Fire Behavior Forecast #90

Name of Incident: Anvil and FLAT	Administrative Unit: OR-RSF
Date & Time Issued: October 13, 2023 @ 1900	Operational Period: October 14, 2023
FBAN: Steve Ziel	Signed: /Z/

Assumptions: *Today's clouds and rain will continue to produce minimal activity. Fire spread is unlikely due to moist/wet fuels. The effect of previous cycles of moisture will linger across the fire area. Heavy sheltered fuels will continue to smolder and serve as future heat sources fully consumed, or more rain occurs. The Anvil and Flat fires continue to retain scattered heat sources resulting from previous drought conditions, and a full summer of drying.*

Weather Summary

See attached Fire Weather Forecast

Fire Behavior Summary

Fuels in the fire area include very high load fluffy *Timber Litter (TL9)*, closed canopy *Timber Litter (TL5)* with needles, branches/heavy fuel concentrations, and large *Timber with Understory (TU5)* shrubby open timber canopy. Primary tree species include mixed sizes of Douglas Fir/mixed conifer timber stands. Shrub fields and understory species include Oregon Myrtlewood, maple(s), manzanita, other shrub-form hardwoods. **Large snags and heavy fuel concentrations (often shrub covered) are common throughout all areas.** Live fuels (shrubs) are seasonally dry and may contribute to fire spread. **Moss** is common in timber stands as a ladder/spotting fuel. **Gorse (highly flammable shrub)** is common in timber harvest areas, especially on west side of fire area.

Today's potential fire behavior: *Cloudy skies and rain will continue to result in wet/moist surface fuels. Today's fire behavior will include isolated/scattered pockets of smoldering in heavy fuels. Gorse may burn with wind even when damp. Snags continue to fall due to length of time burning and increased wind. Heavy fuels (logs, stumps) will retain long-term heat due to a whole summer of drying. Primary fire behavior characteristic for today is "Smoldering".*

* Fine fuel moisture= 20% + (exposed). Probability of Ignition 0%-5%. Group torch spotting to <.00 mile.

Fuel Type/Model	Rate of Spread	Flame Length	Ridge Top Gusts to 15 mph	
If your work area looks like -	Ch/hr = FPM		Ch/hr	FL
Timber Litter (TL9) Fluffy/leafy	<1 ch/hr.	< 1 feet	< 1	< 1
Timber w/ Shrub Understory (TU5)	<1 ch/hr.	< 1 feet	< 1	< 1
Timber Litter – conifer needles (TL5)	<1 ch/hr.	< 1 feet	< 1	< 1

Specific Assignments:

FLAT – Monitor smoke location and characteristics. Evaluate weather, including ridge top winds and rainfall. Low reburn potential due to area wide rain on fuels containing unburned pockets, fire killed shrubs, and ragged edge burn pattern.

ANVIL – Monitor smoke location and characteristics. Expect scattered areas of minimal fire behavior (smoldering) in heavy fuels. Snags are top-heavy with moisture, and the ground is wet, watch for rolling materials.

Air Operations: Mostly cloudy sky with periodic mountain obscuration.

Safety

Accurate situational awareness (SA) requires constant reassessment of conditions (existing or potential) that may impact the safety and effectiveness of tactics. Monitoring for the 18 Watchout Situations and establishing operational / environmental limits ("trigger points") ahead of time can help to focus SA, prompt reassessment, and help you re-evaluate the risk of current actions.

