<b>Date and Time Imagery Received by Interpreter:</b> 8/26/2023 2256 PDT		<b>Type of media for final product:</b> IRIN Daily Log, Shapefiles, File Geodatabase, KMZ, PDF Maps	
<b>Date and Time Products Delivered to Incident:</b> 8/27/2023 0100 PDT		<b>Digital files sent to:</b> NIFS and FTP (Address Below) /incident_specific_data/pacific_nw/2023_Incidents_Washington/2023_Sourdough_WANCP000262/IR/20230827	
<b>Comments / notes on tonight's mission and this interpretation:</b> Starting perimeter obtained from EventPolygon at 8/26/2023 2256 PDT.  Most heat observed in the northwest of the fire. Few scattered isolated heat within the southern third of the fire. Clouds obscured the east side of the fire.  Seems like the auto-generated INFORM triangle polygon is south of the fire in Gorge Lake and should be deleted from the EventPolygon.
