Fire Behavior Summary

GENERAL: Primary fuel types are TL5 and TU5. **TL5** is compact short needle conifer litter, found primarily in 2nd growth Douglas fir plantations. **TU5** is timber overstory with very high surface fuel load- short needle conifer with heavy brush and down log fuel loading in mature or old growth stands. Lichen is present across the landscape and spots readily. Timber stands with needle litter (**TL3**), dominated by Fir, Hemlock, or Lodgepole Pine. **TL8** is timber stands with needle litter dominated by Ponderosa Pine.

Surface Fuel Type	Head Fire ROS	Head FL	Spot Distance
Understory and litter fuels	1 to 6 ch/hr or feet/min.	Up to 1 to 5 feet	Up to 0.2 mile

Haines	Probability of Ignition	Fine dead fuel moisture 1-hour	10-hour dead fuel moisture	1000- hour fuel moisture
4 (Low)	40 to 70%.	4-8%	6 to 9%	12 to 15%

Elevated fire behavior potential due to dry live and dead fuels. Less winds so max spotting distance is less. Generally, fire spread will be near to what was observed yesterday. Potential for short upslope runs exist in areas with available fuels. Lichen reacts quickly to changes in humidity and contributes to torching and short-range spotting. Areas of thick smoke may affect fire intensity. With poor to moderate nighttime humidity recovery, fire may back or flank into areas with available fuels and be in position to make short upslope runs with torching and spotting.

Today's Fire Behavior

DIV AY: Expect mostly smoldering and creeping with isolated torching due to heavy fuels under sheltered canopy. Expect continued backing fire spread down slope in areas of available fuels.

DIV W/X: Expect smoldering and creeping fire behavior in interior unburned islands of fuels. Potential for single tree torching. In areas with steeper slopes with heavy surface loading, potential exists for short uphill runs.

DIV T. S: Surface fire spread in heavy fuels with single and group torching. Potential for short upslope runs exists. Smoldering and creeping in needle litter under regeneration stands with very limited torching. Potential for spotting from rolling material in areas with steeper slopes. There will likely be spot fires from yesterday or even last night's fire behavior.

DIV P/R: Smoldering, creeping, backing and flanking fire spread in the heavy surface fuels. Expect occasional torching with potential for isolated short-range spotting.

AIR OPERATIONS: Expect limited visibility due to smoke. Moderate to strong inversion, mixing out after 1200.

SAFETY

In areas of dirty burns with surface fire under heat treated ladder fuels, potential for reburn/flare ups exist.

SAFETY MESSAGE

17 October 2022

INCIDENT: CEDAR CREEK

OPERATIONAL PERIOD: 0700-2000

TOPICS:

Complacency - a feeling of smug or uncritical satisfaction with oneself or one's achievements.

“Complacency is just a fancy word for Laziness” – Chief Lasky

Dangerous Lines

“We’re “just” monitoring the fire.” ~ “There hasn’t been any activity in forever” ~ “We’re just here as a political show” ~ “Another day – another fire.” ~ “Same fire – different day.”

“It’s just another fire.”

Truth

There are no two fires that are the same. Each day on a fire should be treated as the first day. Never let your guard down, fires change in a second, but can change your life forever.

Highway 58 Construction

EXPECT PILOT CAR OPERATIONS between MM 66-70. If you are turning onto HWY 58 from a crossroad, wait for the pilot car to approach. We want to avoid driving against the one-way traffic.

IF YOU SEE CONES, YOU ARE IN A ONE-WAY CONSTRUCTION ZONE.

