<b>Comments / notes on tonight's mission and this interpretation:</b> <b>Bedrock Fire</b> No change to perimeter since last mapping. Has some areas of relatively more intense heat around Clark Butte and in the drainage of North Fork Fall Creek. The interior has scattered heat throughout many areas, particularly the south side of Little Fall Creek in the west and in the Pernot Creek drainage in the east. Some isolated heat points were mapped where the scattered heat was not observed. <b>Christy Fire</b> No change to perimeter since last mapping. Isolated heat point detected and mapped for the first time since 9/4 For acreage calculations, Area (geodesic), NAD83 Zone 10, and US Survey Acres
