Comments /notes on tonight's mission and this interpretation: Lookout Some growth to the heat perimeter was mapped, mostly in the Lookout Creek and McRae Creek drainages, where intense heat was observed along the northwestern perimeter. Some intense heat was also mapped in the upper slopes of the County Creek drainage. Scattered heat was mapped in most of the northern and eastern interior, with isolated heat mapped on the south of Lookout Mountain. Horse Creek No change to perimeter, but some intense heat was mapped along the northern edge in section 20, and scattered heat remains throughout most of the interior Pothole No change to perimeter, but scattered heat remains throughout parts of the interior
