There is a very isolated chance of a thunderstorm developing from the cumulus build-up this afternoon. Winds on Monday will be light and variable through the morning hours (with a possible reprieve from the morning winds in camp) before the onshore push reaches the area in the late afternoon, bringing westerly winds of 10-15mph with gusts to 20mph and another chance of isolated thunderstorms. Thunderstorm and rain chances increase significantly by sunrise on Tuesday.

**WEATHER FORECAST: Today**

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 21	TYPE OF FIRE: Wildfire
FIRE NAME: Sourdough	OPERATIONAL PERIOD: 8/27/2023
DATE ISSUED: 8/26/2023	TIME ISSUED: 1900
UNIT: North Cascades National Park	SIGNED: <i>James Hampton</i> Jim Hampton FBAN

## INPUTS

### WEATHER SUMMARY

Maximum temp: 88-95 valleys, 75-80 ridges.  
Relative humidity: 23-32%.  
Winds: See accompanying weather forecast for wind information.

**HEAT ADVISORY IN EFFECT FROM NOON THIS AFTERNOON THROUGH 2000 SUNDAY**

## OUTPUTS

### FIRE BEHAVIOR

**FUELS:** Fuels in the fire area are primarily composed of Timber Litter (TL5), Timber with Understory (TU5), and Shrub (SH3). Primary tree species include mixed sizes of Douglas Fir, and hemlock, with scattered True Fir and cedar. Upper slopes are dominated by brush. Duff layers are generally shallow on the lower third of slopes with some deeper pockets on more heavily timbered benches.

### FIRE BEHAVIOR BY FUEL MODEL

Fuel Type	Head Spread Rate	Flame Length	Spot Distance
Heavy load timber/understory (TU5)	9 ch/hr.	6 feet	.1 mile
Heavy load timber Litter (TL5)	6 ch/hr.	3 feet	.1 mile
Shrub (SH3)	3 ch/hr.	2 feet	< .1 mile

Haines: 6; POI: 85% unshaded; 70% shaded; FDFM: 4 unshaded; 7 shaded; CWR: 0

### Today's Fire Behavior

Fine fuels today will be in the mid single digits. Surface fire with single and small group torching potential with short range spotting. Moderate probability of ignition at 70%. Poor overnight humidity recovery will extend burn period unless fuels are obscured by smoke. Instability could drastically alter expected fire behavior in a short time period this afternoon.

### Specific

Div. A and Z: Most of the surface fuels have been altered by fire or other activity greatly reducing fire potential. Conditions are favorable for holding these divisions.

Div. B: Continued movement to the northwest.

Div. Y: Surface fire potential in Sourdough Creek drainage as the partially burned pocket at the 3500 foot level continues to consolidate. Expect isolated torching, short range spotting and high probability of ignition on the west slope of Sourdough. Heat in the bottom third of Sourdough will be sheltered from afternoon winds, but embers from torching trees could carry to the east.

**AIR OPERATIONS:** Load capability of light aircraft may be impacted due to reduced air density.

### SAFETY

**Be heads up today! Several triggers lining up today for active fire potential.**

# 2023 Sourdough Fire READ Brief

## General Fire Operations

Confer with READs before:

- constructing any fireline
- siting helispots or spike camps
- applying fire retardant chemicals
- utilizing new dipsites

**Use of Fire Retardant and Heavy Equipment:** The application of fire retardant chemicals and use of any heavy equipment for fire suppression or suppression damage repair must be authorized in advance by the North Cascades National Park Complex Superintendent.

**Use of Approved Dipsites:** Ross Lake, Diablo Lake, Gorge Lake, Azure Lake, Sourdough Lake, Bouck Lake are currently the only approved dipsites on the incident. Contact READs before using any new dipsites.

**Fire Suppression in Wilderness:** Much of the Sourdough Fire is situated in the Stephen Mather Wilderness. Confer with READs as to Wilderness Resource Protection Measures.

## Prevent the Establishment and Spread of Invasive Species:

- Sanitize helicopter buckets and drafting gear upon arrival to the incident using a heated pressure washer and after dipping from off-incident dipsites.
- Avoid the introduction or spread of invasive weeds and aquatic species. Backcountry portions of the park are predominantly weed-free.
  - Weeds are present at ICP, along the Hwy 20 corridor, along the roads adjacent to Diablo and Ross Lakes, and at the outlet of Big Beaver valley.
    - Use boot brushes to treat boots, clothing, and equipment working in reed canarygrass areas in the lower Big Beaver valley.
    - Conduct visual inspections of helicopter cargo nets and other transported materials for invasive weed seed and propagules before transport to/from the fire.
    - Build and stage cargo loads in weed-free areas.

## Protect Water Quality

- Ensure that containment barriers and absorbent pads are installed correctly under pumps and jerry cans to prevent fuel contamination to waterways.

## Sensitive Species Habitat

- Avoid cutting large diameter trees and snags whenever possible.
- Air operations should avoid peregrine falcon activity areas in cliff bands along Gorge, Diablo, and Ross Lakes to the greatest degree possible. Refer to the Air Operations Avoidance Map for location specifics.
- As feasible, avoid disturbing ptarmigan populations along Sourdough Ridge. Gently shoo birds away from helispots in advance of helicopter landings. Do not separate ptarmigan chicks from their parents.
- Whitebark pine may be present on ridges. Avoid the cutting of any short 5-needle pines above 4500 ft.
- Fish screens are required on all engine and portable pump draft hoses.

**Sensitive cultural resource sites:** There are known sensitive archeological sites in the fire area, and there is a high likelihood that additional sites have not yet been identified. Avoid ground disturbance in open, flat areas and viewpoints as much as possible. Contact READs if you identify exposed artifacts.

**North Cascades National Park appreciates your support in the protection of sensitive resources!**

<b>Complacency, Gravity Hazards, Local Traffic, Driving, Powerlines, Heat Advisory, Bicycles on roadway</b>	
<b><u>Complacency</u></b>	
<ul style="list-style-type: none"><li>• Complacency – One of the standard fire orders stresses the importance of staying alert. Complacency and staying alert are not compatible. The hazards haven't gone away so we need to stay focused on them. It only takes a second of complacency for an accident to occur.</li></ul>	
<b><u>Driving</u></b>	
<ul style="list-style-type: none"><li>• Obey Speed Limits and always drive cautiously</li><li>• Be alert for other traffic and roadway hazards</li><li>• Slow down, keep right, and expect someone around every blind corner</li><li>• Be responsible while driving, always keep your situation awareness up</li></ul>

## Double Edge Sword of Ideals

Living by guiding ideals can give individuals the strength to persevere through periods of high stress, deprivation, and even great danger. However, as with many values, these ideals can create challenges. Therefore, we must understand how living by ideals can be both sources of strength and vulnerability.

Strength ←	Guiding Ideal	→ Vulnerability
Placing the welfare of others above one's own welfare.	<b>Selflessness</b>	Not seeking help for health problems because personal health is not a priority.
Commitment to accomplishing missions and protecting others.	<b>Loyalty</b>	Survivor guilt and complicated bereavement after loss of friends.
Toughness and ability to endure hardships without complaint.	<b>Stoicism</b>	Not acknowledging significant symptoms and suffering after returning home.
Following an internal moral compass to choose "right" over "wrong".	<b>Moral Code</b>	Feeling frustrated and betrayed when others fail to follow a moral code.
Becoming the most effective professional possible.	<b>Excellence</b>	Feeling ashamed of (denial or minimization) imperfections.
