WEATHER	NORTH FORK FIRE	09/1/2022 1800

A highly amplified upper ridge is developing across the Inland Northwest today and will remain in the region through Friday. Hot temperatures and a deep layer of dry air will allow for unstable conditions favorable for the growth and spread of fire. Though winds will be relatively light and terrain-driven, relative humidity will be low, with poor recovery during the overnight hours. Haze and smoke from local and regional fires will likely be present at times. A strong system will move through the region early this weekend, leading to higher relative humidity but stronger winds on Saturday.
