Comments /notes on tonight's mission and this interpretation: <p><i>NOTE: This log is intended for internal incident communication only. Any unauthorized dissemination of this information or associated IR data without expressed consent of the incident management team is prohibited.</i></p> <ul style="list-style-type: none"> • Started the interpretation from the NIFS Event Poly of 9/9/2023 @ 2307 PDT for both Chilcoot and Ridge Incidents (1,767 and 219, respectively). <p>Chilcoot</p> <ul style="list-style-type: none"> • No changes to perimeter boundary. The 2-acre difference likely due to which script was ran to calculate acres between incident and interpreter. • One small patch of intense heat along the perimeter. It is located on the south flank on the north side of canyon of Hipower Creek. • Patches of scattered heat still exist, but have continued to shrink over the past few days. • Increased number of isolated heat sources due to the shifting from scattered heat to isolated heat. <p>Ridge</p> <ul style="list-style-type: none"> • No change or increase in perimeter acres. • No intense or scattered heat mapped. • There is one isolated heat source just outside the perimeter in the northeast corner of the fire. • Isolated heat source concentrated in interior area of the fire.
