## HEALTH AND SAFETY MESSAGE

INCIDENT: Bolt Creek

DATE: 10/06/22

TIME: ALL

**Major Hazards and Risks: Driving, Hazard Trees, Steep Terrain, Rolling Materials, Rugged Access, Heavy Equipment Operations, Cumulative Fatigue.**

### Transition Day

- There is a high potential for fatalities, serious injuries, or other incidents during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—  
Lookout, Communications, Escape Routes, and Safety Zones.

### Factors for increased risks to fire line personnel during transition periods include

- No, or poor, briefing of incoming personnel
- Lack of fire weather and behavior information, both forecast and observed
- Communications: face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.
- Not all Resources know who is in command.

### Mitigation actions to take

- Lookouts: Post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.  
Utilize the Incident Response Pocket Guide transition checklist.
- Situational Awareness: In addition to keeping tabs on your assignment, working environment, coworkers, and adjoining forces, remember another situation to be aware of is your crew's level of complacency. Complacency leads to "Normalization of Deviance" which can lead to accidents.
- Night Operations: Don't work alone. **Focus on critical tasks.** Review the area in daylight. Protect drivers from fatigued operations. Watch for hazard trees, Hwy. 2 and. IWI ready?
