FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 51	TYPE OF FIRE: Wildfire
FIRE NAME: Lookout/Bedrock/Horse Creek/Pothole/Pete's Lake	OPERATIONAL PERIOD: Monday, 02 October 2023
DATE ISSUED: 01 October 2023	TIME ISSUED: 2000 Hours
UNIT: Willamette NF, OR-WIF	SIGNED: Forrest Ownbey /s/ <i>Forrest Ownbey</i> – FBAN

INPUTS

WEATHER SUMMARY: See Fire Weather Forecast for Details

Persistent moist and cool weather conditions, scatter precipitation and light winds. Excellent humidity recovery.

FUELS:

Fuels in the fire area consist of Timber Litter (TL5) and Timber Understory (TU5) and lichen in the canopy. The Willamette National Forest and area has received approximately one inch of precipitation at the end of September. Live fuel moisture levels are good and resistant to contributing to fire spread. ERC's are well below the 90th percentile.

OUTPUTS

FIRE BEHAVIOR GENERAL:

Gravity and steep terrain creates potential for rolling material, fuel moisture content is high and do not create a receptive fuel. Primary fire activity will be smoldering in duff, stumpholes and under dense canopy cover.

- Grass – FM 2 (Timber grass / understory)
 - Rate of Spread – 1 to 3 chains per hour possible with flame lengths up to 1 foot.
- Brush – FM 5 (Shrub fuel type)
 - Rate of Spread – 2 to 4 chains per hour possible with flame lengths up to 2 feet.
- Timber – TU5 & TL5 (Timber Understory, Timber Litter)
 - Rate of Spread – 2 to 4 chains per hour possible with flame lengths up to 4 feet.

PIG 5-15% Spotting Distance .0 miles Torching Not Likely Uphill Crown Not Likely
 Fire behavior predictions are for the hottest and driest period of the day, gusts could increase fire behavior rates.

FIRE BEHAVIOR SPECIFIC:

Petes Lake & Lookout Fire: Fuels will stall in recovery with more precipitation. Expect to see smoldering of stumpholes, duff and heavy fuels.

Bedrock, Pothole and Horse Creek Fire: Fuel drying gained yesterday will be reversed with today's precipitation. Smoldering of protected fuels will be the excitement for fire activity.

IA: Conditions exist for slow moving fire spread with flame lengths that direct attack should be effective.

AIR OPERATIONS:

Chance of some clouds and fog but should have opportunities to fly.

SAFETY

Identify the unexpected hazards and be sure to communicate to adjacent resources. Look up, down and around you never know what you might see.

Resource Advisor Message - Lookout and Bedrock Fires

Joe Doerr, Lead READ, 541-912-4750 joseph.doerr@usda.gov; James Rudisill, Danger Tree Lead READ, 541-505-4773 Thomas.Rudisill@usda.gov

With rain coming take a look at the pumps and any fuel storage. Please ensure containment trays are empty, with fresh pads. Use visqueen, p-cord to make a tent over the pump and fuel where possible. Driving around please look for plugged culvert and ditches, and make sure water can flow even if you can't do a full repair.

Engineering and Roads

- Do not track heavy equipment on paved roads without the proper mitigations (ie. street grousers, rubber mats, etc.).
- If any road issues or concerns are encountered, please contact a REAF.

Dozer Lines

- Please work with Resource Advisors to clear proposed dozer lines.
- Please minimize the depth of the dozer line to the least extent required to meet objectives. Deep cuts are expensive, time consuming, and difficult to repair.

Heritage & Cultural

All cultural resources and human remains are protected by law. **Leave them in place- no collecting.** Call Resource Advisor if cultural resource like arrowheads, flakes/chips, or historic artifacts like cans & bottles are found and they will investigate.

Noxious Weeds

WEED WASH STATION:

- The Weed Wash stations are operational and located at Lookout Staging (Rock Quarry) and Lookout ICP
- Please use the weed wash upon arrival at the incident, and during demob
- Avoid the following weed: Slender False Brome and Spotted Knapweed

REDUCE THE SPREAD: Brush off packs & boots (especially laces) before leaving fire camp.

