<b>Comments / notes on tonight's mission and this interpretation:</b>  <p><i>NOTE: this log is intended for internal incident communication only. Any unauthorized dissemination of this information or associated IR data without expressed consent of the incident management team is prohibited.</i></p> <p>Tonight's mapping used the previous night's IR heat perimeter as a base for interpretation. Perimeter growth was mapped along the fire's western, southern and eastern edge with small areas of intense heat mapped in these areas of expansion. Last night's isolated heat northwest of the fire showed no heat tonight.</p> <p>One spot fire was mapped 1/10 mile east of the fire's main perimeter on the north side of the cedar creek drainage. Much of the fire's area displayed scattered heat.</p>