SAFETY OFFICER: Troy Corn, Jack Cates and Phil Graham (t)

Deliberate Risk Assessment-Hazard Summary

17 OCT 2022

Hazard	Mitigation	Post Risk
Extraction Time	Identify medivac sites and helispots. Initiate ground transport to accident site for transport capability. Identify EMT/EMTP from resources assigned to division. Provide line qualified paramedics to each division as available. Review IWI protocol to ensure familiarity. Utilize agency and civilian medivac as treatment/timing dictates. Evaluate on-going need for repositioning medical personnel. Provide Dust abatement on Helispots as needed.	HIGH
Aircraft	Utilize Air Attack. Ensure all resources are a safe distance from all bucket and retardant drops. Establish LCES. Utilize air to ground primary for fixed wing, air to ground 2 for bucket work as needed. Reference IRPG (Safe aircraft operations pg. 61-62). Ensure IA resources have coordination with unassigned local air resources to provide deconfliction.	HIGH
Railroad Right-of-Way	Implement work windows/slow orders with Union Pacific when personnel are working near the right-of-way. Post lookouts at each end of work zones.	HIGH
Hazard Trees	Use avoidance to limit exposure time. Fall ahead to avoid exposure. Use qualified fallers or alternate methods if needed. Conduct on- going risk analysis of all work areas. Follow Hazard Tree Safety Guidelines (IRPG page 20-21).	HIGH
Heavy Equipment	Post lookouts around equipment work areas. Establish communications with equipment boss and operator. Do not work down slope from equipment. Follow agency guidelines for chipping operations.	HIGH
Physical Factors	Maintain hydration schedule. Closely monitor work rate and implement rest periods. Maintain nutrition. Ensure adequate work/rest.	MODERATE
Fire Behavior	Be aware of burn windows and weather impacts and min/max RH for flashy fuels/local conditions. Report changes to FBAN and IMET. Establish MAP for disengagement to provide for an orderly retreat given lack of safety zones. Have a plan for disengagement that establishes a designated meeting point and maintains personnel accountability.	MODERATE
Steep Terrain/Gravity	Establish LCES. Do not work crews above or below each other. Post lookouts for rolling material. Watch footing in loose soil, rock and around vegetation. Do not work below heavy equipment. Scout and identify travel routes.	MODERATE
Transportation	Coordinate with ODOT for construction windows and areas of one lane traffic along HWY58. Provide daily updates of construction progress. Sign all incident roads that provide access to divisions. Provide daily updated travel plan maps. Practice defensive driving. In local communities obey the posted speed limits. Use reader boards to provide advanced warning and control entry to base camp as needed. Identify and evaluate contingency and alternate escape and travel routes. Provide dust abatement and grading as needed. Provide advanced scouting for transport access and bridge weight restrictions.	MODERATE
Unburned Fuels/Firing Ops	Establish LCES. Ensure management action points are implemented and followed. Weather updates as needed during burning operations. Locate indirect firelines to minimize unburned fuels. Follow Interagency Ignition Guide. Ensure communications between all firing operations. Establish road security at all firing sites. Follow approved firing plan for unburned fuels.	MODERATE
Environmental Factors	Assign medical personnel to camp. Assess for known allergies and report to medical personnel. Obtain Bee Bopper/wasp spray and yellow jacket traps. Maintain an awareness wildlife and poison oak. Identify and report allergies to your chain of command.	MODERATE
Communication	Evaluate for dead zones prior to engagement. Utilize human repeaters as needed. Ensure accountability of resources in problem areas. Spiking resources must have communication coverage.	LOW
Viral Transmission Mitigations, Communicable Disease	Maintain awareness of health, perform self checks, maintain social distancing, wear face coverings in accordance with CDC recommendations. Report and isolate if not feeling well. Use remote briefings, spike camps and logistical layouts that provide for social distancing as necessary. Establish liaison with Lane County Public Health.	LOW
Public Interaction	Implement area and road closures as necessary. Maintain a lookout for hunters in and out of closure areas. Maintain awareness of evacuation areas and provide accurate information dissemination.	LOW
Initial Attack	Ensure identified IA resources are briefed of expectations and ensure communication plan is provided. Ensure resources are briefed on IA command structure. Provide identified crews with area maps.	LOW

Resource Advisor Message

Cedar Creek Fire

Mark Richardson, Lead READ, 412-618-7632, mark.richardson@usda.gov

Suppression Repair Standards

Waterbars

Height of water bar for handlines should average 6-12 inches. Height of machine-constructed water bars not to exceed 18 inches on slopes less than 40%. Height of machine-constructed water bars not to exceed 30 inches on slopes greater than 40%.

