Comments / notes on tonight's mission and this interpretation: <p><i>Be advised: due to significant cloud cover, a large portion of the scan area was obscured. Unmapped heat may exist in these areas. See the cloud cover shapefile and map products for areas obscured by cloud cover.</i></p> <p>Very little perimeter growth was mapped, mostly in the western corner of the fire. A small amount of perimeter growth was mapped on the east side of the large spot fire to the NE of the main fire polygon. Scattered heat was evident throughout much of the fire area where the view was not obscured by cloud cover.</p>
