Comments /notes on tonight's mission and this interpretation: Began with NIFS IR heat perimeter from 10/16/2022. IR Scan order for 10/17/2022 was UTF due to availability. Minimal heat perimeter growth. Small increases were made on the southwest perimeter at Fourteenmile Creek, Pheasant Creek, and Devils Club Creek. There was a small increase on the east perimeter, moving into the White River bottom, and near Canyon Creek. Overall, areas of intense, scattered, and isolated heat are reduced compared to the previous flight. There are no new isolated heat sources outside of the heat perimeter.
