INCIDENT: Bolt Creek

DATE: 10/05/22

TIME: ALL

Major Hazards and Risks: Driving, Hazard Trees, Steep Terrain, Rolling Materials, Rugged Access,

Heavy Equipment Operations, Cumulative Fatigue.

- <u>Hazard Trees</u> are a common issue on the Fireline where we work hard to keep up our situational awareness and mitigate those hazards. *Situational Awareness* doesn't stop at the edge of the fire! In the Team's past experiences here, near misses with snags occurred, a couple not on the actual fire line.
- <u>Powerlines-</u> Fire activity near high voltage electrical lines can cause serious injuries to a firefighter. Be aware of your surroundings, lookup and communicate any identified powerlines to your crewmembers. Contact your supervisor or the local power company when lines are threatened or involved. Review your IRPG on powerline safety.
- <u>Situational Awareness</u>- In addition to keeping tabs on your assignment, working environment, coworkers and adjoining forces, remember another situation to be aware of is your crew's level of complacency. Complacency leads to "Normalization of Deviance" which can lead to accidents.
- The potential for active fire behavior- As mentioned previously in the briefings, the potential for active fire behavior is more than present should a breakout or spot fire occur. Dealing with break outs or growing spot fires is just another form of initial attack. Keep up your situational awareness and practice your L.C.E.S always.
- <u>Complacency</u>- We are fast approaching a static state in fire operations. Stay alert and monitor the current and expected weather and fire behavior. Be mindful of what it is that you are doing, at all times. Safety is a matter of common sense, using it will keep yourself and others out of trouble and get the job done safely.

SAFETY IS