- Cut in the water bar – do not simply push up loose soil.
- Water bars should direct runoff away from the burned area where possible.
- Assure that the down slope end of the water bar is open and has adequate length to allow free flow of water off the fire line.
- Logs can be incorporated into water bars as long as they are embedded or anchored in a trench. Ensure fire end of log does not contact any organic material.
- Place slash below outlets of water bars to help slow runoff and collect sediment.

In selecting areas for establishing water bars the following should be considered:

- Locate bars at natural slope breaks. The idea is to move water off the fire line before it can build up enough energy to erode soil.
- When possible, locate bars where the outlet empties onto a resistant surface (i.e. rock or log debris).
- Locate bar outlets to provide maximum buffer distance to stream channel.
- Angle of water bars should be 20-45 degrees to the line.

Fire Line Slope %	Maximum Water Bar Spacing (feet)
2-5	300
6-10	200
11-15	150
16-20	100
21-35	75
36+	50

Dozer Line Repair

- Pull in berms and woody debris developed in construction of fireline. Distribute this material over the surface of the fire line, similar to the density of the surrounding area.
- Blockade lines at intersect with roads by placing logs and slash across the lines for 300 feet or site distance to minimize motorized use. Take extra care to return the entry points to a natural appearance that blends in with the surrounding landscape to the extent possible.
- At some line intersections with roads, it may be necessary to block access by constructing earthen berms and/or place boulders, heavy logs, slash, and other large vegetative material at the beginning of dozer line. These sites will be identified in Field Maps.
- Other blockage may be identified if lines exposed sensitive areas to future human intrusion.
- Lines requiring native seeding or weed-free mulching will **be identified in the Field Maps. If there isn't** enough debris to achieve 50% ground cover, REAFs may identify areas where weed free straw, or wood mulch is needed. Work with a resource advisor to implement seeding where necessary.

Chipping Standards

- Provide a 30- foot buffer of no chipping at water crossings or culverts.
- Do not place chips into road ditch.
- Do not chip onto a steep slope where chips will slide back into the ditch.
- Broadcast chipped material, ensuring that chips are no more than 4" deep.

640 Road: Cutting and Piling Specifications

- Within the wildlife habitat area: Load and transport piled log rounds from both sides of road and remove outside the core. Pile this material OUTSIDE the wildlife area at designated locations to be later burned following the specs below (NO burn piles within the wildlife habitat area).

Pile Specifications:

- Okay to fell a few trees <12" DBH within the current fuel break (West) side of road to accommodate the following burn pile specs, as coordinated with onsite READs.
- Min dimensions: 6 ft. W x 6 ft. H with brush and small debris at base;
- Max dimensions: Can NOT encroach into a 25 ft. buffer around adjacent leave trees;
- Chip and broadcast spray material on either side of the road but keep outside of any stream channels

Figure 2. Typical roadway on moderate slopes with no additional clearing.

Please reach out to the REAF assigned to your division with any questions or concerns.

DEMOB INSTRUCTIONS

Cedar Creek, Junction Camp, Big Swamp & Potter

AIR TRAVEL – All resources requiring air travel to their home unit must call DEMOB 72 hours in advance of departure date to make travel arrangements.

DEMOB LOCATIONS: All demobs will occur at the resource current locations (Oakridge ICP or Junction Camp). Please follow the steps in this order.

