Protect values along the Imnaha corridor. • <u>Nebo</u>: Keep fire west of 39 Cloverdale Road. Limit spread north toward values outside of the wilderness. • <u>Sturgill</u>: Protect values in Minam Lodge and Reds Horse Ranch by monitoring fire growth and using firing and suppression actions on Big Sheep Ridge to minimize growth to the northwest. Monitor spot fires in Goat Creek and Goat 1 & 2.

Fire Behavior Forecast # 10

Name of Incident: Double Creek, Nebo, Sturgill & Goat2	Administrative Unit: OR-WWF
Date & Time Issued: September 11, 2022 @ 2000	Operational Period: DAY 09/12/2022 (24 hr.)
FBAN: Steve Ziel	Signed: /z/

Assumptions: *Cloud cover over smoke layer – maybe no shadows today. Southwesterly winds today – a little cooler with higher RH. But - we still have all the ingredients to produce moderate-to-active fire behavior today/ tonight – steep slopes, dry fuels, and peak of season conditions. Aligned ridges, and south facing aspects will be exposed to lighter winds - lower slopes/river areas may have localized channeling effects; expect downslope winds late evening. Favorable burning conditions between 1200-2200. Rapid spread in grass fuels may be expected in until humidity is > 50% during late night/early morning (hint: unlikely). Live fuels and cured grasses are contributing to fire behavior. Our fires cover a very large geographic area – watch for localized influences.*

Weather Summary

*See attached Fire Weather Forecast

Fire Behavior Summary

Fuels in the fire area are primarily composed of *Grass/Shrub, Grass, Timber Litter, and Timber with Understory*. Primary tree species include mixed sizes of Douglas Fir, Ponderosa Pine, sub-alpine fir, with scattered True Fir. Local timber litter is compact to fluffy. Brush and understory species are variety of shrub types, and dog-hair conifer thickets. Snags and heavy fuel concentrations are common throughout all forested areas. Most harsh/dry site grasses are fully cured. Fuel conditions change by elevation, and aspect. Low crown base height (ladder fuels) and lichen/moss are present in high elevation timbered areas.

Today's potential fire activity may include active fire behavior including wind/slope aligned fire spread on slopes and ridges. Group torching with short-range spotting may accelerate rate of spread. Primary spread mechanism includes backing/flanking, and upslope runs. Fire activity may continue into the evening with low humidity. Dangerous rates of spread in grass and grass/shrub fuels may develop with wind/slope alignment. Timber fuels will produce may produce high intensity flare-ups with group torching and spotting. Expect localized (squirrely) wind effects to influence fire behavior in drainages, and on lee-side of ridges.

* **Fine fuel moisture= 5-7%, 1000hr. moisture=10%, Woody fuels 120%, Probability of Ignition-70-90%**

Fuel Type	Rate of Spread (CH/HR = FPM)	Flame Length Feet	Spotting Distance Miles	*50 MPH "Outflow" GUSTS*	
				ROS	FL
...If your work area includes -					
Grass-Shrub (GS2)	18-20	4-5			
Timber w/ Understory (TU5) Heavy	7-9	7	.2		
Grass (GR2) Harsh site cured	40-45	5			
Timber Litter (TL3) Heavy load litter	2	2			

Specific Assignments:

Br.I (Div. A/Z, Q, R) – Wide range of backing gulches/draws along Imnaha River N&S that may become active. Expect active spread in grass. Expect variable winds in Freezeout Creek and south. Div. R – expect progressive spread to the south on ridge to Neil Cyn.

BR. II (Div. S, E) – Lots of wind aligned broken terrain and ridges. Southerly wind alignments for active spread in grass on ridges.

Br. III – Nebo fire -N. Fk. Sheep Cr. flanking fire in Wing Ridge area. Lick Cr. likely to have active flare-ups. **Sturgill fire** – Active backing toward Minam River in Chaparral Cr. bowl. Fire slopped over the lip ridge of Lostine drainage. Continued backing/flanking in N. Fk Minam River on the south end of the fire. Monitor southwest wind effect activity on Huckleberry Ridge and Goat2.

Air Operations: Cloud layer developing over smoke layer, persistent smoke may hang in valley locations.

Safety

Not a day to drop your guard..... Unexpected flare-ups are possible, multiple flare-ups may occur with unburned fuel pockets and a little wind. Multiple simultaneous flare-ups become critical without LCES. Plan ahead for actions to take; travel takes time!! Review the Watch Out Situations with your resources– can you mitigate?? Lined to unlined only takes one ember.

*Today's Fire Behavior Forecast contains 737 (-103 from previous) words written for your situational awareness.

