

INFRARED INTERPRETER'S DAILY LOG

Incident Name: White River WA-OWF-000319	IR Interpreter(s): Elise Bowne elise.bowne@usda.gov	Local Dispatch Phone: WA-CWC 509-884-3473	Interpreted Size: 10,772 Acres White River only Growth last period: 54 Acres
Flight Time: 2008 PDT Flight Date: 10/11/2022	Interpreter(s) location: Denver, CO Interpreter(s) Phone: 303-517-7510	GACC IR Liaison: Jim Grace GACC IR Liaison Phone: 541-771-4521	National Coordinator: Tom Mellin National Coord. Phone: 505-842-3845
Ordered By: WA-OWF 509-884-3473	A Number: A-112	Aircraft/Scanner System: N350FV/TK9	Pilots/Techs: Tech: Wren
IRIN Comments on imagery: 2 passes, alignment a little off		Weather at time of flight: Clear	Flight Objective: IR heat perimeter and heat sources
Date and Time Imagery Received by Interpreter: 10/12/2022 0400 PDT		Type of media for final product: IRIN Log, Shapefiles, File Geodatabase, KMZ, PDF Maps Digital files sent to: NIFS and FTP	
Date and Time Products Delivered to Incident: 10/12/2022 0628 PDT uploaded to NIFS 10/12/2022 0730 PDT uploaded to ftp site		https://ftp.wildfire.gov/public/incident_specific_data/pacific_nw/2022_Incidents_Washington/2022_White_River_WA-OWF-000319/IR/20221012	
Comments /notes on tonight's mission and this interpretation: Internet went down this morning and the replacement took a bit to be able to post maps, geodatabase and logs. Began with IR heat perimeter from the previous mission for both White River and Meander fires. White River – 10,772 acres mapped tonight, with 54 acres of growth Meander – 62 acres mapped tonight, with 12 acres of growth. The most growth was along the south edge of the incident where the heat moved across Soda Creek to the west. Some additional growth with intense heat mapped on the northernmost part of the incident where the heat is backing down the slope between the east fork of Canyon Creek and the White River. east of the east fork of Canyon Creek. There were many small areas of interior intense heat mapped tonight, along with some intense heat along the perimeter, usually associated with some heat perimeter expansion. Questions/Comments/Suggestions, please contact the interpreter using the contact information above. Meander fire appears to be growing to the east. The data was uploaded to NIFS, and included in the geospatial data, but it was not put on a map.