SAFETY MESSAGE & DELIBERATE RISK ASSESSMENT-HAZARD SUMMARY

<p>14 October 2023 SAFETY MESSAGE</p>	<p>EMPHASIS TOPIC: The weather roller-coaster continues. More showers today, followed by a brief break, then one more wet and windy day Monday with up to 1” of rain. Beyond Monday the weather looks good for getting some good work done. Stay dry this weekend and keep yourself and equipment ready. Resiliency is the key.</p>	
Hazard	Mitigation	Post Risk
Extraction/Aircraft	Identify medivac sites and helispots. Initiate ground transport to accident site for transport capability. Identify EMT/EMTP from resources assigned to division. Provide line-qualified paramedics to each division as available. Review IWI protocol to ensure familiarity. Consider Short Haul if conditions dictate. Utilize agency, national guard and civilian medivac as treatment/timing dictates. Evaluate ongoing need for repositioning medical personnel.	HIGH
Hazard Trees	Use avoidance to limit exposure time. Fall ahead to avoid exposure. Use qualified fallers or alternate methods if needed. Conduct on-going risk analysis of all work areas. Follow Hazard Tree Safety Guidelines (IRPG page 20-21).	HIGH
Heavy Equipment	Post lookouts and road guards around equipment work areas. Establish communications with equipment boss and operator. Do not work down-slope from equipment. Follow agency guidelines for chipping operations.	HIGH
Human/Environmental Factors	Engage as weather conditions permit. Provide visqueen for rainfall protection. Maintain an awareness of wildlife and poison oak. Provide warming, drying and laundry areas at ICP for crews and personal equipment. Maintain proper footing on slopes and awareness of rolling material.	MODERATE
Transportation	Improve lighting at HWY101 and Cape Blanco Rd intersection. Allow extra travel time commuting from Gold Beach to ICP. Identify equipment for clearing blocked roads due to weather impacts. Avoid washouts and low-lying areas during periods of rainfall. Evaluate travel routes daily for weather impacts and have secondary access/egress routes. Sign all incident travel routes. Provide daily updated travel plan maps. Practice defensive driving. Obey all speed limits on all roads and in school zones.	MODERATE
Public Interaction	Implement area and road closures as necessary. Maintain awareness of evacuation areas and provide accurate information dissemination. Maintain awareness of hunters within and adjacent to the perimeter.	LOW
Communication	Evaluate dead zones prior to engagement. Utilize human repeaters as needed. Ensure accountability of resources in problem areas. Spiking resources must have communication coverage.	LOW
Viral Transmission Mitigations, Communicable Disease	Maintain awareness of health and perform self-checks. Report and isolate if not feeling well. Use remote briefings and logistical layouts that provide for social-distancing as necessary. Establish liaison with Curry County Public Health.	LOW

SUPPRESSION REPAIR QUICK GUIDE – ANVIL FIRE
Full Repair Plan is Available at the READ Tent
Contact: Jeremy Gooding – L-READ(T). Ph: (808) 281-4781

Suppression repair is intended to mitigate or eliminate resource impacts caused by fire suppression activities and to restore the area to its natural appearance.

Weed Wash:

- Use Weed Wash Stations and do not transport contaminated material from one part of the fire to another. Also required on Demob.
- Weed wash is most important coming **out** of contaminated areas and **before** moving into clean areas.
- **Prevention** is the most powerful tool we have for managing invasive species like Gorse.

Repairing Line

- Pull berms back into the line, uniformly distributing soil and organic material to re-establish natural contours.
- Place or scatter available slash, trees, limbs, and tops to obliterate and blend the line while also providing cover for erosion mitigation.
- Attempt to blend slash into surrounding landscape as much as possible.
- Block access by unauthorized motor vehicles at potential entry points using woody material, boulders, or any locally available material.
- Provide drainage where needed with water bars to standard specifications.
- Chipped material piles need to be less than 4 inches in depth.
- On dozer line, install water bars on slopes greater than 45 percent. See Repair Plan for specifications.

Sensitive Areas:

- Repair within sensitive areas that were impacted during suppression actions require on-site REAF/ARCH. Check Field Maps for “monitor required”.
- Look for flagging: Orange and black polka dot and yellow flagging marks resource areas to protect. Do not disturb.

Ditches, Culverts, and Drainages:

- Return features to proper functional state.
- Clean inlets and outlets
- Establish drain dips.
- Restore new outer berms to pre-fire condition.
- Make sure ditches are clean and functioning.

See Anvil Suppression Repair Plan for specs on:

- Staging Areas/Drop Points
- Road repair and Road Used as Line
- Helispots
- Fences

Thank you for protecting our resources.

KINDNESS

“Unexpected kindness is the most powerful, least costly, and most underrated agent of human change.” Bob Kerrey

Kindness is the quality of being friendly, generous, and considerate, and it has the power to boost our mental well-being and improve our mood, lower our blood pressure, and strengthen our relationships.

Kindness is a universal language that can bring people together regardless of age, race, ethnicity, religion, status, and identity.

Mark Cuban says, “one of the most underrated skills in business is being nice. We can always take a moment to be nice, to be gracious, and kind, for no other reason than because we can, because the impact might make a difference that lasts a lifetime.”

We extend that kindness to you in the form of appreciation for your being here, working hard, paying attention to detail, helping others, and for contributing to a positive work environment. We also want to recognize and thank our Logistics folks for all their hard work in improving our ingress and egress here at the ICP.

Everyone assigned to this incident, whether you are working inside a yurt or working outside in the rain and wind deserves a pat on the back! You are doing an amazing job and you are appreciated! Keep up the good work!