Tree Felling Operations

Please keep equipment on road surface to the greatest extent possible

Log Processing:

- Utilize existing openings and landings for decking, ditch lines/roadside is acceptable
- Process trees down to a 6" top (small end diameter). Use remaining for firewood logs, rehab, or chip
- Preferred Log Lengths (maximize length whenever possible): 41 foot Max – 17 foot Min
- 2' increments below 41', keeping logs as long as possible (41', 39', 37', etc....) Process unburnt trees on the unburnt side of the fireline. Process burnt trees on the burnt side of the fireline.
- Keep processed slash and tops out of decks and off roads
- If possible, sort decks by species and log lengths

Snags and Hazard Trees:

Old growth is a key value. Limit snagging to operational needs & limit bucking to retain long bowls of large felled trees or snags.

Water Quality and Fisheries

AERIAL DIPPING:

- Aerial dipping should only occur at approved dip sites. Blue River Res. has a use restriction to facilitate dipping. Check with your REAF for approval of dipping sites.
- Be sure to wash buckets when new aerial resources arrive at the fire, when switching dips sites, or when returning to the fire from off forest.

WATER DRAFTING:

- Limited Drafting is available at the bridge across Lookout Creek on the 1506 road in section 28. Check with the REAF for additional drafting locations as needed.
- Utilize fish screens when in fish bearing waterbodies (REAFs have these available).
- Maintain sufficient flow as to not dewater downstream reaches
- Utilize splash pans and absorbent pads. REAFs will assist if given the location.

CHIPPING STANDARDS:

- Provide a 30- foot buffer of no chipping at water crossings or culverts.
- Do not place chips into road ditch.
- Do not chip onto a steep slope where chips will slide back into the ditch.
- Broadcast chipped material, ensuring that chips are no more than 4" deep.

Cold Stress Card

FROSTBITE

What happens to the body:

Freezing in deep layers of skin and tissue; pale, waxy-white skin color; skin becomes hard and numb; usually affects fingers, hands, toes, feet, ears, and nose.

What to do: (land temperatures)

- Move the person to a warm, dry area. Don't leave the person alone.
- Remove wet or tight clothing that may cut off blood flow to the affected area.
- Do not rub the affected area because rubbing damages the skin and tissue.
- Gently place the affected area in a warm water bath (105°) and monitor the water temperature to slowly warm the tissue. Don't pour warm water directly on the affected area because it will warm the tissue too fast, causing tissue damage. Warming takes 25-40 minutes.
- After the affected area has been warmed, it may become puffy and blister. The affected area may have a burning feeling or numbness. When normal feeling, movement, and skin color have returned, the affected area should be dried and wrapped to keep it warm.
- Note: If there is a chance the affected area may get cold again, do not warm the skin. If the skin is warmed and then becomes cold again, it will cause severe tissue damage.
- Seek medical attention as soon as possible.

HYPOTHERMIA - (Medical Emergency)

What happens to the body:

Normal body temperature (98.6°F/37°C); drops to or below 95°F/35°C; fatigue or drowsiness; uncontrolled shivering, cool, bluish skin; slurred speech; clumsy movements; irritable, irrational, or confused behavior.

What to do: (land temperatures)

- Call for emergency help (ambulance or 911).
- Move the person to a warm, dry area. Don't leave the person alone.
- Remove wet clothing and replace with warm, dry clothing or wrap the person in blankets.
- Have the person drink warm, sweet drinks (sugar water or sports-type drinks) if he is alert. **Avoid drinks with caffeine** (coffee, tea, or hot chocolate) **or alcohol**.
- Have the person move his arms and legs to create muscle heat. If he is unable to do this, place warm bottles or hot packs in the armpits, groin, neck, and head areas. Do not rub the person's body or place him in a warm water bath. This may stop his heart.

