## INCIDENT OBJECTIVES (ICS 202)

<b>1. Incident Name:</b>	<b>2. Operational Period: DAY</b>	
UMPQUA FIRES	Date/Time From: 09/12/2023 0700 TUE	Date/Time To: 09/12/2023 1900 TUE
<b>3. Objective(s):</b>		
<p>Control Objectives:</p> <ul style="list-style-type: none"> <li>• Identify, evaluate and reduce risks to firefighters and the public through the use of Deliberate Risk Assessment process.</li> <li>• Minimize acres burned and impacts to communities and infrastructure by utilizing the Incident Strategic Alignment Process (ISAP) to guide operations in the development of strategies and tactics to be implemented by resources on the Umpqua Fires.</li> <li>• Implement strategic actions that have the highest probability of success to mitigate adverse impacts to values at risk, including: <ul style="list-style-type: none"> <li>• Highway 138 corridor</li> <li>• Bohemia Mining District</li> <li>• Fairview Communication site</li> <li>• Chilcoot Repeater</li> <li>• Private industrial and non-industrial timber land</li> <li>• Infrastructure &amp; Recreation</li> <li>• Protection of habitat for Threatened and Endangered Species</li> </ul> </li> </ul> <p>Management Objectives:</p> <ul style="list-style-type: none"> <li>• Treat each other with dignity and respect and act in a professional manner while on the fire and in the community.</li> <li>• Work closely with Agency Administrators and lead Resource Advisor to plan and implement actions that protect sensitive natural and cultural resources at risk from suppression actions.</li> <li>• Maintain and enhance relationships with cooperators, stakeholders, landowners, and communities by providing accurate and timely information.</li> <li>• Manage cost commensurate with values at risk and maintain fiscal accountability.</li> </ul>		
<b>4. Operational Period Command Emphasis:</b>		
<p>Implement strategies and tactics to achieve incident objectives with the least amount of risk practical and the highest probability of success. Our fires have the potential to escape existing control lines, ensure that mop-up standards are being met and adequate patrols are occurring. Ensure initial attack support readiness to support the local area with any additional fires.</p>		
<b>General Situational Awareness:</b>		
<p>Transition is a critical part of fire management and a watch-out situation. Ensure that you understand your chain of command and who you are working for. New leadership will be shadowing and assuming command at 2000 on 9/12. Continue to pay attention to drier weather and increased fire activity. Review the Task/Purpose/End State to ensure work assignments are aligned with leaders intent.</p>

## INPUTS

**WEATHER SUMMARY:** See Fire Weather Forecast for Details

**FUELS:**

Fuels in the fire area are primarily composed of *Timber Litter*, and *Timber Understory with moss/lichen present in most stands*. Mature conifer stands with western hemlock and Douglas fir are present, generally have heavy surface fuel loading. 30 to 50+ year old second growth conifer stands contain needle litter and some down woody debris. Brush and reproduction are present in areas with less dense canopies.

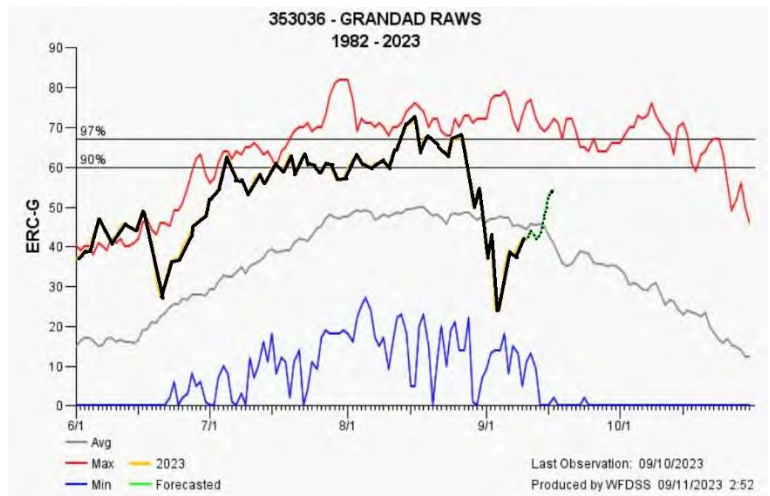

BRANCH I: Forecast for today-ERC 77<sup>th</sup> percentile. Yesterday's obs. 1hr-13%, 10hr-14%, 100hr-15%, 1000hr-18%

