Comments /notes on tonight's mission and this interpretation: <p><i>NOTE: This log is intended for internal incident communication only. Any unauthorized dissemination of this information or associated IR data without expressed consent of the incident management team is prohibited.</i></p> <ul style="list-style-type: none"> • Started the interpretation from the NIFS Event Poly of 9/13/2023 @ 1805 PDT for both Chilcoot and Ridge Incidents (1,773 and 214, respectively). <p>Chilcoot</p> <ul style="list-style-type: none"> • No perimeter growth. • Two patches of intense heat. The larger one is where it has been for the past few days, nearly center of south flank. Second patch is very small located on east side of the section that crosses Hipower Canyon. • Small patches of scattered heat on west half of the burn area. • Isolated heat scattered through most of the burn area. It is less on the western half. <p>Ridge</p> <ul style="list-style-type: none"> • No perimeter growth • No intense heat • Two small patches of scattered heat in the upper west side. • Limited number of isolated heat sources. All are interior.