What to do: (water temperatures)

- Call for emergency help (ambulance or 911). Body heat is lost up to 25 times faster in water.
- Do not remove any clothing. Button, buckle, zip, and tighten any collars, cuffs, shoes, and hoods because the layer of trapped water closest to the body provides a layer of insulation that slows the loss of heat. Keep the head out of the water and put on a hat or hood.
- Get out of the water as quickly as possible or climb on anything floating. Do not attempt to swim unless a floating object or another person can be reached because swimming or other physical activity uses body heat and reduces survival time by about 50 percent.
- If getting out of the water is not possible, wait quietly and conserve body heat by folding arms across the chest, keeping thighs together, bending knees, and crossing ankles. If another person is in the water, huddle together with chests held close.

CONGELACION PARCIAL

Que le sucede al cuerpo:

La piel y los tejidos se congelan en capas profundas; piel pálida del color de cera blanca; la piel se vuelve dura y entumecida. Por lo general, afecta los dedos, las manos, los dedos de los pies, los pies, las orejas, y la nariz.

Que se debe hacer: (temperaturas en tierra)

- Mueva la persona a un lugar caliente y seco. No deje a la persona sola.
- Remueva cualquier ropa mojada o apretada que pueda cortar la circulación de sangre al área afectada.
- **NO frote** el área afectada porque causa daño a la piel y a los tejidos.
- Suavemente ponga el área en agua tibia (105 °F) y observe la temperatura del agua para calentar los tejidos **gradualmente**. NO vacíe agua tibia directamente sobre el área afectada porque esto calentará los tejidos demasiado rápido causando daño a los tejidos. El calentamiento toma de 25 a 40 minutos.
- Después de ser calentada, el área afectada se puede hinchar y ampollar. En el área afectada se puede sentir una sensación de quemazón o entumecimiento. Cuando regrese la sensación normal, movimiento, y el color de la piel, se debe secar el área afectada y envolverla para mantenerla cálida.
- **Nota:** Si hay posibilidad de que el área afectada se enfríe otra vez, no caliente la piel. Si la piel se calienta y se enfría otra vez, puede causar daño más severo a los tejidos.
- Busque atención médica lo antes posible.

HIPOTERMIA - (Emergencia Médica)

Que le sucede al cuerpo:

La temperatura normal del cuerpo (98.7 °F/37°C) baja a menos de 95 °F/35°C; fatiga o somnolencia; se tiembla inconscientemente; piel fría y azulada; arrastra las palabras cuando habla; movimientos torpes; comportamiento irritable, irracional, o confuso.

Que se debe hacer: (temperaturas en tierra)

- Llame por ayuda inmediatamente (ambulancia o al 911).
- Mueva la persona a un lugar caliente y seco. No deje a la persona sola.
- Remueva cualquier ropa mojada y reponga con ropa cálida y seca o envuelva la persona en mantas.
- Haga que la persona tome bebidas calientes y dulces (agua dulce o bebidas para deportes) si la persona está alerta. **Evite bebidas que contienen cafeína** (café, té, o chocolate caliente) o **alcohol**.
- Haga que la persona mueva sus brazos y pies para crear calentamiento de los músculos. Si la persona no se puede mover, ponga botellas o paquetes calientes en las axilas, la ingle, el cuello, y la cabeza. **No frote** el cuerpo de la persona o ponga la persona en un baño de agua caliente. Esto puede pararle el corazón.
- **Que se debe hacer: (temperaturas en agua)**
- Llame por ayuda inmediatamente (ambulancia o 911). El calor del cuerpo se pierde 25 veces más rápido en el agua.
- **No remueva la ropa.** Abotone, hebille, cierre, y ajuste cuellos, puños, zapatos, y capuchas porque la capa de agua atrapada cerca del cuerpo provee una capa de aislamiento que retarda la pérdida de calor. Mantenga la cabeza fuera del agua y pongase un sombrero o una capucha.
- Salga del agua lo antes posible o súbbase a cualquier objeto flotante. **No intente nadar.** a menos que un objeto flotante u otra persona esté próxima porque nadar u otra actividad física usa el calor del cuerpo y reduce el tiempo de sobrevivencia un cincuenta por ciento (50%).
- Si salir del agua no es posible, espere quietamente y conserve el calor del cuerpo cruzando los brazos, manteniendo los muslos juntos, doblando las rodillas, y cruzando los tobillos. Si hay otra persona en el agua, agrúpese pecho a pecho.
