Fire Weather Forecast

FORECAST NO: 2
PREDICTION FOR: Monday

Incident Meteorologist (IMET)

FORECAST ISSUED: 8/28/2022 at 2000

Bob Tobin

Very Warm and Dry...Haines increasing

Weather Discussion: High pressure will remain strong east of the Cascades through Thursday. This will result in a warming and drying trend, with poor to moderate relative humidity recoveries at night. A couple of weak disturbances will bring increased and shifting winds to the area Tuesday and Wednesday. The high level Haines Index will increase to 5 and combined with a very high mixing height could result in active fire behavior. A cold front will move through the region Friday afternoon. This front looks pretty dry, but expect much cooler temperatures and gusty/shifting winds.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	TYPE OF FIRE: WILDFIRE
FIRE NAME: Crockets Knob	OPERATIONAL PERIOD: Day Shift Aug. 29, 2022
DATE ISSUED: Aug. 28, 2022	TIME ISSUED: 2000 HOURS
UNIT: OR-MAF	SIGNED: DON STRAND, FBAN

INPUTS

WEATHER SUMMARY: See attached spot weather forecast. Max temps – mid 80's to 90 with min RH near 15%. Winds – upslope 4-8 MPH with ridge winds Southwest-west 7-10 MPH. Haines Index 4 (low).

FUELS: Consists of dense Ceanothus brush, dense lodgepole pine regeneration with a surface litter of large down wood. The fire area also contains snags and areas with remnant live trees which survived the 1996 fire. In areas with 30 feet tall ponderosa pine regeneration, some of the understory brush is covered with pine needle cast. Some areas in the mid to lower elevation contain a mostly cured grass component with a higher-than-average fuel loading due to the wet spring.

Live fuel moistures in the Ceanothus are estimated to be near 100%. 1000-hour dead fuel moistures are in the 10% range. 10-hr and 100-hr fuel moistures are in the critically dry range.

Energy Release Component is near the 90th percentile and trending higher through the week.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Fire behavior will primarily be backing and flanking. As humidity drops below 20% expect an increase in activity. Both live and dead fuel moistures will decrease as the weather warms and dries contributing to increased fire intensity. Expect burning periods to increase over the next few days with poor to moderate nighttime humidity recovery. Where fire gets in alignment with winds and or slope, expect short upslope runs in the brush, reproduction, and timber stringers. In areas with jackpots of woody debris under the dense reproduction, single and group torching likely. Potential for flare ups exists in areas of dirty burns. The down woody debris will be receptive for spot fires.

Probability of Ignition will be near 90% unshaded and 80% shaded with short range spotting likely. Maximum spotting near 1500 feet. Spot fires can initiate quickly and have potential for rapid spread. Some past spot fires have been difficult to suppress.

Head fire rates of spread in the brush range 10 to 16 feet/minute and where wind and slope align, 24 to 30 feet/minute likely.

SPECIFIC:

DIV A: Expect backing and flanking fire with potential for torching. In areas of dirty burn, flare ups likely.

DIV E: Timbered basins and stringer interior to lines will continue to flank with potential for short upslope runs

DIV Z: Continue to watch for hold over spots. Unburned fingers have potential to become active and spread upslope.

INITIAL ATTACK: In the event resources respond to a new start, update your Situational Awareness by observing the fuels, weather, and topography where the new fire is located. Potential for rapid rates of spread in light flashy fuels exist.

AIR OPERATIONS: Expect areas of smoke haze in the morning

SAFETY

Fire weakened snags and live trees remain an overhead hazard.

As the morning inversion lifts, expect an increase in fire activity.

Rolling debris on steeper slopes has potential to carry burning material down slope.

With the warming and drying trend, plus poor to moderate nighttime humidity recovery, expect to see longer burn periods and increased potential for fire behavior.

Safety Message

29 August 2022

INCIDENT: CROCKETS KNOB

OPERATIONAL PERIOD: 0600-1800

TOPICS:

ATTENTION and SPEED

Driving may be one of most taken for granted activities we engage in. Traffic accidents are rapidly becoming one of top causes for firefighter injuries and fatalities. Use ALL safety equipment; seat belts, frequently check your mirrors, keep lights on and always use a spotter in all circumstances with blind spots. Practice good road SA. Anticipate vehicles on blind curves, maintain proper speed for conditions, look where you want to go, not where you are. Mark known driving hazards, communicate turn-around sites and manage flow of traffic. If in doubt, SLOW DOWN. Leave the cell phone in your pocket and avoid other items/activities that compete for your attention.

