Fuels: Dead fuel moistures continue to be very dry. Live fuels continue to dry and are becoming more available to burn.
- Fire behavior potential remains very high although the threat of escape is low due to suppression efforts. Thermal belt developing overnight so anything burning will continue burning in the thermal belt. ERC's will continue to be near the 97th percentile. Fuels are mixed grass, brush, conifer with grass and brush understory with areas of light logging slash.
- Probability if ignition will approach 90% today unshaded. Maximum spotting distance approaching .3 mile. Expect continued clean up of interior unburned islands with backing, flanking fire spread with very isolated torching where ladder fuels are available.

SPECIFIC:

DIV D: Expect fire to continue to clean up small interior unburned islands and areas of dirty burn. Still potential for isolated torching with potential for short range spotting.

DIV G: Potential for isolated torching in areas of burnout and interior dirty burns. On steeper slopes, watch for roll outs carrying the burning material down slope below your location.

DIV KW: Continue to watch for areas of dirty burn to smolder. Potential for very isolated torching exists. On steeper slopes, watch for roll outs.

Initial Attack: In the event resources are assisting with local IA, update your SA to your new work area. Remember, the light flashy fuels can quickly change directions of spread and rapidly accelerate. Rates of spread in grass and brush can be much faster than firefighters can move.

AIR OPERATIONS: Watch for turbulence in the complex terrain. Smoke will impact visibility until approx. 1400.

SAFETY

Heads up with fire weakened trees and snags, breezy conditions will increase the risk of trees coming down.

SAFETY MESSAGE

Planning for Medical Emergencies

- Prior to each operational period be able to answer these 3 questions;
 1. **What are you going to do if someone gets hurt?**
 - Where is your closest medical personnel and ambulance?
 2. **How will we get them out of here?**
 - Can you get the injured to a road or helispot, what will it take to do that?
 3. **How long will it take to get them to a hospital?**
 - Where is the closest hospital, air or ground transport, what conditions can change or affect the transportation timeline?

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	COMMUNICATION BUCKET DROPS DEHYDRATION	HEAVY EQUIPMENT SNAGS ROLLING MATERIAL
--	--	--

Be sure all elements of your safety plan are in place prior to engagement

**Mitigate or Change Tactics
When Faced With**

- Indirect Fireline/underslung line
- Change in wind speed and/or direction
- Re-burn Potential
- Presence of Hazardous Materials
- Lack of Communications
- Spotting Becomes Common
- Downhill Line Construction
- Fatigued Crew

Radio Communications

- Use clear and concise language when transmitting
- Pause briefly before speaking when transmitting
- Wait for the repeater to click off before replying to a message
- Acknowledge messages to ensure they were received
- When channels are busy, keep radio traffic to a minimum

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
