## Fire Behavior Forecast # 07

<b>Name of Incident:</b> Double Creek, Nebo, Sturgill & Goat2	<b>Administrative Unit:</b> OR-WWF
<b>Date &amp; Time Issued:</b> September 8, 2022 @ 2000	<b>Operational Period:</b> DAY 09/09/2022 (24 hr.)
<b>FBAN:</b> Steve Ziel	<b>Signed:</b> /z/

**Assumptions:** *Expect generally moderated fire behavior today – BUT, we have all the ingredients that may combine to produce very active fire behavior today/ tonight – steep slopes, dry fuels, and peak of season conditions (97<sup>th</sup> percentile ERC). Aligned ridges, and north- northeast aspects will be exposed to winds - lower slopes/river areas have wind alignment localized effects with northerly flow; expect downslope winds in the late evening. Likely active burning conditions between 1200-2000. Active spread in grass fuels may be expected in until humidity reaches 50% during late night/early morning. Live fuels and cured grasses are contributing to fire behavior producing rapid spread rates. Our fires cover a large geographic area – watch for localized influences.*

### Weather Summary

\*See attached Fire Weather Forecast

### Fire Behavior Summary

**Fuels in the fire area** are primarily composed of *Grass/Shrub, Grass, Timber Litter, and Timber with Understory*. Primary tree species include mixed sizes of Douglas Fir, Ponderosa Pine, sub-alpine fir, with scattered True Fir. Local timber litter is compact to fluffy. Brush and understory species are variety of shrub types, and dog-hair conifer thickets. Snags and heavy fuel concentrations are common throughout all forested areas. Most harsh/dry site grasses are fully cured. Fuel conditions change by elevation, and aspect. Low crown base height (ladder fuels) and lichen/moss are present in high elevation timbered areas.

**Today's potential fire activity** may include *active fire behavior including wind/slope aligned fire spread on slopes and ridges. Group torching with short-range spotting may accelerate rate of spread. Primary spread mechanism includes backing/flanking, and upslope runs. Fire activity may continue into the evening as upslope/down slope wind transition to diurnal down valley sundowner winds. Dangerous rates of spread in grass and grass/shrub fuels may develop with wind/slope alignment. Timber fuels will produce high intensity fire behavior Expect localized (squirrely) wind effects to influence fire behavior in drainages, and on lee-side of ridges.*

\* **Fine fuel moisture= 3-5%, 1000hr. moisture=10%, Woody fuels 120%, Probability of Ignition-70-90%**

Fuel Type	Rate of Spread	Flame Length	Spotting Distance	*50 MPH "Outflow" GUSTS*	
				ROS	FL
...If your work area includes -	(CH/HR = FPM)	Feet	Miles		
Grass-Shrub (GS2)	30	6			
Timber w/ Understory (TU5) Heavy	12	8	.4		
Grass (GR2) Harsh site cured	80	7			
Timber Litter (TL3) Heavy load litter	3	2			

### Specific Assignments:

**Br.I (Div. A/Z, Q, R)** – Wide range of backing gulches/draws along Imnaha River N&S that may become active. Expect robust spread in grass. Expect squirrely winds in Freezeout Creek and south. Div. R – expect progressive spread to the south on ridge to Neil Cyn.

**BR. II (Div. S, E)** – Lots of wind aligned broken terrain and ridges. Northerly wind provides new alignments for rapid spread in grass.

**Br. III** – Nebo fire -N. Fk. Sheep Cr. active flanking/head fire in Wing Ridge area. Lick Cr. likely to have active flare-ups. **Sturgill fire** – Active backing toward Minam River Chaparral Cr. Fire slopped over the lip ridge of Lostine drainage. Continued backing/flanking in N. Fk Minam River on the south end of the fire. Monitor Huckleberry Ridge and Goat2 activity.

**Air Operations:** Good day to fly, northerly air flow will provide view into areas previously obscured by smoke.

### Safety

**Review Standard Fire Orders.....1. Keep informed on fire weather conditions and forecasts. 2. Know what your fire is doing at all times. 3. Base all actions on current and expected behavior of the fire.**

Warmer and dryer weather result in decreased fine fuel moisture. Ignition of fine fuels causes fire spread. Spreading fire requires decisions and actions that require clear thinking, good judgement and assurance that LCES is in place. Good firefighters make good decisions – work smarter not harder.

*\*Today's Fire Behavior Forecast contains 737 (-81 from previous) words written for your situational awareness.*

# Short-Haul Operations

## CAPABILITIES

- During an operational Short-Haul the helicopter is capable of inserting Short-Haulers into an area with tight canopy cover and/or technical terrain.
- Haul line lengths range from 100 feet to 350 feet.
- Short hauler and/or medical gear can be delivered to the medical scene even if extraction by short-haul is not necessary.

## ORDERING

- EMT or Medical Incident IC determines medical extraction is required.
- Follow local established procedures and/or Medical Incident Report (MIR) in the IRPG.
- Confirm aircraft type, call sign, estimated time of arrival and frequency.
- Give site selection information when ordering: hazards (i.e. ash, smoke, snags, aerial), tree height, terrain, and patient transport configuration (supine or seated position). Repeat hazards and give updated weather conditions as well as brief patient update to responding helicopter.

