3. Objective(s):			
Management Objectives			
<ul style="list-style-type: none"> Provide for firefighter and public safety using ongoing risk analysis and reasonable mitigation of identified hazards. Minimize impacts to communities and infrastructure, and minimize acres burned on private lands along Highway 2 corridor. Maintain and enhance relationships with cooperators, stakeholders, landowners, and communities. Provide accurate and timely information to the public. Protect tribal, cultural, aquatic, and wildlife resources and sensitive plant sites by coordinating with Resource Advisors. Treat each other with dignity and respect and act professionally on the fire and in the community. Manage costs commensurate with values at risk and update Agency Administrators daily. 			
Control Objectives			
<ul style="list-style-type: none"> Maintain the fire north of Highway 2 utilizing the existing suppression strategy to stop the fire spread to at-risk values. To control fire, utilize complete suppression and point protection strategies in areas around structures and values. Keep fire east of Index-Galena Road (FR63) and west of Beckler Creek Road (FR65). Continue to monitor the fire in the wilderness, only taking action to maintain a fire within the identified east/west parameters. 			
4. Operational Period Command Emphasis:			
<ul style="list-style-type: none"> Provide a positive presence to the community and the public impacted by the fire. As the safety of personnel is our highest priority, continually use a deliberate analysis of risk as you engage the fire. <p>Communicating the risks and problems you identify and considering the actions you can take to improve or manage the issue is crucial.</p> <ul style="list-style-type: none"> Review your LCES in all areas of your work environment. Take 10 minutes as a crew to review your communications in the work area, identify escape routes that will lead you to safety if conditions change, and evaluate the safety zones to ensure they are adequate for you, your crew, and other resources. Be aware of values at risk inside and adjacent to the fire perimeter. Engage and suppress fire when safe, and employ appropriate tactics for the situation. 			
General Situational Awareness:			
See attached Fire Weather.			
Expect increased traffic on Hwy 2. Use spotters and additional lookouts. Avoid placing personnel or equipment on the roadway unless necessary.

Fire Behavior Forecast # 08

Name of Incident: Bolt Creek	Administrative Unit: WA-NWS
Date & Time Issued: October 16, 2022 @ 1900	Operational Period: DAY/NIGHT 10/17-18/2022 (0700-0700)
FBAN: Steve Ziel	Signed: /z/ <i>[Signature]</i>

Assumptions: *Another day of "abnormally warm and dry" weather – it is still fire season in the middle of October. We continue to have all the ingredients for very active fire behavior due to low RH, abundant dry fuels, and numerous heat sources across a large area. Expect favorable burning conditions between 1300-1800 during peak heating, and best air mixing. All fuels are very dry, leaves are falling, and the shrubs are entering dormancy. The combination of wind, temperature, humidity, and a heat source may result in very active fire behavior. Southerly aspects are remaining sunny, while north aspects are gaining shadow time.*

Weather Summary

*See attached Fire Weather Forecast

Fire Behavior Summary

Fuels in the fire area are primarily composed of *Timber Litter*, and *Timber with Understory*. Primary tree species include mixed sizes of Douglas Fir, Western Hemlock, with scattered cedar. Local timber litter is compact to fluffy with green moss. Shrub and understory species include mixed hardwoods, and dog-hair conifer thickets. Large snags and heavy fuel concentrations are common throughout all areas. Live woody fuels are marginally contributing to fire rate of spread and fire intensity. Fuel conditions change by elevation, and aspect. Low crown base height (ladder fuels) and thick moss are present in most of the timbered areas. *Lots of hardwood leaf litter.*

Today's potential fire behavior will likely include areas transitioning from smoldering/creeping to active surface fire spread with flare ups and occasional torching. Primary spread mechanism includes flames creeping into unburned fuels that result in moving fire and flare ups. Wind/slope alignment on may contribute to flare ups with torching and short head fire runs with spotting. Fire activity may extend later on southwest aspects (warmer, dryer, longer). High re-burn/re-ignite potential where fuels have lightly burned and in patchy burn areas. Moss may contribute to torching and snags may fall causing flare-ups.

* **Fine fuel moisture= 6%-9%, 1000hr. moisture=12%, Woody fuels 190%, Probability of Ignition-40%-60%**

Fuel Type	Rate of Spread (CH/HR = FPM)	Flame Length Feet	Spotting Distance
...If your work area includes -			
Timber Litter (TL5) Heavy	3-5	2	0.1 mi.
Timber w/ Understory (TU5) Heavy	6-8	6-8	0.1 mi.
Timber w/ Understory (TU2) Moderate	7-9	3-4	0.1 mi.

Specific Assignments:

- Div. A** – Monitor fire activity on lower slopes for flare-ups. Expect increased activity in freshly burned areas north of Skykomish for due to river flow winds. Monitor Beckler River corridor, and SW/SW Sec. 6 below 6510 for flare ups and rekindle in ratty burn areas.
- Div. S** – Monitor flanking/backing on Heybrook Ridge, and 6022 Rd. (Sec. 26), and increased activity in lower Barclay Creek (Sec. 35).
- Div. P** – Monitor Hwy 2 corridor for flare ups. Expect areas of re-burn. Expect rolling materials on steep slopes in the tunnel area.
- Div. Z** – Expect continued flare ups, and areas of unburned fuels to consolidate in the Eagle Rock, and upper Eagle Creek area.

Air Operations: Moderate inversion breaking by mid-morning. Expect hazy/smoky conditions due to local fires.

Safety

Isolated flare-up are possible in areas that have not shown activity for a couple days. Snags may fall into fresh fuel. Winds may kindle smoldering fuels to flame.

Good opportunity to review and discuss some "what if's???.....". Ensure all parties know what to do, where to go "IF" something happens.

Base all actions on current and expected behavior of the fire (evaluate your situation, and the fire activity – anticipate rate of change, consider "what-if's", establish trigger points).

SAFETY MESSAGE

Snags and Green Tree Hazards

Snag and Hazard Tree Recognition: Is it burning?

Does it present a control

problem? Does it present a Safety Hazard?

Are winds forecasted?

Flag those trees that are hazardous to fire fighters.

Inform others of their location.

Review "Hazard Tree Safety" (IRPG pg.22)

**Be Alert. Keep Calm.
Think Clearly. Act Decisively.**

Secure-The line

Use all required PPE including eye protection. Pump operators should use hearing protection

Evaluate unburned islands and mitigate hazard trees

Maintain proper spacing and overhead clearance

Driving - Slow Down!

Always Wear Your Seat Belt Always Drive with LIGHTS ON

Follow at a safe distance and park off roadways. Watch for recreational traffic

Fatigue and Hydration

Crew leaders stay aware of your crews' condition and your own. Crew leaders

watch for fatigue and keep your crew members and yourself hydrated. Drink water

before, during and after shifts. During long hikes to and from fire area and along the fireline take enough breaks to ensure that each crew member stays in a healthy condition.

See medical unit for treatment of blisters, nicks and scratches.

Tip of the Day:

"Chocolate milk may be one of the best post-exercise recovery drinks, according to new research presented at the American College of Sports Medicine conference. In a series of four studies, researchers found that drinking fat-free chocolate milk after exercise can help the body retain, replenish and rebuild muscle to help the body recover. Drinking low-fat chocolate milk after a strenuous workout could even help prep muscles to perform better in a subsequent bout of exercise."

ENSURE LCES IS IN PLACE PRIOR TO ENGAGEMENT