Short-Haul Operations

CAPABILITIES

- During an operational Short-Haul the helicopter is capable of inserting Short-Haulers into an area with tight canopy cover and/or technical terrain.
- Haul line lengths range from 100 feet to 350 feet.
- Short hauler and/or medical gear can be delivered to the medical scene even if extraction by short-haul is not necessary.

ORDERING

- EMT or Medical Incident IC determines medical extraction is required.
- Follow local established procedures and/or Medical Incident Report (MIR) in the IRPG.
- Confirm aircraft type, call sign, estimated time of arrival and frequency.
- Give site selection information when ordering: hazards (i.e. ash, smoke, snags, aerial), tree height, terrain, and patient transport configuration (supine or seated position). Repeat hazards and give updated weather conditions as well as brief patient update to responding helicopter.

PROCESS: The helicopter will fly to the coordinates provided. They will make contact with ground personnel on scene with the patient using an identified air-to-ground frequency. The helicopter will complete a short-haul recon and size up, gather patient update information and then fly to a landing zone (LZ) to configure for short-haul operations. The helicopter will be monitoring the appropriate air-to-ground, air guard and victor frequencies. From this point, ground resources should only contact the helicopter in case of an emergency. During the insertion and extraction process ground personnel must be clear of the area.

ON SCENE: EXPECT THE FOLLOWING

- 1 or 2 rescuers (at least one qualified as an EMT or higher)
- Backboard (if needed and not already on scene)
- All equipment necessary for patient extraction

The Patient Extraction Bag accommodates most backboards.
-A patient on a backboard, TRS, SKED or litter will be inserted into the bag.

The Seat Harness is used for patients not requiring the use of a backboard.

SAFETY MESSAGE
Pacific Northwest Incident Management Team 2

INCIDENT: Double Creek

DATE: 9/12/2022

Rear View Mirrors Adjustment

First, forget how we learned to adjust our outside mirrors by plopping behind the steering wheel and turning the mirrors so that we just saw the side of our car looking back at us in the mirrors.

Instead, adjust the driver's side mirror by resting your head against the driver's side window and then turning the mirror so that you just see the side of your car.

Once this is set, move to the center of the vehicle and turn the passenger side mirror so that you can just see the side of your car from the center of the vehicle.

That's it. You won't see your own car in either mirror, yet what you will see is far better. Cars behind you show up as usual in the inside rear-view mirror above the dash, but the instant the car leaves your field of vision from the rear-view mirror the outside mirror picks it up. No blind spot; no delays; no wondering where that car about to pass you has disappeared to, and no waiting a few seconds for the car that you just saw in your rear-view mirror to show up in your outside mirrors.

All three mirrors work in harmony with one another, and the blind spot has been eliminated!

Source: National Safety Council, Defensive Driving Course

Experiment with this and don't use it in high volume or high-speed traffic until you are comfortable with it.

Safety Officers: Marshall Brown/Rob Poyner/Mark Munns/Jeb Koons

NEW SIDE MIRROR POSITION -

(YOU LOOK ALONG THE ROAD, NOT THE SIDE OF YOUR CAR)

turn your mirrors out - make sure you see the road, not the side of your car

you get only 4 small blind zones

you can see other traffic sooner and for longer

Double Creek Fire Virtual Demob Process

If your Demob method of travel is by air, contact DMOB at (206) 718-0358 72 hours in advance of your last work day.

On Your Last Work Day:

Contact **FINANCE 24 hours** prior to give them a heads-up you are departing:

- Personnel (971) 346-6580 Equipment: (541) 314-4411
- Turn in any outstanding or travel CTR/Shift Ticket. Make sure they are **SIGNED**.
- Confirm no missing financial documentation

Day of Demob STEP 1:

Contact DMOB at **(206) 718-0358** to activate your virtual Check-Out and to determine your specific next steps since we are pre-clearing personnel that do not have any supplies or communications equipment checked out.

STEP 2:

Have your vehicle “weed washed” near Ground Support.

STEP 3 (if directed by DMOB):

SUPPLY – see in person to return issued gear and leftover supplies

COMMUNICATIONS – see in person to return any communications equipment

GROUND SUPPORT – see in person to return incident rental vehicles, get an inspection, etc.

WEED WASH - All vehicles and equipment must use the weed wash before demob to prevent the spread of noxious invasive weeds.

