<b>Comments / notes on tonight's mission and this interpretation:</b> This scan was requested, as part of the flight over Green Ridge, to determine if any heat was visible in the Wenaha River basin. The two isolated heat sources previously detected (on the south flank of Squaw Peak, approximately 1.8 miles northwest of the confluence of Deep Saddle Creek and the North Fork Wenaha River) were not visible in this scan. <u>No data was put into NIFS.</u>
