Fire Weather Forecast

FORECAST NO: 3
PREDICTION FOR: Tuesday
Shift Date: August 30, 2022
TIME AND DATE

INCIDENT: Crockets Knob Fire
UNIT: USFS-Malheur
SIGNED: Bob Tobin
Incident Meteorologist (IMET)

FORECAST ISSUED: 8/29/2022 at 2000

Bob Tobin

Very Warm, Dry and Unstable

Weather Discussion: High pressure over the Pacific Northwest will result in well above normal temperatures, very low relative humidity, and poor overnight recoveries on mid-slopes and ridges. A weather disturbance will move through the fire area on Tuesday. There will be enough mid-level moisture and instability to support some afternoon virga showers and possibly a thunderstorm. The main challenge with these virga showers will be strong/gusty outflow winds late in the afternoon. Another wave will move north along the Cascades on Wednesday and this will likely increase the winds on area ridges. A cold front that was expected Friday afternoon is weakening, slowing down and further north than previously advertised. Still expect cooler temperatures and gusty/shifting winds going into the weekend.

WEATHER FORECAST:

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 3	TYPE OF FIRE: WILDFIRE
FIRE NAME: Crockets Knob	OPERATIONAL PERIOD: Day Shift Aug. 30, 2022
DATE ISSUED: Aug. 29, 2022	TIME ISSUED: 2000 HOURS
UNIT: OR-MAF	SIGNED: DON STRAND, FBAN

INPUTS

WEATHER SUMMARY: See attached spot weather forecast. Max temps – 89 to 95 with min RH near 12%. Winds – upslope 5-9 MPH with ridge winds Southeast 7-10 MPH. Chance of gusty and erratic winds near virga showers. Haines Index 5 (moderate).

FUELS: Consists of dense Ceanothus brush, dense lodgepole pine regeneration with a surface litter of large down wood. The fire area also contains snags and areas with remnant live trees which survived the 1996 fire. In areas with 30 feet tall ponderosa pine regeneration, some of the understory brush is covered with pine needle cast.

Live fuel moistures in the Ceanothus are estimated to be near 100%. 1000-hour dead fuel moistures are in the 10% range. 10-hr and 100-hr fuel moistures are in the critically dry range.

Energy Release Component is near the 90th percentile and trending higher through the week.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Fire behavior potential will see a markedly increase today due to poor nighttime humidity recovery, daytime humidity in the low to mid-teens and temps approaching the mid 90's with a Haines 5. Expect an increase in fire intensity as well as more active fire spread and increased burning period. With the Haines of fire, column development will be stronger and higher. Maximum spotting distance will also increase. Where fire gets in alignment with winds and or slope, expect short upslope runs in the brush, reproduction and timber stringers. In areas with concentrations of woody debris under the dense reproduction, single and group torching likely. Potential for flare ups exists in areas of dirty burns.

Probability of Ignition will be near 90%. Maximum spotting distance near 0.3 miles and with stronger wind gusts associated with any outflow winds from virga showers the spotting will increase to near 0.75 miles. Spot fires can initiate quickly and have potential for rapid spread.

Head fire rates of spread in the brush range 10 to 16 feet/minute and where wind and slope align, 24 to 30 feet/minute likely.

SPECIFIC:

DIV A: Expect backing and flanking fire with potential for torching. In areas of dirty burn, flare ups likely. Pay attention for squirrely winds in the drainages.

DIV E: Timbered basins and stringers interior to lines will continue to flank with potential for short upslope runs with torching and spotting.

DIV Z: In the unburned islands and fingers, expect backing and flanking fire spread with torching in the pockets of regeneration. Potential for short upslope runs exist.

INITIAL ATTACK: In the event resources respond to a new start, update your Situational Awareness by observing the fuels, weather, and topography where the new fire is located. Potential for rapid rates of spread in light flashy fuels exist.

AIR OPERATIONS: Expect areas of smoke haze in the morning

SAFETY

Fire weakened snags and live trees remain an overhead hazard.

Today is a good time to review the 18 watchouts. Several stand out: Unburned fuel between you and fire, Weather getting hotter and drier, Wind increases and/or changes direction.

Safety Message

30 August 2022

INCIDENT: CROCKETS KNOB

OPERATIONAL PERIOD: 0600-1800

TOPICS:

MINESHAFTS

The John Day drainage was a hotbed of mining activity during the mid-1800's. Numerous shafts exist within and adjacent to the fire area. Identify any shafts in your work area and avoid. Contact incident READ's for assistance in determining location and marking.

HYDRATION AND HEAT

The latest heatwave is upon us. Keep ahead of your hydration schedule, ensure you have at least one quart of water per employee, per hour. Establish work/rest periods to ensure personnel get shading as needed. Review your medical protocols for heat related injuries.

There is an isolated risk of thunderstorms for today over the fire area. Review thunderstorm safety in your IRPG (page 17).

Don't add resources to a non-plan.

SAFETY OFFICER: Troy Corn, Jack Cates, Eric Miller
