## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 4	<b>TYPE OF FIRE:</b> WILDFIRE
<b>FIRE NAME:</b> Crockets Knob	<b>OPERATIONAL PERIOD:</b> Day Shift Aug. 31, 2022
<b>DATE ISSUED:</b> Aug. 30, 2022	<b>TIME ISSUED:</b> 2000 HOURS
<b>UNIT:</b> OR-MAF	<b>SIGNED:</b> DON STRAND, FBAN

### INPUTS

**WEATHER SUMMARY:** See attached spot weather forecast. Max temps – 90 to 95 with min RH near 12%. Winds – upslope 4-8 MPH with ridge winds West-southwest 9-14 MPH With gusts near 25 MPH. Haines Index 5 (moderate).

**FUELS:** Consists of dense Ceanothus brush, dense lodgepole pine regeneration with a surface litter of large down wood. The fire area also contains snags and areas with remnant live trees which survived the 1996 fire. In areas with 30 feet tall ponderosa pine regeneration, some of the understory brush is covered with pine needle cast.

Live fuel moistures in the Ceanothus are estimated to be near 100%. 1000-hour dead fuel moistures are in the 10% range. 10-hr and 100-hr fuel moistures are in the critically dry range.

Energy Release Component is near the 90<sup>th</sup> percentile and trending higher through the week.

### OUTPUTS

#### FIRE BEHAVIOR

**GENERAL: HEADS UP FIRE DAY** -Fire behavior potential will continue to be elevated with due to poor nighttime humidity recovery, daytime humidity in the low to mid-teens and temps approaching the mid 90's with a Haines 5. Shifting wind directions throughout the day may impact all Divisions. Expect an increase in fire intensity as well as more active fire spread and increased burning period. With the Haines of 5, column development will be stronger and higher. Where fire gets in alignment with winds and or slope, expect short upslope runs in the brush, reproduction, and timber stringers. In areas with concentrations of woody debris under the dense reproduction, single and group torching likely. Potential for flare ups exists in areas of dirty burns.

Probability of Ignition will be near 90%. Maximum spotting distance near 0.3 miles and with stronger wind gusts associated with any outflow winds from virga showers the spotting will increase to near 0.75 miles. Spot fires can initiate quickly and have potential for rapid spread.

Head fire rates of spread in the brush range 10 to 16 feet/minute and where wind and slope align, 24 to 30 feet/minute likely.

#### SPECIFIC:

**DIV A:** Expect backing, flanking with short upslope runs with torching. In areas of dirty burn, flare ups likely. Pay attention for squirrely winds in the drainages. Potential exists for hold over spots in the Myrtle Creek drainage.

**DIV E:** The new area with spot fires will continue to spread in available fuels. Likely hold over spots from yesterday. Expect occasional torching and spotting. Pockets of timber/brush east of the Timbered basins and stringers interior to lines will continue to flank with potential for short upslope runs with torching and spotting. In the sparse grass openings, scattered pockets of brush, trees and woody debris are receptive to fire brands.

**DIV Z:** In the unburned islands and fingers, expect backing and flanking fire spread with torching in the pockets of regeneration. West to northwest wind will push at your control lines. Potential for short upslope runs. Continue to keep an eye out for spotting.

**INITIAL ATTACK:** In the event resources respond to a new start, update your Situational Awareness by observing the fuels, weather, and topography where the new fire is located. Potential for rapid rates of spread in light flashy fuels exist.

**AIR OPERATIONS:** Expect areas of smoke haze in the morning

### SAFETY

Continue to monitor for spot fires. Remember Watchout #16 – “getting frequent spot fires across line”.

Shifting wind directions throughout the day may affect all Divisions. As winds change, ask yourself how will this affect the fire and where I'm working.

# Safety Message

31 August 2022

INCIDENT: CROCKETS KNOB

OPERATIONAL PERIOD: 0600-1800

TOPICS: UNBURNED FUEL BETWEEN YOU AND THE FIRE

Lots of unburned fuel exists with the indirect strategy. Maintain good SA of fire activity and location. Ensure lookouts are in place with positive communication. Ensure positive communications within division and adjacent divisions during firing operations. Develop trigger points for orderly retreat given the lack of safety zones. Have a plan for disengagement that establishes a designated meeting point and maintains accountability of resources.

## Driving

Driving may be one of the most 'taken for granted' activities we engage in. Traffic accidents are rapidly becoming one of the top causes for firefighter injuries and fatalities. Use ALL safety equipment; seat belts, frequently check your mirrors, keep lights on and always use a spotter in all circumstances with blind spots. Practice good road SA. Anticipate vehicles on blind curves, maintain proper speed for conditions, look where you want to go, not where you are. Mark known driving hazards, communicate turn-around sites and manage flow of traffic. If in doubt, SLOW DOWN. Leave the cell phone in your pocket and avoid other items/activities that compete for your attention.

*The things that lead up to accidents happen slowly-The accident happens fast.*

SAFETY OFFICER: Troy Corn, Jack Cates

# Crocketts Knob Fire – Sensitive and Invasive Plants

Exemption – in the event that life or property is threatened, violating the following guidance is acceptable, provided that the suppression action is expected to mitigate the risk.

## Sensitive and Invasive Plants

- Minimize fire operations impacts:
  - Do not use mechanized equipment for fireline construction at known Sensitive plant locations.
  - When possible, avoid building fireline over lithosol (scab lands)
  - Consult with READ for clarification of fire suppression activities that may have a detrimental impact.
- Why is this important:
  - Invasive plant species out compete native plants for resources such as sunlight and water reducing species diversity.
  - Reduce forage availability on forest
  - Reduce soils stability and increase erosion
  - Often these invasives increase fire spread potential.
  - Extremely difficult to eradicate once established

# Human Resource Message

**Crockets Knob Fire - August 31, 2022**

## **STANDING TOGETHER AGAINST HARASSMENT**

**All employees, cooperators, contractors, and volunteers who participate in incident support are responsible to treat one another with respect and to maintain a work environment free of harassment and hostility.**

Even one-time acts of harassment can be severe and pervasive. The law does not prohibit simple teasing, offhand comments, or isolated incidents but it becomes illegal when the harassment is frequent and if it creates a hostile work environment.

It is the “impact of the behavior,” not the intent that matters when you are talking about discrimination, including sexual harassment. This means that an unsolicited shoulder rub, touching of any kind, or a harmless joke can contribute to a hostile work environment or sexual harassment.

Remember the primary purpose you are assigned to an incident. Take responsibility for your actions and behaviors. Live by the following simple guideline: “If in doubt, don’t do it.” We will hold any employee who engages in harassing behavior accountable.

For more information regarding harassment, or if you have any concerns or issues, talk with your supervisor, or contact human resources on this incident. You may also contact the **Harassment Reporting Center at: 844-815-8943.**

We can only act when we are aware of the behavior and encourage anyone who experiences or witnesses’ harassment to report it immediately.
