3. Objective(s):		
<p>Control Objectives:</p> <ul style="list-style-type: none"> • Identify, evaluate and reduce risks to firefighters and the public through the use of Deliberate Risk Assessment process. • Minimize acres burned and impacts to communities and infrastructure by utilizing the Incident Strategic Alignment Process (ISAP) to guide operations in the development of strategies and tactics to be implemented by resources on the Umpqua Fires. • Implement strategic actions that have the highest probability of success to mitigate adverse impacts to values at risk, including: <ul style="list-style-type: none"> • Highway 138 corridor • Bohemia Mining District • Fairview Communication site • Chilcoot Repeater • Private industrial and non-industrial timber land • Infrastructure & Recreation • Protection of habitat for Threatened and Endangered Species <p>Management Objectives:</p> <ul style="list-style-type: none"> • Treat each other with dignity and respect and act in a professional manner while on the fire and in the community. • Work closely with Agency Administrators and lead Resource Advisor to plan and implement actions that protect sensitive natural and cultural resources at risk from suppression actions. • Maintain and enhance relationships with cooperators, stakeholders, landowners, and communities by providing accurate and timely information. • Manage cost commensurate with values at risk and maintain fiscal accountability. 		
4. Operational Period Command Emphasis:		
Implement strategies and tactics to achieve incident objectives with the least amount of risk practical and the highest probability of success. Our fires have the potential to escape existing control lines, ensure that mop-up standards are being met and adequate patrols are occurring. Ensure initial attack support readiness to support the local area with any additional fires.		
General Situational Awareness:		
Pay attention to dryer weather and increased fire activity. Refer to your assigned division's 204 and review the Task/Purpose/End State to ensure work assignments are aligned with leaders intent.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 8	TYPE OF FIRE: Wildfire
FIRE NAME: Umpqua Fires	OPERATIONAL PERIOD: 0700-1900 September 7, 2023
DATE ISSUED: September 6, 2023	TIME ISSUED: 20:00 Hours
UNIT: Umpqua National Forest	SIGNED: Don Strand – FBAN

INPUTS

WEATHER SUMMARY: See Fire Weather Forecast for Details

FUELS:

Fuels in the fire area are primarily composed of *Timber Litter*, and *Timber Understory with moss/lichen present in most stands*. Mature conifer stands with western hemlock and Douglas fir present, generally have heavy surface fuel loading. 30 to 50+ year old second growth conifer stands contain needle litter and some down woody debris. Brush and reproduction present in areas with less dense canopies.

BRANCH I: Forecast for today-ERC 64th percentile. Yesterday's obs. 1hr-11%, 10hr-17%, 100hr-20%, 1000hr-20%

BRANCH II: Forecast for today-ERC 71st percentile Yesterday's obs. 1hr-12%, 10hr-18%, 100hr-19%, 1000hr-20%

OUTPUTS

FIRE BEHAVIOR GENERAL: Minimal fire behavior is expected with little to no perimeter growth. Continued smoldering in duff, larger down logs, and forest debris. In the afternoon when the RH minimum is reached, a slight uptick in fire behavior is likely in available fuels on southern aspects. Moss and lichens may be a factor in areas where the RH drops below 40%, but most surface fuels will not be receptive.

On northern aspects, 1hr and 10hr dead fuels remain unavailable to carry fire.

Energy Release Component: general trend for both Branches indicates ERC is trending up. This brings ERCs to slightly above average for this time of year.

FIRE BEHAVIOR SPECIFIC:

BRANCH I and II:

Fuels continue to have elevated fuel moistures which will lead to minimal fire activity expected today with little to no perimeter growth. Areas of heavy dead and downed fuels will continue to consume along with ground fire in the duff. Burning standing dead trees will continue to burn creating aerial hazards. Keep an eye out on areas where burning material rolling down slope can cross underslung lines. Even though these spot fires may not spread with the high fuel moistures there is a possibility as we continue in this drying trend that they could spread to surrounding fuels. Also pay attention to trees with fire in the tops as they can send spot fires across your lines.

Initial Attack: In the event resources respond to a new start, recognize that fuels and topography may be different than areas you have previously worked in.