**PROCESS:** The helicopter will fly to the coordinates provided. They will make contact with ground personnel on scene with the patient using an identified air-to-ground frequency. The helicopter will complete a short-haul recon and size up, gather patient update information and then fly to a landing zone (LZ) to configure for short-haul operations. The helicopter will be monitoring the appropriate air-to-ground, air guard and victor frequencies. From this point, ground resources should only contact the helicopter in case of an emergency. During the insertion and extraction process ground personnel must be clear of the area.

## ON SCENE: EXPECT THE FOLLOWING

- 1 or 2 rescuers (at least one qualified as an EMT or higher)
- Backboard (if needed and not already on scene)
- All equipment necessary for patient extraction

The Patient Extraction Bag accommodates most backboards.  
-A patient on a backboard, TRS, SKED or litter will be inserted into the bag.

The Seat Harness is used for patients not requiring the use of a backboard.

**INCIDENT:** Double Creek

**DATE:** 9/9/2022

**Major Hazards & Risk:** Working around Powerlines, Potential for Extreme Fire Behavior, Gravity Hazards

*The Intent Of LCES*

**Lookouts    Communication    Escape Routes    Safety Zones**

**Adequate vs “In Place”:** *Are you making LCES a simple checklist for the entire shift? Does your plan fit the expected worse conditions of the day? Will LCES in your mind fit the actual fire conditions when you need it?*

**Dynamic Fire Requires Dynamic LCES:** *How will you identify critical changes in the fire environment while managing today’s tasks? When new resources join the module or division, who will tell them the plan? Have you identified options for escape routes that will work for different fire movement? Are the routes clear and known for all resources, including equipment?*

**Judgement:** *Your judgment, developed by your experience, is the final determination about adequate LCES. When we look at tragedy fires, we search for understanding and lessons to prevent future tragedies. Were safety measures disregarded? Was LCES absent? Maybe the actual fire environment was different than what was perceived. Maybe they missed changing conditions and continued to use the same safety measures despite a changed situation. **It can happen to each of us.***

<p>What is the WCS (Worst Case Scenario)?          Is my LCES adequate?          What’s changing right now?          What might change later?</p> <p>© 2004-2009 Brad Mayhew          www.FirelineFactors.com</p>	<p>F → WCS?          LCES → Adequate?          Δ → Right now? **FIREFIGHTER RISK ASSESSMENT PLACARD**

# INSTRUCTIONS

Place this placard in a conspicuous location at the end of the driveway. Write LARGE enough to see it from your engine seat at the road.

Top Quadrant is for the address number and the defensible risk to assigned resources based on current and expected fire behavior and the structure protection checklist.

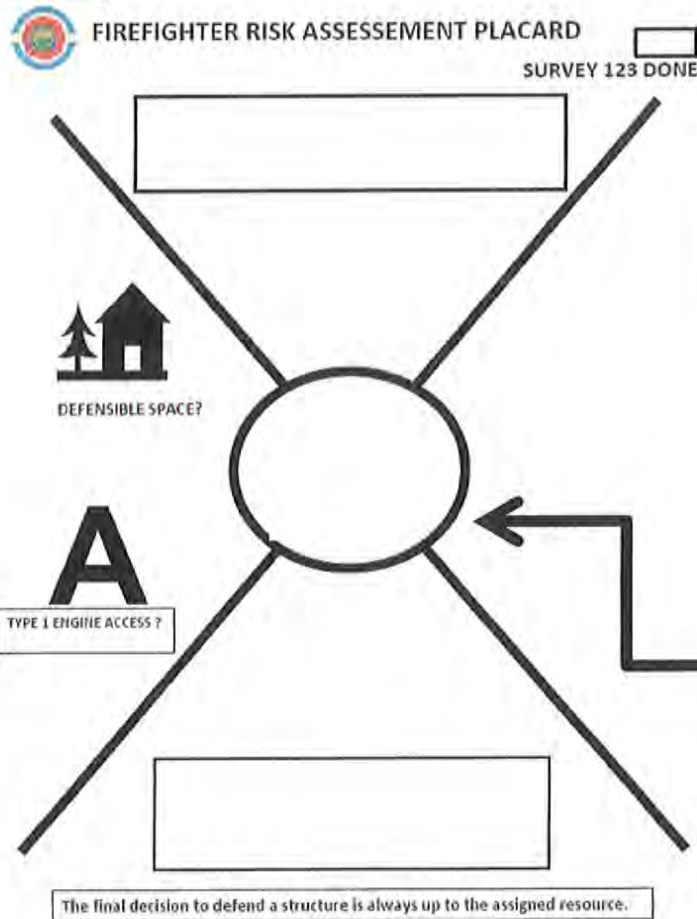

L= Low -, Stand alone

M=Moderate-, Prep and Hold

H= High- Prep and Go

E= Extreme - Check and Go

Check if SURVEY 123 has been completed.

This quadrant is for the Date the assessment is done, and Designator – your TF number and Unit ID number.

The center circle is for indicating structure prep. If no prep is done leave it blank. If SURFACE PREP has been completed Mark a large letter S in the circle. If FULL PREP has been completed completely color in the circle.

This quadrant identifies if there is an adequate defensible space around the structure. If YES- Circle the icon if NO cross the icon out

This is also an area to signify if a TYPE 1 ENGINE can access the structure and has an adequate turn around.

The bottom quadrant is for identifying the length of the driveway to the structure. This section also is for indicating special circumstances or hazards present examples include:

**PTS** = There is a Portable Pump, Tank and Sprinkler Kit present.

**W** = There is a viable water source at this address.

**SZ** or **TRA** = There is a **SAFETY ZONE OR TEMPORARY REFUGE AREA** present.
