Slightly better humidity recoveries tonight with lighter winds compared to this morning.

WEATHER FORECAST:

WEATHER: Mostly sunny. Areas of smoke in the morning, clearing in the afternoon.

MAX TEMPERATURES: 69 to 75 ridges and upper slopes; 76 to 82 lower slopes and valleys.

MIN HUMIDITY: 29 to 39 percent, lowest values in Div A.

Fire Behavior Forecast # 04

Name of Incident: Bolt Creek	Administrative Unit: WA-NWS
Date & Time Issued: October 12, 2022 @ 1900	Operational Period: DAY/NIGHT 10/13-14/2022 (0700-0700)
FBAN: Steve Ziel	Signed: /z/

Assumptions: *Continued "warming and drying" pattern will produce moderate-to-active fire behavior potential across the fire area. We have all the ingredients for an "observable increase" in fire behavior due to abundant low RH, dry fuels, and heavy fuel loading. Expect the most favorable burning conditions between 1300-1800. Persistent burning conditions may be expected in heavy fuels, deep duff, and concentrations. Lower slopes/river areas may remain smoke sheltered through the period with fair night time humidity recovery, while upper slope recovery will also be fair. Monitor lower slope and river winds for early morning easterly flow followed by westerly flow, returning to easterly flow overnight. Same smoldering - more creeping and surface fire spread today.*

Weather Summary

*See attached Fire Weather Forecast

Fire Behavior Summary

Fuels in the fire area are primarily composed of *Timber Litter*, and *Timber with Understory*. Primary tree species include mixed sizes of Douglas Fir, Western Hemlock, with scattered cedar. Local timber litter is compact to fluffy with green moss. Shrub and understory species include mixed hardwoods, and dog-hair conifer thickets. Large snags and heavy fuel concentrations are common throughout all areas. Live woody fuels are marginally contributing to fire rate of spread and fire intensity. Fuel conditions change by elevation, and aspect. Low crown base height (ladder fuels) and thick moss are present in most of the timbered areas. **Lots of hardwood leaf litter.**

Today's potential fire behavior will generally consist of "smoldering and creeping" – but may include pockets of surface fire spread with isolated flare ups and occasional torching. Primary spread mechanism is flames creeping into fresh fuels. Wind/slope alignment on upper slopes and along drainages may contribute to increased surface fire spread. Areas of backing, and flanking (lateral) spread may increase in the afternoon with warmer/drier conditions, and sunshine. Fire activity may extend into the evening due to low daytime humidity, and easterly wind flow during the late night.

* Fine fuel moisture= 6%-9%, 1000hr. moisture=12%, Woody fuels 190%, Probability of Ignition-30-50%

Fuel Type	Rate of Spread (CH/HR = FPM)	Flame Length Feet	Spotting Distance	20 MPH Gusts FPM
...If your work area includes -				
Timber Litter (TL5) Heavy	2-3	2		
Timber w/ Understory (TU5) Heavy	4-6	4-5		
Timber w/ Understory (TU2) Moderate	5-6	2-3		

Specific Assignments:

Div. A – Monitor fire activity on lower slopes for flare-ups. Expect continued activity in private parcel (Sec. 26) north of Skykomish with river influence winds. Potential slope reversal near the section 1 and 6 line crossed 6510 Rd.

Div. S – Monitor flanking/backing on Heybrook Ridge and 6022 Rd. (Sec. 26), and increased activity in lower Barclay Creek (Sec. 35).

Div. P – Monitor down canyon flow in morning, up canyon flow during the day. Expect rolling materials on steep slopes above Hwy. 2.

Air Operations: May be impacted by weak morning smoke inversion until 1100, then hazy with trapped smoke in deep valleys.

Safety

We will be experiencing "warming and drying" over the next several days. Due to the variety of aspects, elevations, fuel types, and local influences.....it will be important to monitor the rate and effect of drying in your area. Subtle changes in temperature and humidity will contribute to increased fire behavior – good opportunity to observe and anticipate fire behavior (be a student of fire).

Warmer and dryer weather result in decreased fine fuel moisture. Ignition of fine fuels causes fire spread. Spreading fire requires decisions and actions that require clear thinking, good judgement and assurance that LCES is in place. Good firefighters make good decisions – work smarter not harder.