AIR OPERATIONS: Low clouds and fog in morning, becoming sunny the remainder of the day. Inversion lifting around 1100 hrs.

SAFETY

Continue to pay attention to roll-outs on steep slopes. Potential for fire weakened trees and snags hazards still exists.

SAFETY MESSAGE

7 September 2023

INCIDENT: UMPQUA FIRES

OPERATIONAL PERIOD: 0700-1900

TOPICS:

SITUATIONAL AWARENESS

Developing and maintaining situational awareness is a three-step process that includes:

1. Perception: Gathering information about what is happening around you.
2. Understanding: Making sense of the information you gather.
3. Prediction: Anticipating future events to prevent bad outcomes.

While situational awareness is the foundation for good decision-making, it is not flawless. Unexpected and novel events happen, even to the most experienced responders.

Wildland firefighting is often physically demanding work performed over extended periods of time. Lack of sleep and hydration, coupled with smoke inhalation, can lead to mental fatigue, and can decrease situational awareness.

Not recognizing the hazards, being unfamiliar with local fuels and fuel conditions, or not understanding the plan will lead to a lack of situational awareness. You don't know what you don't know.

Pay attention to your environment, ask for a good briefing, and make sure you understand the intent. Recognize hazards, communicate them and avoid or remove them.

Every day on a fire is a learning day.

Don't stand too close to guys that are always bandaged up.

SAFETY OFFICERS: Jack Cates, Troy Corn, Taija Corso, Richard McConnell

Deliberate Risk Assessment-Hazard Summary

7 SEPT 2023

Hazard	Mitigation	Post Risk
Extraction Time	Identify medivac sites and helispots. Initiate ground transport to accident site for transport capability. Identify EMT/EMTP from resources assigned to division. Provide line-qualified paramedics to each division as available. Review IWI protocol to ensure familiarity. Consider Short Haul if conditions dictate. Utilize agency, national guard and civilian medivac as treatment/timing dictates. Evaluate ongoing need for repositioning medical personnel. Provide dust abatement on Helispots as needed.	HIGH
Aircraft	Utilize Air Attack. Ensure all resources are a safe distance from all bucket and retardant drops. Establish LCES. Utilize air to ground primary for fixed wing and bucket work as needed. Reference IRPG (Safe aircraft operations pg. 61-62). Ensure IA resources have coordination with unassigned local air resources to provide deconfliction.	HIGH
Hazard Trees	Use avoidance to limit exposure time. Fall ahead to avoid exposure. Use qualified fallers or alternate methods if needed. Conduct on-going risk analysis of all work areas. Follow Hazard Tree Safety Guidelines (IRPG page 20-21).	HIGH
Heavy Equipment	Post lookouts around equipment work areas. Establish communications with equipment boss and operator. Do not work down-slope from equipment. Follow agency guidelines for chipping operations.	HIGH
Physical Factors	Maintain hydration schedule. Closely monitor work rate and implement rest periods. Maintain nutrition. Ensure adequate work/rest.	MODERATE
Fire Behavior/Weather	Be aware of burn windows and weather impacts and min/max RH for flashy fuels/local conditions. Report changes to FBAN and IMET. Establish MAP for disengagement to provide for an orderly retreat if there is a lack of safety zones. Have a plan for disengagement that establishes a designated meeting point and maintains personnel accountability.	MODERATE
Steep Terrain/Gravity	Establish LCES. Do not work crews above or below each other. Post lookouts for rolling material. Watch footing in loose soil, rock and around vegetation. Do not work below heavy equipment. Scout and identify travel routes.	MODERATE
Transportation	Sign all incident roads that provide access to divisions. Provide daily updated travel plan maps. Practice defensive driving. In local communities obey the posted speed limits and follow school zone restrictions. Use reader boards to provide advanced warning and control entry to base camp as needed. Identify and evaluate contingency and alternate escape and travel routes. Provide dust abatement and grading as needed. Provide advanced scouting for transport access and bridge weight restrictions. Maintain awareness of logging haul routes.	MODERATE
Unburned Fuels/Firing Ops	Maintain awareness fuel dryness levels. Establish LCES. Ensure management action points are implemented and followed. Weather updates as needed during burning operations. Locate indirect firelines to minimize unburned fuels. Follow Interagency Ignition Guide. Ensure communications between all firing operations. Establish road security at all firing sites. Follow approved firing plan for unburned fuels. If utilizing aerial ignitions, make sure firing plan is in place, communicated to, and understood by all resources. Utilize separate Air to Ground frequencies for operations as appropriate.	MODERATE
Environmental Factors	Assign medical personnel to camp. Assess for known allergies and report to medical personnel. Obtain Bee Bopper/wasp spray and yellow jacket traps. Maintain an awareness of wildlife and poison oak. Identify and report allergies through your chain of command. Work with READs and GISS to evaluate and identify mineshafts. Avoid, flag and communicate locations of mineshafts. Provide visqueen for rainfall protection.	MODERATE
Structure Protection	Review structure protection plan and ground truth whether defensible. Identify and report compromised service poles and maintain one span avoidance area. Identify downed lines. Treat all powerlines as live. Identify and avoid vehicles, tires, propane tanks, gas tanks and heavy fuels concentrations.	MODERATE
Communication	Evaluate dead zones prior to engagement. Utilize human repeaters as needed. Ensure accountability of resources in problem areas. Spiking resources must have communication coverage.	LOW
Viral Transmission Mitigations, Communicable Disease	Maintain awareness of health and perform self-checks. Report and isolate if not feeling well. Use remote briefings, spike camps and logistical layouts that provide for social-distancing as necessary. Establish liaison with Lane County Public Health.	LOW
Public Interaction	Implement area and road closures as necessary. Maintain a lookout for hunters in and out of closure areas. Maintain awareness of evacuation areas and provide accurate information dissemination. Maintain awareness of hunters and holiday recreation.	LOW
Initial Attack	Ensure identified IA resources are briefed of expectations and ensure communication plan is provided. Ensure resources are briefed on IA command structure. Provide identified crews with area maps.	LOW

