Comments /notes on tonight's mission and this interpretation: I started interpretation with yesterday's IR perimeter. I did some minor orthorectification due to the fact that a spot check showed the georeferencing to off very slightly in some locations. The heat perimeter only grew slightly, and that growth mostly occurred where unburned islands were filled in in the interior of the perimeter. It continues to cool off and shows very little intense heat, much of which is on the interior of the perimeter.
