## INCIDENT OBJECTIVES (ICS 202)

<b>1. Incident Name:</b>		<b>2. Operational Period: DAY/NIGHT</b>	
FLAT/ANVIL		Date/Time From: 09/22/2023 0700      FRI	Date/Time To: 09/22/2023 2100      FRI
<b>3. Objective(s):</b>			
<p>Objectives (includes Flat and Anvil Fires):</p> <ol style="list-style-type: none"> <li>1) Expose firefighters to the least amount of risk necessary to accomplish work assignments during all phases of the incident.</li> <li>2) Limit fire size and control the fire perimeter to protect values at risk.</li> <li>3) Maintain and enhance relationships with stakeholders, cooperators, and partners.</li> <li>4) Provide accurate and timely incident information to the public utilizing inciweb, public meetings, and social media.</li> <li>5) Minimize adverse impacts to cultural, recreation, natural resources, watershed, wilderness, wildlife habitat, and local business concerns.</li> <li>6) Utilize strategic planning to develop implementation plans for a range of potential fire expansion scenarios.</li> <li>7) Support Rogue River-Siskiyou National Forest initial attack as requested by duty officers.</li> </ol> <p>Leaders Intent: Assigned incident responders will conduct themselves professionally in a way that encourages positive dialogue about hazard and risk evaluation and mitigation. This will be done across all areas of incidents from patrol and monitor to complex fireline engagement, indirect attack, and structure protection.</p> <p>Incident personnel are knowledgeable about the values at risk, public safety concerns, fireline hazards, risk analysis, and alternatives available for suppression actions.</p>			
<b>4. Operational Period Command Emphasis:</b>			
<p>Endurance is more important than speed in this profession. The ability to thrive through long shifts and repetitive work assignments and still be able to find the energy to rise to new challenges is the signature of endurance. Engage the pace that enables you to meet objectives and still have a little reserve energy in the tank just in case, not only today but for the rest of your tour on this fire and this fire season.</p>			
<b>General Situational Awareness:</b>			
<p>Preventing Normalization of Deviance Having identified the natural human tendency to accept shortcuts and rationalize those shortcuts under pressure and that the lack of bad consequences often reinforces the "rightness" of these shortcuts, what can firefighters do to ensure that they are not blindsided by this? Here are a few suggestions:</p> <ol style="list-style-type: none"> <li>1. Recognize our vulnerability to accept shortcuts under pressure,</li> <li>2. Execute to meet standards.</li> <li>3. Trust your instincts.</li> <li>4. Archive and review.</li> </ol>

## Fire Behavior Forecast #68

<b>Name of Incident:</b> FLAT and ANVIL	<b>Administrative Unit:</b> OR-RSF
<b>Date &amp; Time Issued:</b> September 21, 2023 @ 1900	<b>Operational Period:</b> September 22, 2023
<b>FBAN:</b> Steve Ziel	<b>Signed:</b> /Z/

**Assumptions:** Fuels will remain dry, until they get wet by the weekend. Westerly wind flow will provide upslope and up valley effect that may influence fire behavior today. Expect new wind alignments and drainage flow winds that may increase activity in areas previously unaffected – consider the effect of westerly winds. Active areas on Anvil fire will likely have new/different wind/slope alignments, and fire spread influences. Fire spread will depend on the effects of wind, otherwise slope and gravity spread will dominate the fire on lower slopes and valley locations. The Flat fire continues to have scattered heat sources.

### Weather Summary

See attached Fire Weather Forecast

### Fire Behavior Summary

**Fuels in the fire area** include very high load fluffy *Timber Litter (TL9)*, closed canopy *Timber Litter (TL5)* with needles, branches/heavy fuel concentrations, and large *Timber with Understory (TU5)* shrubby open timber canopy. Primary tree species include mixed sizes of Douglas Fir/mixed conifer timber stands. Shrub fields and understory species include Oregon Myrtlewood, maple(s), manzanita, other shrub-form hardwoods. **Numerous snags and heavy fuel concentrations (often shrub covered) are common throughout all areas.** Live fuels (shrubs) are seasonally dry and may contribute to fire spread. **Moss** is common in timber stands as a ladder/spotting fuel. **Gorse (highly flammable shrub)** is common in timber harvest areas, especially on west side of fire area.

