Fire Behavior Forecast #89

Name of Incident: Flat / Anvil Fire	Administrative Unit: OR-RSF
Date & Time Issued: October 12, 2023 @ 1900	Operational Period: October 13, 2023
FBAN: Steve Ziel	Signed: /Z/

Assumptions: *Yesterday's modest "warming and drying" was not sufficient to effect fire behavior. Today's clouds and rain will keep fire activity minimal due to additional moisture. Fire spread is unlikely with moist/wet fuels. The effect of previous cycles of moisture will linger across the fire area. Heavy sheltered fuels will continue to smolder and serve as future heat sources until they are consumed, or more rain occurs. The Anvil and Flat fires continue to retain scattered heat sources resulting from previous drought conditions, and a full summer of drying.*

Weather Summary

See attached Fire Weather Forecast

Fire Behavior Summary

Fuels in the fire area include very high load fluffy *Timber Litter (TL9)*, closed canopy *Timber Litter (TL5)* with needles, branches/heavy fuel concentrations, and large *Timber with Understory (TU5)* shrubby open timber canopy. Primary tree species include mixed sizes of Douglas Fir/mixed conifer timber stands. Shrub fields and understory species include Oregon Myrtlewood, maple(s), manzanita, other shrub-form hardwoods. **Large snags and heavy fuel concentrations (often shrub covered) are common throughout all areas.** Live fuels (shrubs) are seasonally dry and may contribute to fire spread. Moss is common in timber stands as a ladder/spotting fuel. Gorse (highly flammable shrub) is common in timber harvest areas, especially on west side of fire area.

Today's potential fire behavior: *Cloudy skies and rain will result in wet/moist surface fuels. Today's fire behavior will include isolated/scattered pockets of smoldering in heavy fuels. Gorse may burn with wind even when damp. Snags continue to fall due to length of time burning and increased wind. Heavy fuels (logs, stumps) will retain long-term heat due to a whole summer of drying. Primary fire behavior characteristic for today is "Smoldering".*

* Fine fuel moisture= 20% + (exposed). Probability of Ignition 0%-5%. Group torch spotting to <.00 mile.

Fuel Type/Model	Rate of Spread	Flame Length	Ridge Top Gusts to 15 mph	
If your work area looks like -	Ch/hr = FPM		Ch/hr	FL
Timber Litter (TL9) Fluffy/leafy	<1 ch/hr.	< 1 foot	< 1	< 1
Timber w/ Shrub Understory (TU5)	<1 ch/hr.	< 1 foot	< 1	< 1
Timber Litter – conifer needles (TL5)	<1 ch/hr.	< 1 foot	< 1	< 1

Specific Assignments:

FLAT – Monitor smoke location and characteristics. Evaluate weather, including ridge top winds and rainfall. Low reburn potential due to area wide rain on fuels containing unburned pockets, fire killed shrubs, and ragged edge burn pattern.

ANVIL – Monitor smoke location and characteristics. Expect scattered areas of minimal fire behavior (smoldering) in heavy fuels. Snags are top-heavy with moisture, and the ground is wet, watch for rolling materials.

Air Operations: Mostly cloudy sky with likely mountain obscuration. Gusty winds at ridge top..

Safety

Changing conditions may require re-evaluation of your planned actions. If the conditions are changing ask: how fast, how much, when, where? Consider the effects of change on your planned actions that may require adjusting to mitigate or accommodate changing conditions. Consider the consequence of change. Will your situation get better or worse? Will it get worse before it gets better?

SAFETY MESSAGE

13 October 2023

INCIDENT: Flat / Anvil Fire

OPERATIONAL PERIOD: 0700-1900

TOPICS:

MISSION CREEP

Mission Creep is the expansion of a mission or task beyond original objectives or assignment. In our business this is most often undesirable unless serious life considerations are at risk. Many times, Mission Creep will continue once started until catastrophic failure or undesirable outcomes are encountered. Plans are built based on set and measurable objectives. Stay in your lane and avoid the urge to creep!

TRANSPORTATION/DRIVING

Allow extra travel time commuting from Gold Beach to ICP. Identify equipment for clearing blocked roads due to weather impacts. Avoid washouts and low-lying areas during periods of rainfall. Evaluate travel routes daily for weather impacts and have secondary access/egress routes.

SLIP, TRIP, FALL, SLIDE

Think about where you walk and when and how fast, or in our case how slow you walk. Don't be this guy by having a slip, trip, fall or slide down a wet slippery slope.

DO YOUR BEST TO KEEP YOU AND YOUR PG DRY. VISQUEEN IS AVAILABLE AT LOGISTICS.