BRANCH II: Forecast for today-ERC 78<sup>th</sup> percentile. Yesterday's obs. 1hr-11%, 10hr-14%, 100hr-15%, 1000hr-18%

## OUTPUTS

**FIRE BEHAVIOR GENERAL:**

On shore flow will continue today bringing similar temperatures and humidity values as seen yesterday. This will keep fuel conditions mostly the same until the warming and drying returns Wednesday. Fire spread potential should remain mostly the same as what was seen yesterday. Creeping and smoldering in surface fuels will be the most common fire behavior in areas burning. The potential for mature timber stands to experience fire climbing single trees where lichen are present still exists, which could create spotting potential when near the fires edge. Lichen availability should remain more isolated due to higher humidity.

Fire behavior potential and fuel availability is expected to increase significantly in the second half of the week.

**FIRE BEHAVIOR SPECIFIC:**

**BRANCH I and II**

Surface fire will continue to be smoldering and creeping. Fire spread potential will still be largely dependent on location aspect and exposure/sheltering. Southern aspects may see areas where 1hr and 10hr fuels become available to carry fire.

Areas of heavy dead and downed fuels will continue to consume along with ground fire in stump holes and duff.

Standing trees with fire in them will continue to burn, contributing to overhead hazards.

Fires with black edge up to containment features should experience minimal fire behavior and isolated to interior portions of the fire.

**Initial Attack:** In the event resources respond to a new start, recognize that fuels, topography and conditions may be different than areas you have previously worked in.

**AIR OPERATIONS:** Clouds and fog in the morning then partly cloudy through the afternoon

## SAFETY

Ensure that today's actions are consistent with the overall strategy and account for the forecasted changes to weather and fire behavior.

## SAFETY MESSAGE

12 September 2023

INCIDENT: UMPQUA FIRES

OPERATIONAL PERIOD: 0700-1900

### TOPICS:

NW6 will shadow and transition at 2000 today. Transition is a time that can be marred by extreme success or failure. Ensure positive relationship-building and open lines of communications. Take a few extra minutes to get to know new personnel and provide a good briefing of actions taken up to the transition.

### **WARMER WEATHER/INCREASED FIRE BEHAVIOR**

Temperatures will be on the rise this week. Pay close attention to unburned pockets of fuel for rate of spread and spotting potential. Maintain awareness of fire behavior on new starts if supporting local IA. Many fatalities and injuries occur during weather pattern changes where increased fire behavior is observed in light fuels.

SAFETY OFFICERS: Jack Cates, Troy Corn, Taija Corso, Kris Baumgartner (T)