**Today's "Peak Period" fire behavior:** Expect active fire behavior with westerly slope, valley, and ridge top winds. Fire behavior may include surface fire runs, limited torching on steep wind facing slopes, with downwind spotting to 1/4 mile. Rapid spread on slopes, active flanks, and sustained backing is likely with wind/slope alignment. Rollout and falling snags on steep slopes may accelerate backing and produce flare-ups. Slope reversals may result in upslope runs with torching. Monitor wind speed/direction throughout the operational period. Heavy moss may contribute to spotting and torching, Gorse may exhibit high intensity fire effects. Undetected spot fires may become active with increased drainage winds. Snags will be falling more frequently with length of time burning.

\* Fine fuel moisture= 7% (exposed). Probability of Ignition 40%-50% (exposed). Group torching spotting to 0.25 mile.

Fuel Type/Model	Rate of Spread	Flame Length	Spot size in 1-hour (Acres)
If your work area looks like -	Ch/hr = FPM		
Timber Litter (TL9) Fluffy/leafy	8 -10 ch/hr.	4 - 5 feet	2 - 3
Timber w/ Shrub Understory (TU5)	7 - 9 ch/hr.	6 - 7 feet	2 - 3
Timber Litter – conifer needles (TL5)	4 - 5 ch/hr.	1 -2 feet	.5 - 1

#### **Specific Assignments:**

**FLAT** – Monitor smoke location and characteristics. Evaluate weather, including wind speed and direction. Moderate reburn potential with many areas containing unburned pockets, fire killed shrubs, and ragged edge burn pattern.

**ANVIL** - Westerly winds may produce up valley and upslope flow in creeks and river locations. Expect multiple areas of fire activity including upslope surface fire spread, with active flanks. Expect fingering fire spread on steep slopes, with torching. Sustained backing and rolling materials may cause flare-ups. **Undetected spot fires may become active with wind.** Several areas of likely slope reversal may cause rapid upslope spread when backing across creeks. Burning snags may contribute to spotting, and rollout.

**Air Operations:** Westerly wind may affect approach/departure from bucket drops. Expect smoky conditions on east side of fire.

### Safety

Subtle changes in the weather pattern today .....**Watchout Situation #15 – Wind increases and/or changes direction. #4 – Unfamiliar with weather and local factors influencing fire behavior.**

Our fire will be getting larger for the next couple burn periods, larger fires release more energy; more energy released makes larger fires – this fire will get larger. Large fires get large slowly or quickly (take home message – observe fire behavior to determine your actions).

### DO-IT-YOURSELF SAFETY MESSAGE

Please take some time today to have a tailgate safety session with your crew and discuss the following questions.

- *The most likely way that someone on my crew (or me) gets injured or has an accident today is \_\_\_\_\_*
- *I/We will prevent this accident by doing the following:*  
\_\_\_\_\_

*Despite your best prevention efforts, there has been an injury and you need to get them to treatment. Discuss the answers to the following questions before undertaking your assignment for the day:*

- *Have you familiarized yourself ahead of time with the Medical Plan's emergency procedures and the Medical Incident Report? YES/NO*
- *How long will it take to get the closest Medical Personnel and Advanced Life Support Equipment to the patient's location?*  
\_\_\_\_\_
- *How long will it take to stabilize the patient for transport? \_\_\_\_\_*
- *How long will it take you to transport the patient to a helispot or drop point? \_\_\_\_\_*
- *What is your backup plan for extraction if you can't fly, short haul, or hoist them out? (Smoke, weather, etc.) \_\_\_\_\_*
- *How many people will it take to carry them? \_\_\_\_\_*
- *How long will it take overall for them to arrive at a hospital? \_\_\_\_\_*

### Questions?

*We talk about safety A LOT;  
why do we still have accidents  
and injuries?  
Can you pass on some  
personal lessons learned from  
past medivacs?  
What do you think managers  
can do differently to prevent  
accidents?  
We want you to have a safe  
assignment!*

## RESOURCE ADVISOR SPECIAL INSTRUCTIONS FOR OPERATIONAL RESOURCES

HELP PREVENT SPREAD OF GORSE PLEASE!!

