<b>Date and Time Products Delivered to Incident:</b> 10/20/2019 – 2400 (MDT)		<b>Digital files sent to: NIFC FTP @</b> /incident_specific_data/rocky_mtn/2019/CowCreek/IR/20191021	
<b>Comments /notes on tonight's mission and this interpretation:</b> I started with the previous IR perimeter: 20191019_0027_CowCreek_HeatPerimeter  There is cloud cover over everything except the southwest corner. There, the heat shows, possibly through light cloud cover. The two spots in the middle of the perimeter are definitely beneath cloud cover, but show through.  This product is just for your info, and is not an official indication of fire activity, since there is way too much cloud cover.  End – NA Acres Start – 785 Acres (area of shapefile) Growth – NA Acres  Questions, comments, please contact the IR interpreter via the info above.
