Comments / notes on tonight's mission and this interpretation:

Tonights imagery was great for accurate mapping of the heat sources.

The perimeter was expanded 112 acres on the very south end for containment lines and burnout in light fuels.

Most of the heats are found again in the timbered areas of the burnout in the southwest corner and just east of Cow Camp and were mapped as Scattered Heats. The rest of the fire shows much reduced heat and is mapped as isolated heats.