Other Considerations:

- Turn in any Unit Logs and Evaluations to Plans (Documentation Box)
- If you have an I-Pad issued on the fire, return it to the Situation Unit

STEP 4:

Contact **FINANCE** to finalize your paperwork:

- Personnel (971) 346-6580 Equipment: (541) 314-4411
- Complete time closeout process with Finance and **receive your signed OF-288 and/or OF-286 BEFORE contacting DMOB for final closeout.**

STEP 5:

Contact **DMOB at (206) 718-0358 for final closeout**

- DMOB will verify check-out completion
- Be prepared to address your actual departure date/time; your anticipated arrival date/time; and where you will be staying overnight if travel includes overnight stops.

VIRTUAL CREW SWAP/EXTENSION

- Two options exist for virtual crew swaps: you can call Double Creek Check-in at (206) 795-6379 or DMOB at (206) 718-0358, to provide the crew swap information verbally; or utilize the QR code on the IAP cover to electronically provide the crew swap information.
- A signed Extension Request Form is required to extended existing resource crew members on the fire and is initiated through your supervisor on the incident
- Call Double Creek Check-in at (206) 795-6379 or DMOB at (206) 718-0358, for questions/concerns regarding check-in, crew swaps, extensions and DMOB.

INSTRUCTIONS

Place this placard in a conspicuous location at the end of the driveway. Write **LARGE** enough to see it from your engine seat at the road.

Top Quadrant is for the address number and the defensible risk to assigned resources based on current and expected fire behavior and the structure protection checklist.

L= Low -, Stand alone

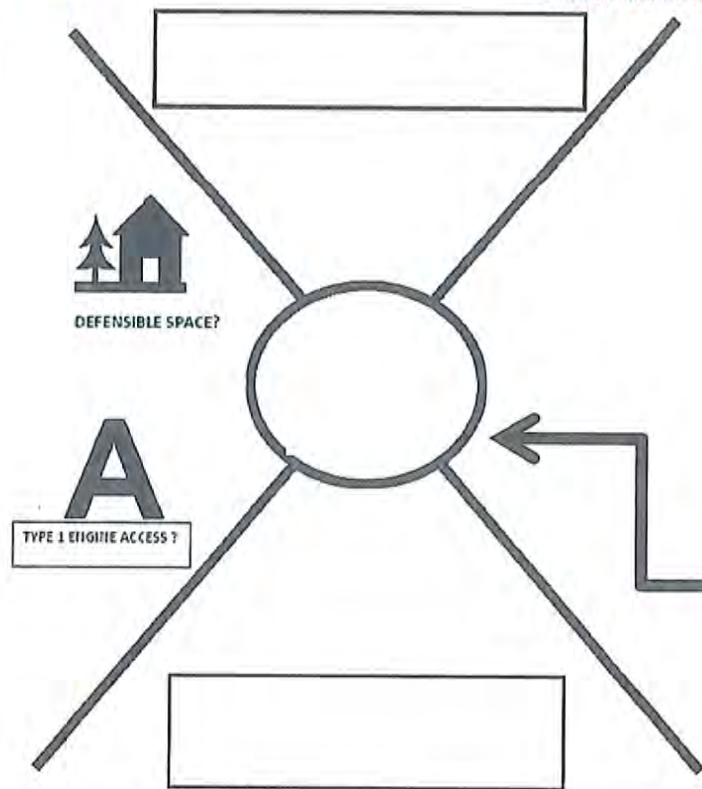

M=Moderate-, Prep and Hold

H= High- Prep and Go

E= Extreme - Check and Go

Check if SURVEY 123 has been completed.

FIREFIIGHTER RISK ASSESSEMENT PLACARD

This quadrant is for the Date the assessment is done, and Designator – your TF number and Unit ID number.

The center circle is for indicating structure prep. If no prep is done leave it blank. If **SURFACE PREP** has been completed Mark a large letter **S** in the circle. If **FULL PREP** has been completed completely color in the circle.

This quadrant identifies if there is an adequate defensible space around the structure. If **YES**- Circle the icon if **NO** cross the icon out

This is also an area to signify if a TYPE 1 ENGINE can access the structure and has an adequate turn around.

DEFENSIBLE SPACE?

TYPE 1 ENGINE ACCESS?

The final decision to defend a structure is always up to the assigned resource.

The bottom quadrant is for identifying the length of the driveway to the structure. This section also is for indicating special circumstances or hazards present examples include:

PTS = There is a Portable Pump, Tank and Sprinkler Kit present.

W = There is a viable water source at this address.

SZ or **TRA** = There is a **SAFETY ZONE OR TEMPORARY REFUGE AREA** present.

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON-SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° - 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° - 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		Brief Summary of Injury or Illness <i>(Ex: Unconscious, Struck by Falling Tree)</i>