1. **IAP:** Refer to the Tentative Demob list for your assigned Demob date/time.
2. **WEED WASH:** All vehicles that have driven off the pavement need to complete a weed wash before leaving. Weed wash is located at Kokanee Staging near Oakridge ICP and Crescent Staging near Junction Camp.
3. **GROUND SUPPORT:** Equipment contractors need to pick up inspection forms at Ground Support. If damage or claims are reported an inspection may be performed. Ground Support will inform Demob when completed.
4. **COMMUNICATIONS AND SUPPLY:** Turn in all checked out items to the respective units. As items are returned, Demob will be notified.
5. **FINANCE:** Report to Finance and close out all final paperwork.
6. **DEMOB:** Once closed out in Finance, call Demob at 541-482-1331. If no answer, try again in a few minutes. If still no answer, then leave a message with the following information:
 - a. Your Resource Order Number
 - b. Name of Resource/Company
 - c. City/State you are traveling to
 - d. Estimate time of departure and arrival
 - i. Rest overnight (RON) location if applicable.

This is the last step before you start your travel.

Human Resource Message Cedar Creek Fire, 10/17/2022

COMMUNICATION

There is a saying, "Say what you mean and mean what you say." This statement is important because words have power. How we use our words can have an impact that is positive and lasting.

When talking with a person, look for a moment of silent registry. This is the moment at which a person seems to freeze and ponder what is being said and is often the place at which the person(s) is engaged, something you have said has hit a chord and resonated with him or her. If the conversation is becoming more difficult than you can bear at that time, then explain why you are hesitant to talk and then close the discussion.

A good habit to get into is thinking through what you intend to say to be sure that is indeed what you mean to say. Another important part of communication is listening. There is a wonderful expression: You have two ears and one mouth and it's best to use them in that proportion.

Don't let unresolved matters go unanswered. Try and talk it out and if you need help in resolving any issue, reach out to your supervisor or to human resources.

There is another saying: Mean What you say, but don't say It mean. Easily we can offend Someone by a careless slip of the tongue. Let's all try to be more sensitive in our dealing with one another.

- Observe social distancing standards while waiting in line for food and limit contact with others outside of your crew in the food service line. If possible, send crew representatives to pick up meals.
- Practice good personal hygiene, wash hands frequently and disinfect high-traffic areas on a regular basis.
- Limit close contact between firefighters and the public as much as possible to prevent exposure and spread.

Short-Haul Operations

CAPABILITIES

- During an operational Short-Haul the helicopter is capable of inserting Short-Haulers into an area with tight canopy cover and/or technical terrain.
- Haul line lengths range from 100 feet to 350 feet.
- Short hauler and/or medical gear can be delivered to the medical scene even if extraction by short-haul is not necessary.

ORDERING

- EMT or Medical Incident IC determines medical extraction is required.
- Follow local established procedures and/or Medical Incident Report (MIR) in the IRPG.
- Confirm aircraft type, call sign, estimated time of arrival and frequency.
- Give site selection information when ordering: hazards (i.e. ash, smoke, snags, aerial), tree height, terrain, and patient transport configuration (supine or seated position). Repeat hazards and give updated weather conditions as well as brief patient update to responding helicopter.

PROCESS: The helicopter will fly to the coordinates provided. They will make contact with ground personnel on scene with the patient using an identified air-to-ground frequency. The helicopter will complete a short-haul recon and size up, gather patient update information and then fly to a landing zone (LZ) to configure for short-haul operations. The helicopter will be monitoring the appropriate air-to-ground, air guard and victor frequencies. From this point, ground resources should only contact the helicopter in case of an emergency. During the insertion and extraction process ground personnel must be clear of the area.

ON SCENE: EXPECT THE FOLLOWING

- 1 or 2 rescuers (at least one qualified as an EMT or higher)
- Backboard (if needed and not already on scene)
- All equipment necessary for patient extraction

The Patient Extraction Bag accommodates most backboards.
-A patient on a backboard, TRS, SKED or litter will be inserted into the bag.

The Seat Harness is used for patients not requiring the use of a backboard.