Resource Advisor Message

Objectives - The objective of the fire suppression is to repair areas disturbed by fire suppression activities into a condition that does not negatively affect natural and cultural resources and will not create excessive erosion on the landscape. Without compromising public and firefighter safety.

- Reduce the potential for soil erosion and sedimentation
- Reduce the visual impacts of fire line as well other suppression activities when feasible
- Repair roads and drainage structures to a functioning condition
- Protect natural and cultural resources from additional potential damage

Critical Guidelines

Back-haul all trash, un-needed flagging and signs. Please leave safety flagging in place.

On Firelines, waterbars should be installed as described below, fire line covered with slash, and entrances blocked.

Water Bars

Fire line Gradient (% slope)	Distance Between Waterbars ^(A) (feet)
0 to 10	100 ft
10 to 20	75 ft
21 to 40	50 ft
>40% ^(B)	25 ^(B)

- **DEPTH AND WIDTH:** Waterbars need to be cut into surface, do not simply push up soil.
 - Waterbar depths for **dozer lines** should be at least 6 inches; total height from bottom of ditch to the top of the waterbar should average at least 18 inches and not exceed 24 inches.
 - Waterbar depths for **hand lines** should be at least 4 inches; total height from bottom of ditch to top of waterbar should average at least 8 inches and not exceed 12 inches.

Human Resources Message

September 7, 2023

OUCH!

THAT STEREOTYPE HURTS!!

Why is *Ouch!* important?

Staying silent in the face of demeaning comments, stereotypes or bias allows these attitudes and behaviors to thrive. Most people who want to speak up don't know how. So, we often just say nothing.

Here are six techniques for speaking up without blame or guilt:

- **Assume good intent and explain the impact:** *"I know you mean well, but that hurts"*
- **Ask a Question:** *"What do you mean?"*
- **Interrupt and Re-direct:** *"Let's not go there"*
- **Broaden to a Universal Human Behavior:** *"I think that applies to everyone"*
- **Make it Individual:** *"Are you speaking of someone in particular?"*
- **Or, Just Say "Ouch"**

Did you know: The King of Hearts is the only King without a mustache