EXTRACTION

Review extraction routes and methods. Identify equipment on hand and needed to facilitate extraction over rough terrain. Recognize precautions that need to be taken for different types of injuries. Review your options for transport while keeping the “Golden Hour” as your objective. Close the window between triage and arrival at definitive care.

Don't ever create a plan that is so complex that you can't explain it to those that have to carry it out.

SAFETY OFFICER: Troy Corn, Jack Cates

Deliberate Risk Assessment-Hazard Summary

29 August 2022

Hazard	Mitigation	Post Risk
Extraction Time	Identify medivac sites and helispots. Initiate ground transport to accident site for transport capability. Identify EMT/EMTP from resources assigned to division. Provide line qualified paramedics to each division as available. Review IWI protocol to ensure familiarity. Utilize agency and civilian medivac as treatment/timing dictates. Evaluate on-going need for repositioning medical personnel.	HIGH
Aircraft	Utilize Air Attack. Ensure all resources are a safe distance from all bucket and retardant drops. Establish LCES. Utilize air to ground primary radio channel. Reference IRPG (Safe aircraft operations pg. 56-58). Ensure IA resources have coordination with unassigned local air resources to provide deconfliction.	HIGH
Hazard Trees	Use avoidance to limit exposure time. Fall ahead to avoid exposure. Use qualified fallers, blasting, or alternate methods if needed. Conduct on-going risk analysis of all work areas. Follow Hazard Tree Safety Guidelines (IRPG page 22).	HIGH

Fuel Conditions	Establish LCES. Ensure management action points are implemented and followed. Obtain weather updates as needed during burning operations. Locate indirect firelines to minimize the amount of unburned fuels. Follow Interagency Ignition Guide. Ensure communications between all firing operations. Establish road security at all firing sites. Follow approved firing plan for unburned fuels.	MODERATE
Steep Terrain/Gravity	Establish LCES. Do not work crews above or below each other. Post lookouts for rolling material. Watch footing in loose soil, rock and around vegetation. Do not work below heavy equipment. Scout and identify travel routes.	MODERATE
Transportation	Sign all incident roads that provide access to divisions. Provide daily updated travel plan maps. Practice defensive driving. In local communities obey the posted speed limits. Use reader boards to control entry as needed. Identify and evaluate contingency and alternate escape and travel routes. Provide dust abatement as needed.	MODERATE
Initial Attack	Ensure identified IA resources are briefed of expectations and ensure communication plan is provided. Ensure resources are briefed on IA command structure. Provide identified crews with area maps.	MODERATE
Environmental Factors	Assign medical personnel to camp. Assess for known allergies and report to medical personnel. Obtain Bee Bopper/wasp spray and yellow jacket traps. Maintain an awareness of livestock and rattlesnakes. Identify allergies to your chain of command.	MODERATE
Communication	Evaluate for dead zones prior to engagement. Utilize human repeaters as needed. Ensure accountability of resources in problem areas.	LOW
Public Interaction	Implement area and road closures as necessary. Keep a lookout for hunters in and out of closure areas. Maintain awareness of evacuation areas and provide accurate information dissemination.	LOW
Viral Transmission Mitigations, Communicable Disease	Maintain awareness of health, perform self-checks, maintain social distancing, wear face coverings in accordance with CDC recommendations. Report and isolate if not feeling well. Use remote briefings, spike camps and logistical layouts that provide for social distancing as necessary. Establish liaison with Grant County Public Health. Malheur National Forest Suppression Guidelines

Crocketts Knob

Prepared: 8/28/2022

Resource Advisors

Lead: Ryan Monzulla

Exemption – in the event that life or property is threatened, violating the following guidance is acceptable, provided that the suppression action is expected to mitigate the risk.

Fire Retardant

- Mixing sites must be at least 150 ft from water courses
- Avoid application of retardant or foam in areas where there is a potential for direct delivery to water. Use water instead or stay 300 feet away from all waterways
- When fire retardant is dropped within 300 feet of water, fire personnel must immediately report the incident to the Lead READ

Why the concern?

- There is an immediate spike in ammonia when fire retardants enter a waterbody.
- Ammonia is toxic to fish causing eye and gill damage, and suffocation.
- Many fire retardants also contain flocculants which inhibit respiration.
- Ammonia concentrations could remain lethal up to 6.2 miles downstream.
- Fertilizer may enhance invasive plants affecting habitat of sensitive species.
