Comments /notes on tonight's mission and this interpretation: Started interpretation with the NIFS perimeter from 10/15/2022 Intense heat and heat perimeter expansion on the southeast flank, expanding southwest downslope into the headwaters of Gate Creek. Intense heat associated with this growth included some imagery blooming. There was a little more perimeter expansion on the ridgetop toward Mad Lake, but not as much as yesterday. The eastern flank also saw modest expansion toward Marble Creek Camp and Marble Meadow, with associated intense heat. Isolated heat within the heat perimeter but near the boundary have been identified. There are two new isolated heat points south of Chikamin Ridge.