Weed wash when:

- Checking into the incident as well as checking out.
- Going into and leaving the Anvil Fire area to keep gorse and scotch broom off public, tribal, and private lands.
- There are currently 3 weed washes: Anvil Camp, at the intersection of Cape Blanco Rd. and Hwy 101, and up the Elk River Road just east of DP 732.

**Gorse is a very thorny shrub that was introduced from Europe in the late 1800's. It has since become the #1 most invasive species on the southern Oregon coast, taking over forest and farmlands and playing a key role in more rapid spread of wildfire. Seeds remain viable in the soil for 80 years or more, making prevention key. PLEASE DO YOUR PART AND WEED WASH DAILY!**

**FISH SCREENS:** On all foot valves on pumps and tenders on Sixes, Illinois, Rogue, Lawson Creek, Hunter Creek, Elk River, Panther Creek, Butler Bar and any other fish-bearing streams. These are in addition to screens on pump hoses, and READs can/will deliver!

**PREVENT PORT-ORFORD-CEDAR ROOT DISEASE:** At draft sites use bleach for water sources identified by resource advisors unless advised otherwise. Mix one gallon of bleach per 1,000 gallons of water in the engine or water tender. **DO NOT** dump leftover bleach on ground or near water bodies as it is lethal to aquatic life.

**BLEACH REQUIRED AT DRAFT SITES:**

- East of DP640 on the Sixes River
- East of confluence of State Creek (Red Rock) on the Elk River

**LOOK FOR FLAGGING:** Orange and black polka dot and yellow flagging mark resource areas to protect. Do not disturb.

-THANK YOU FOR BEING STEWARDS OF THE LAND!

## Incident Replacement Guidelines

Prior to release from the incident, personnel may request replacement of standard equipment and supplies (NFES) that were damaged, lost, consumed, or worn out during the incident. Personnel must document the request on the most applicable form – Incident Replacement Requisition (OF-315), Saw Parts Order, or General Message (OF-213). This request should include a description of the use on the incident and/or why the item(s) need to be replaced. Requests must be signed by the **Division Supervisor** then approved by the **Operations Section Chief** prior to taking to Supply. Worn out or damaged property **will be turned into the Supply Unit**.

Approval for replacement of non-standard items (**Non NFES**) may need to be approved by the Incident Business Advisor (INBA). You should initiate this process at least two days prior to demob.

Personnel who need to replace/repair damaged property will document the request on an OF-289, Property Loss or Damage Report. This form requires Incident Supervisor recommendation as well as Subject Matter Expert determination, if appropriate. The form will then need to be turned into the Comp/Claims Unit Leader, who will track the claim and facilitate approval by the Finance Section Chief (FSC). Additional documentation may be required by the FSC. The FSC will decide, or recommend to the INBA, as to whether the items can be replaced or repaired with incident funds. After approval, Supply/Ordering will issue S numbers.

Items originally provided through use of preparedness funds which need to be replaced due to **normal wear and tear** (e.g. worn out tire tread, worn out chain saw bar, 5-yr old GPS that stops working, etc.) should be accomplished using home unit funds, not incident funds. If government property was damaged on the incident due to a specific event, (e.g. wind event destroys a tent) the incident could, upon receipt of required documentation and proof of damage, authorize replacement. **Replacement of non standard items that are worn out is the responsibility of the home unit.**

The OF-289, Property Loss or Damage Report is available at the Finance yurt or on the linktr.ee by accessing the QR code.

Please feel free to visit Finance, Logistics, or Operations if you have any questions.