SAFETY OFFICERS: Jack Cates, Troy Corn, Mitch Wilson, Taija Corso

Deliberate Risk Assessment-Hazard Summary

13 OCT 2023

Hazard	Mitigation	Post Risk
Extraction/Aircraft	Identify medivac sites and helispots. Initiate ground transport to accident site for transport capability. Identify EMT/EMTP from resources assigned to division. Provide line-qualified paramedics to each division as available. Review IWI protocol to ensure familiarity. Consider Short Haul if conditions dictate. Utilize agency, national guard and civilian medivac as treatment/timing dictates. Evaluate ongoing need for repositioning medical personnel.	HIGH
Hazard Trees	Use avoidance to limit exposure time. Fall ahead to avoid exposure. Use qualified fallers or alternate methods if needed. Conduct on-going risk analysis of all work areas. Follow Hazard Tree Safety Guidelines (IRPG page 20-21).	HIGH
Heavy Equipment	Post lookouts and road guards around equipment work areas. Establish communications with equipment boss and operator. Do not work down-slope from equipment. Follow agency guidelines for chipping operations.	HIGH
Human/Environmental Factors	Engage as weather conditions permit. Provide visqueen for rainfall protection. Maintain an awareness of wildlife and poison oak. Provide warming, drying and laundry areas at ICP for crews and personal equipment. Maintain proper footing on slopes and awareness of rolling material.	MODERATE
Transportation	Improve lighting at HWY101 and Cape Blanco Rd intersection. Allow extra travel time commuting from Gold Beach to ICP. Identify equipment for clearing blocked roads due to weather impacts. Avoid washouts and low-lying areas during periods of rainfall. Evaluate travel routes daily for weather impacts and have secondary access/egress routes. Sign all incident travel routes. Provide daily updated travel plan maps. Practice defensive driving. Obey all speed limits on all roads and in school zones.	MODERATE
Public Interaction	Implement area and road closures as necessary. Maintain awareness of evacuation areas and provide accurate information dissemination. Maintain awareness of hunters within and adjacent to the perimeter.	LOW
Communication	Evaluate dead zones prior to engagement. Utilize human repeaters as needed. Ensure accountability of resources in problem areas. Spiking resources must have communication coverage.	LOW
Viral Transmission Mitigations, Communicable Disease	Maintain awareness of health and perform self-checks. Report and isolate if not feeling well. Use remote briefings and logistical layouts that provide for social-distancing as necessary. Establish liaison with Curry County Public Health.	LOW

SUPPRESSION REPAIR QUICK GUIDE – ANVIL FIRE
Full Repair Plan is Available at the READ Tent
Contact: Jeremy Gooding – L-READ(T). Ph: (808) 281-4781

Suppression repair is intended to mitigate or eliminate resource impacts caused by fire suppression activities and to restore the area to its natural appearance.

Weed Wash:

- Use Weed Wash Stations and do not transport contaminated material from one part of the fire to another. Also required on Demob.
- Weed wash is most important coming **out** of contaminated areas and **before** moving into clean areas.
- **Prevention** is the most powerful tool we have for managing invasive species like Gorse.

Repairing Line

- Pull berms back into the line, uniformly distributing soil and organic material to re-establish natural contours.
- Place or scatter available slash, trees, limbs, and tops to obliterate and blend the line while also providing cover for erosion mitigation.
- Attempt to blend slash into surrounding landscape as much as possible.
- Block access by unauthorized motor vehicles at potential entry points using woody material, boulders, or any locally available material.
- Provide drainage where needed with water bars to standard specifications.
- Chipped material piles need to be less than 4 inches in depth.
- On dozer line, install water bars on slopes greater than 45 percent. See Repair Plan for specifications.

Sensitive Areas:

- Repair within sensitive areas that were impacted during suppression actions require on-site REAF/ARCH. Check Field Maps for “monitor required”.
- Look for flagging: Orange and black polka dot and yellow flagging marks resource areas to protect. Do not disturb.

Ditches, Culverts, and Drainages:

- Return features to proper functional state.
- Clean inlets and outlets
- Establish drain dips.
- Restore new outer berms to pre-fire condition.
- Make sure ditches are clean and functioning.

See Anvil Suppression Repair Plan for specs on:

- Staging Areas/Drop Points
- Road repair and Road Used as Line
- Helispots
- Fences

Thank you for protecting our resources.

Patience & Humor While Mud Bogging

Welcome to the Pacific northwest where rain is plentiful, the sun shines occasionally, and getting stuck in the mud is just part of our daily routine.

Here at the Anvil ICP, we are proud to provide you with an “extreme” outdoor mudding opportunity. We offer slipping, sliding, sinking, and wading free to all who are interested in walking to a porta potty, kitchen, laundry, parking lot, or just about anywhere else in camp.

We offer free mud facials to all who are interested as we have additional supplies of mud on hand, if necessary. Facials are free spa services, and no appointments are necessary, plus showers are available at no extra cost.

All kidding aside...As you go about your daily routine, please practice patience with yourself and with others as you traverse the vast mud bogs. We are working with the universe, (via our IMET) discussing with them weather changes however, other priorities have arisen, and they felt a little more precipitation would benefit us all in the coming days.

With that, we hope you find a little humor in your day and enjoy this once in a lifetime opportunity to do some extreme mud bogging, free of charge right here in the Pacific northwest. We understand the difficulties and we are working to improve our situation. Take care and try to find some humor in your day!

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		<i>Brief Summary of Injury or Illness (Ex: Unconscious, Struck by Falling Tree)</i>

Treatment:

4. TRANSPORT PLAN:

Evacuation Location (if different): (Descriptive Location (drop point, intersection, etc.) or Lat. / Long.) Patient's ETA to Evacuation Location:
