WEATHER SUMMARY

Maximum temp: 83 for day shift; Minimum temp: 52 for night shift.
Relative humidity (min): 18% for day shift; RH (max) 65-75% for night shift.
Winds: west 10-20 mph, gusts to 28 mph for day shift; west 14-18, decreasing to 6-12, then nnw 5-9.

OUTPUTS

FIRE BEHAVIOR

GENERAL: the primary feature driving the fire is the Columbia River and its interaction with the topography within and adjacent to the fire. Gusty westerly winds are common in the foothills and accelerate when combined with the daily diurnal flow to higher terrain to the north and deep north-south oriented drainages. Fine fuels dominate the fire area and are quick to respond to changes in relative humidity and wind. Patchy oak savannah is also present within the fire perimeter.

FIRE BEHAVIOR BY FUEL MODE

Fuel Type	Day (10-20 mph winds)		Night (after Midnight)	
	Flame Length	Rate of Spread	Flame Length	Rate of Spread
Short Grass (GR1)	2 feet	20 ch/hr	1 foot	6 ch/hr
Grass-Shrub (GS1)	5 feet	40 ch/hr	1 foot	4 ch/hr
Grass-Shrub (GS2)	8 feet	65 ch/hr	2 feet	8 ch/hr

Haines: 4 day; 3 night.

Probability of Ignition: 85% day, 20% night.

Expected Fine Dead Fuel Moisture: 3-4% day, 12% night (*moisture of extinction in grass is 15% FDFM*)

SPECIFIC:

DAY

All divisions: Excellent overnight humidity recovery above 1800 feet will provide opportunity to assess and take action on the fire area post frontal passage, particularly the north half of the fire. Any relief will be short lived as humidity value drop back into the teens in the early afternoon. Watch the channeling effect of wind and drainage alignment, particularly on the west flank of the fire in the Rock Creek Drainage and along Harrison Ridge.

EVENING

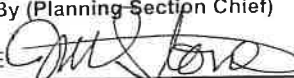

Moderate humidity recovery throughout the fire area will allow for direct attack throughout the shift.

AIR OPERATIONS: No adverse impacts anticipated.

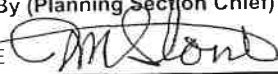

SAFETY

Although the primary fuel hazards in the fire area have been grass/brush, be vigilant for fire weakened trees in the oak savannah patches.

HEALTH AND SAFETY MESSAGE
SAFETY starts with YOU

INCIDENT: Newell Road Fire DATE: 7/25/23 Day and Night Operations

Major Hazards and Risks: DRIVING, STEEP TERRAIN, ACTIVE FIRE BEHAVIOR, AIRCRAFT AND HEAVY EQUIPMENT OPERATIONS,

Fire Order of the Day – Give Clear Instructions And Be Sure They Are Understood

Driving, both on the fire and in camp. The roads vary from state highway to two track/jeep trail in form. The key to success is to drive appropriately for the conditions. The layout of ICP and base camp allows for a lot of mixed pedestrian and vehicle interaction. Drive **SLOWLY** and cautiously in camp and out on the fireline! The Quote of the day that may help avoid a potential vehicle accident is, **“Driving Slower is Faster”**

The potential for active fire behavior. As mentioned previously in the briefings, the potential for active fire behavior still exists; this could result in new spot fires occurring. Dealing with fast growing spot fires is just another form of initial attack. Always keep up your situational awareness and practice your L.C.E.S.

Interior work is occurring. As secured fire lines are starting to, or continuing to be mopped up, situational awareness is still needed in the form of looking up, down and around for hazards in your work environment. **Keep your SA up at all times.**

DO YOU KNOW YOUR PART IN A MEDICAL RESPONSE? KNOW WHERE HELP IS COMING FROM? CONSULT THE IAP MEDICAL PLAN, REVIEW IT AND THE MEDICAL INCIDENT REPORT AT THE START OF THE WORK SHIFT.

Remember, anyone who is involved in an accident, or comes across someone who is injured can start the Medical Plan process!!!

Watch Out Situation of the Day

5. UNINFORMED ON STRATEGY, TACTICS AND HAZARDS

POWERLINE SAFETY
SUMMARIZED FROM THE IRPG PAGE :

“Fire activity near high voltage electrical transmission lines can cause multiple hazards and electrocute or seriously injure firefighters. The line supervisor must be aware and communicate powerlines hazards to all resources.”

DOWN POWERLINE PROTOCOLS:

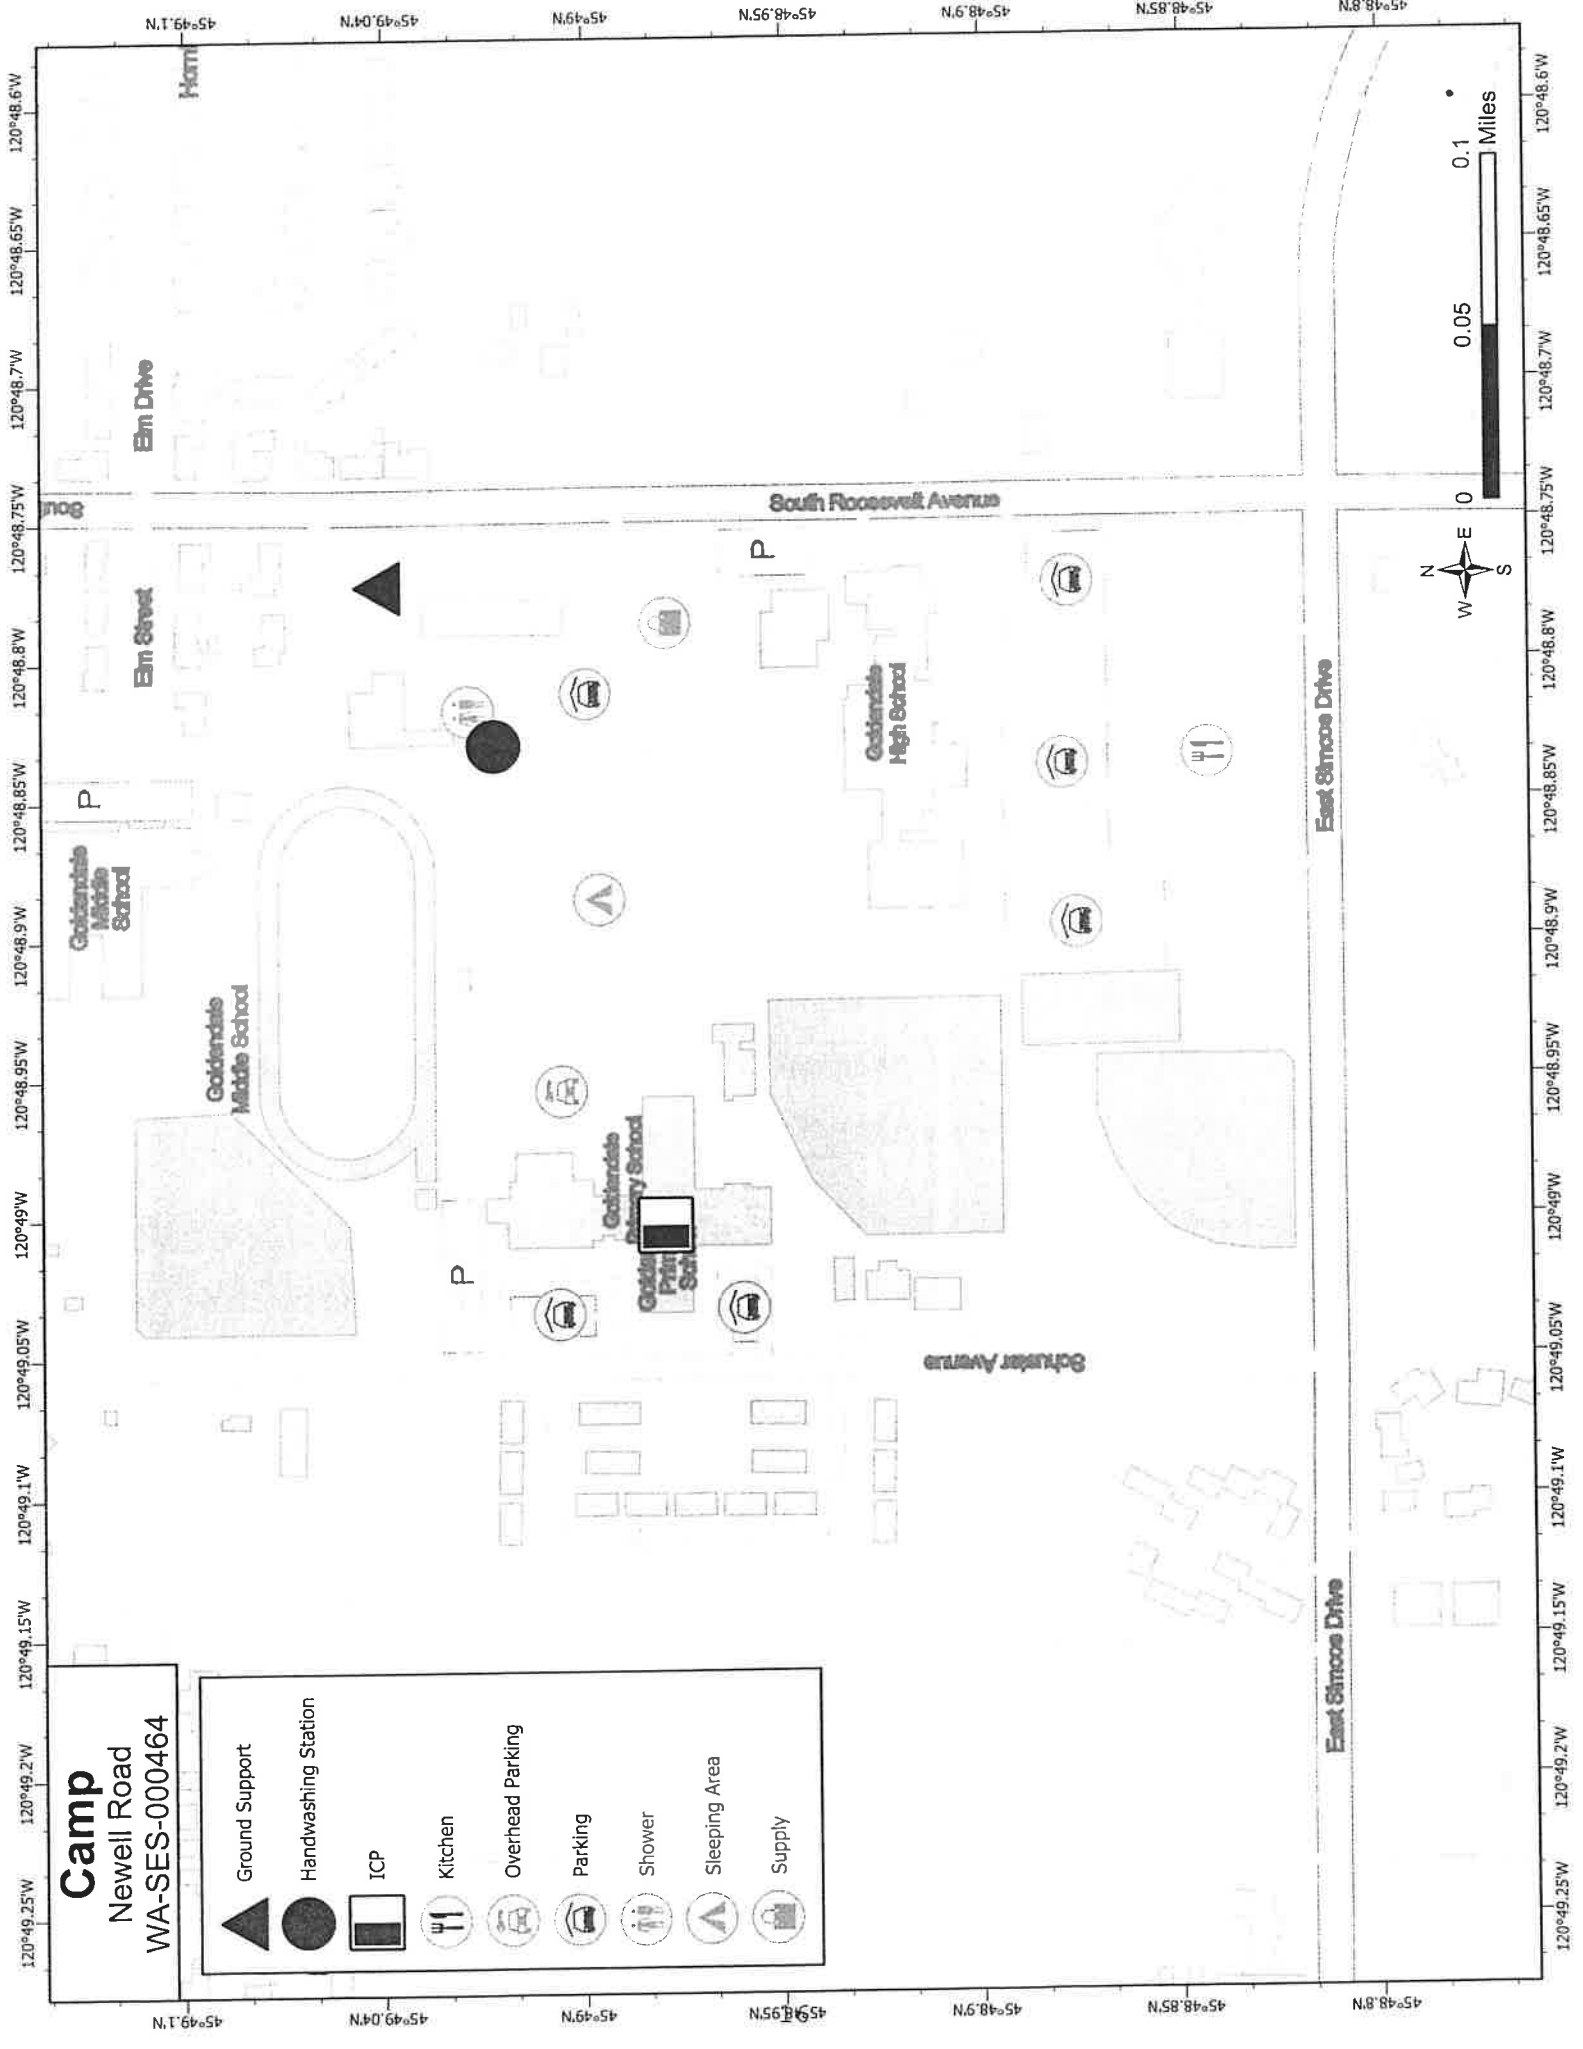

- Communicate.
- Identify.
- Isolate.
- Deny Entry.

Always treat downed powerlines as energized!

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

- 1. CONTACT COMMUNICATIONS / DISPATCH** (Verify correct frequency prior to starting report)
Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."
- 2. INCIDENT STATUS:** Provide incident summary (including number of patients) and command structure.
Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
