

# Near-Term Fire Behavior

## Spring Creek

### 07/05 - 07/07

This area clouded out on IR

This Near-Term Analysis shows modeled fire spread over the next 3 days (07/05 – 07/07) without any suppression efforts, a barrier was used on Hwy 12. Ignition was the Intense heat from the IR delivered 07/05. Herbaceous and Woody fuel moistures were lowered to better match the current drought conditions. Weather from the Sand Dunes RAWS was used. If this analysis becomes unrepresentative or monsoon moisture and outflow winds move over the area it should be re-ran with updated conditions. Some areas were clouded out on IR last night.