## Deliberate Risk Assessment-Hazard Summary 12 SEPT 2023

Hazard	Mitigation	Post Risk
Extraction Time	Identify medivac sites and helispots. Initiate ground transport to accident site for transport capability. Identify EMT/EMTP from resources assigned to division. Provide line-qualified paramedics to each division as available. Review IWI protocol to ensure familiarity. Consider Short Haul if conditions dictate. Utilize agency, national guard and civilian medivac as treatment/timing dictates. Evaluate ongoing need for repositioning medical personnel. Provide dust abatement on Helispots as needed.	HIGH
Aircraft	Utilize Air Attack. Ensure all resources are a safe distance from all bucket and retardant drops. Establish LCES. Utilize air to ground primary for fixed wing and bucket work as needed. Reference IRPG (Safe aircraft operations pg. 61-62). Ensure IA resources have coordination with unassigned local air resources to provide deconfliction.	HIGH
Hazard Trees	Use avoidance to limit exposure time. Fall ahead to avoid exposure. Use qualified fallers or alternate methods if needed. Conduct on-going risk analysis of all work areas. Follow Hazard Tree Safety Guidelines (IRPG page 20-21).	HIGH
Heavy Equipment	Post lookouts around equipment work areas. Establish communications with equipment boss and operator. Do not work down-slope from equipment. Follow agency guidelines for chipping operations.	HIGH
Physical Factors	Maintain hydration schedule. Closely monitor work rate and implement rest periods. Maintain nutrition. Ensure adequate work/rest.	MODERATE
Fire Behavior/Weather	Be aware of burn windows and weather impacts and min/max RH for flashy fuels/local conditions. Report changes to FBAN and IMET. Establish MAP for disengagement to provide for an orderly retreat if there is a lack of safety zones. Have a plan for disengagement that establishes a designated meeting point and maintains personnel accountability.	MODERATE
Steep Terrain/Gravity	Establish LCES. Do not work crews above or below each other. Post lookouts for rolling material. Watch footing in loose soil, rock and around vegetation. Do not work below heavy equipment. Scout and identify travel routes.	MODERATE
Transportation	Sign all incident roads that provide access to divisions. Provide daily updated travel plan maps. Practice defensive driving. In local communities obey the posted speed limits and follow school zone restrictions. Use reader boards to provide advanced warning and control entry to base camp as needed. Identify and evaluate contingency and alternate escape and travel routes. Provide dust abatement and grading as needed. Provide advanced scouting for transport access and bridge weight restrictions. Maintain awareness of logging haul routes.	MODERATE
Unburned Fuels/Firing Ops	Maintain awareness fuel dryness levels. Establish LCES. Ensure management action points are implemented and followed. Weather updates as needed during burning operations. Locate indirect firelines to minimize unburned fuels. Follow Interagency Ignition Guide. Ensure communications between all firing operations. Establish road security at all firing sites. Follow approved firing plan for unburned fuels. If utilizing aerial ignitions, make sure firing plan is in place, communicated to, and understood by all resources. Utilize separate Air to Ground frequencies for operations as appropriate.	MODERATE
Environmental Factors	Assign medical personnel to camp. Assess for known allergies and report to medical personnel. Obtain Bee Bopper/wasp spray and yellow jacket traps. Maintain an awareness of wildlife and poison oak. Identify and report allergies through your chain of command. Work with READs and GISS to evaluate and identify mineshafts. Avoid, flag and communicate locations of mineshafts. Provide visqueen for rainfall protection.	MODERATE
Structure Protection	Review structure protection plan and ground truth whether defensible. Identify and report compromised service poles and maintain one span avoidance area. Identify downed lines. Treat all powerlines as live. Identify and avoid vehicles, tires, propane tanks, gas tanks and heavy fuels concentrations.	MODERATE
Communication	Evaluate dead zones prior to engagement. Utilize human repeaters as needed. Ensure accountability of resources in problem areas. Spiking resources must have communication coverage.	LOW
Viral Transmission Mitigations, Communicable Disease	Maintain awareness of health and perform self-checks. Report and isolate if not feeling well. Use remote briefings, spike camps and logistical layouts that provide for social-distancing as necessary. Establish liaison with Lane County Public Health.	LOW
Public Interaction	Implement area and road closures as necessary. Maintain a lookout for hunters in and out of closure areas. Maintain awareness of evacuation areas and provide accurate information dissemination. Maintain awareness of hunters within and adjacent to the perimeter.	LOW
Initial Attack	Ensure identified IA resources are briefed of expectations and ensure communication plan is provided. Ensure resources are briefed on IA command structure. Provide identified crews with area maps.	LOW

## Resource Advisor Message

Objectives - The objective of the fire suppression is to repair areas disturbed by fire suppression activities into a condition that does not negatively affect natural and cultural resources and will not create excessive erosion on the landscape. Without compromising public and firefighter safety.

- Reduce the potential for soil erosion and sedimentation
- Reduce the visual impacts of fire line as well other suppression activities when feasible
- Repair roads and drainage structures to a functioning condition
- Protect natural and cultural resources from additional potential damage

### Critical Guidelines

**Back-haul** all trash, un-needed flagging and signs. Please leave safety flagging in place.

**On Firelines, waterbars** should be installed as described below, fire line covered with slash, and entrances blocked.

### Water Bars

Fire line Gradient (% slope)	Distance Between Waterbars <sup>(A)</sup> (feet)
0 to 10	100 ft
10 to 20	75 ft
21 to 40	50 ft
>40% <sup>(B)</sup>	25 <sup>(B)</sup>

- **DEPTH AND WIDTH:** Waterbars need to be cut into surface, do not simply push up soil.
  - Waterbar depths for **dozer lines** should be at least 6 inches; total height from bottom of ditch to the top of the waterbar should average at least 18 inches and not exceed 24 inches.
  - Waterbar depths for **hand lines** should be at least 4 inches; total height from bottom of ditch to top of waterbar should average at least 8 inches and not exceed 12 inches.
