FINANCE MESSAGE

Fire Name: Chilcoot

Fire Number: US-OR-NWC-000345

Accounting Code: P6 QLF5 (0615)

Email: 2023.chilcoot.finance@firenet.gov

Finance Documents Needed upon "Check In":

Please email these documents or scan the QR Code below, attach & submit.								
FED Equipment/ Crews:	Overhead:	Contract Equipment/	Cooperator:					
 Manifest - showing employment type (GS or WG) or AD rates if applicable Resource Order 	 AD/Casual Hire Form Resource Order If regular Agency please ensure "GS" or "WG" is written on your CTR 	 Contract Crews: Agreement Manifest Resource Order Inspections 	 Cooperative Agreement Resource Order 					

When emailing finance:

- <u>Overhead/FED</u>: *subject line*: TIME, Resource #, Resource Name
- Equipment/Cooperator: *subject line*: EQTR, Resource #, Resource Name
- <u>Comp/Claim:</u> *subject line:* Comp or Claim, Resource #, Resource Name

Prior to your demob date, please contact Finance *via email* to expedite the demob process. Upon submittal of your final CTR/Shift Tickets, Finance will email you copies of your pay documents for review and signature.

Health & Safety Message

Incident:	Chilcoot / Ridge Fire	Date/Op Period:	Day Shift
	OR-UPF-000345	N	Ionday 8/28/23

<u>Hazards & Risks</u>

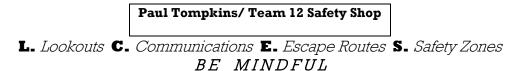

<u>**Transfer of Command:</u>** As we make the transfer of command from extended attack to CA Team 12; maintain your situational awareness as new faces take over the fire. Share information and local fire knowledge. Review your IAP closely and share all the intel you've gathered over the last several shifts with the new folks. Identify all the hazards and mitigation measures and reevaluate your tactics each shift to reflect the changing conditions on the fire line.</u>

<u>Smoke Exposure</u>: Heavy, dense smoke can lead to respiratory problems and mental impairment due to exposure to carbon monoxide and particulate matter. If possible, avoid long periods of smoke exposure. Make an effort to rotate personnel out of it and into fresh air. Refer to the IRPG for further mitigation measures. Some signs and symptoms of Carbon Monoxide (CO) exposure:

- Higher concentrations are in closer proximity to the combustion source
- Moderate exposure can lead to shortness of breath and headaches
- High levels of CO can lead to headaches, confusion, and a person collapsing from exertion

<u>Snag Hazards, Steep Terrain, Rolling Materials & Mines:</u> The fire area has a large number of standing dead snags, especially within old burn scars, along within heavy dead and downed fuels. The terrain is steep and rocky in some areas. Be aware of rolling rocks and logs, watch your footing and spacing between personnel. An old mining district is located in the area north of the Bohemia fire (Road 2473) with possible hazmat sites. Scout out your work areas and identify all the hazards and make them known.

Driving Safety: Long drive times, narrow/winding roads, civilian traffic, reduced visibility, distracted drivers; all combine to make it a challenge just to get to the fire line safely! Slow down, focus on the road, pull off the road to check maps, phones, radios, etc. Special Note: School is back in session today. Watch for busses and children at bus stops.

Pacific Northwest Wildfire Coordinating Group -HAZARD TREE ALERT-

On August 18, 2022, while working on the Rum Creek Fire in Oregon, Logan Taylor was killed by a falling tree. The Serious Accident Investigation Team (SAIT) assigned to this accident asked that a Safety Alert be issued to increase situational awareness on the specific type of hazard tree involved in the Rum Creek fatality.

Based on information reviewed so far, the SAIT has confirmed that no actions were being taken on the tree that fell, and it appeared to be a green and live Douglas fir approximately 160 feet tall and 39 inches in diameter near the base of the tree. The tree fell from within the fire perimeter and struck the firefighter who was standing outside of the fire perimeter.

documented two indicators of potential weakness at the base and within the first 20 feet of the tree, and the tree appeared to break from the base. Specifically, an extensive fire scar/catface on an adjacent (facing) tree had conks (fungus) within the first 20 feet of the trunk. The kinds of fire scars visible on surrounding trees illustrate that additional large trees had similar potential of falling even with relatively low or moderate fire behavior. These conditions likely exist with other trees within the fire area.

The site was affected by fire following the incident. However, the SAIT

Fire-damaged trees (tree pictured was not involved in Rum Creek incident) have failure potentials that depend on the amount of sound wood remaining. Photo credit Rum SAIT.

Important Reminders:

relatively low or moderate fire behavior. These conditions likely exist with other trees within the fire area. Indicators of green tree hazards may not be visible from all vantage points, unlike dead trees or "snags". Because the Rum Creek fire continues to be active and crews continue to work in the area, the SAIT wanted to increase situational awareness immediately to firefighters by providing factual information prior to

awareness immediately to firefighters by providing factual information prior to release of the final report.

- The potential for tree failure increases dramatically with the combined effects of multiple defects. In the case of multiple indicators, one condition (indicator) often worsens another; they interact synergistically.
- Fungi and fruiting bodies (conks) found on trees may indicate massive interior rot. Excessive resinosis (resin flow) also indicates heart or root diseases.
- Border areas Be aware and alert in border areas where fuel types change from grass to tree line or one stand age class to another. Clear-cuts and burn scars are other notable examples. These areas can make taller trees susceptible to higher wind exposure and potential damage or widow makers.
- Fire Scars In the era of 'Mega-Fires', fire footprints are larger than ever, and salvage is not always an option. This can mean large areas of high snag ratios but also numerous fire-weakened trees that appear green in contrast to all the snags surrounding them. ANY tree in a previous fire scar should be considered possibly hazardous due to the stress that high severity fire can subject them to – opening the way for infections or other diseases to enter scar and weaken the tree.

Typical conk of red ring rot Phellinus pini often indicates low-failure potential. Photo credit Field Guide for Hazard-Tree Identification.

Remember, tree strikes to firefighters occur every year—there were 17 in 2021 alone. The majority did not have a chainsaw or felling component. The Wildland Fire Lessons Learned center has 148 search results tagged with #HitByTree, and tree strike fatalities are one of the leading causes of wildland firefighter line of duty death.

WE NEED YOUR PHOTOS AND VIDEO

Please submit photos and/or video of the amazing work you are doing on the Chilcoot Fire. The public greatly appreciates what you are doing to protect their community and enjoy seeing what you are doing out there. We will post to Facebook, Twitter and InciWeb. Please send to the Public Information Officers: 2023.Chilcoot.@firenet.gov

LOST & FOUND

If you lost something or found something please stop by the PIO trailer. We will help find the owner of found items or let us know what you lost.

MAIL SERVICE

If you have stamped mail that needs to be sent out drop it off at the Information trailer or with one of our PIO's Chilcoot Fire Camp (Your Name and E or O Number) 373 French Creek Rd Glide, OR 97443

PROTECTION OF CULTURAL RESOURCES

Personnel may encounter cultural resources in the form of a cabin, a trail shelter, an artifact, a rock or wood feature that seems "out of place" or not natural, or any object that looks interesting please leave it in place. Document any findings with a LAT/LONG and photograph and bump it up the chain of command and get ahold of a resource advisor on the radio to come and take a look.

Artifacts and cultural sites are protected under federal law and illegal to collect from public lands. The State of Oregon has separate laws defining protection and preservation of cultural sites on private lands. Your cooperation and assistance in preserving cultural artifacts historic resources and cultural landscape are very much appreciated by local agencies, land owners and our Tribal partners. Thank you and be safe!
